HOMEWARD MAIL FROM BOMBAY.
LATEST DATES.

BOMBAY, MAR. 23; CALCUTTA, MAR. 21; MADRAS, MAR. 21;
Per P. & O. Co.'s Str. BENGAL, *Captain W. B. Andrews.*

PASSENGERS:—

For London—Mr Trulock Hankin; Rev B Baring Gould; Mr W G Yarrow; Mr and Mrs Browne; Mr and Mrs Mackellar, child and infant; Miss Dods; Mr W Dods; Mr Veasey; Sir Thomas and Lady Thompson and infant; Mr and Mrs Blake: Rev and Mrs O D Watkins and family; Mrs Spencer; Mrs Cotton; Mr J Brown; Mrs Allen; Mr Arnott and 2 children; Miss Robb; Mr and Mrs Alston; Mr W Weston; and Mr J Mumford

For Brindisi—Mr W Craik; Sir Tatton Sykes; Lady Sykes; Miss Strong; Duke and Duchess of Montrose; Mr and Mrs W F Wright; Brig-Genl R C Stewart; Mr J F Finlay; Mr C E Wilkinson; Mr Higgens; Mr Tyringham; Miss Healy; Miss Gault; Dr Alice Marston; Dr J Henderson; Col and Mrs Street; Lieut-Col Aisiabie; Mr Moreton Frewin; Mr and Mrs E L F Cavendish; Mr B Peacock; Mr H E G Evans; Mr Phrao; and Capt Purvis

For Gibraltar—Mr Recano

For Suez—Mr G A Wallis Budge

The following passages have been engaged :—

s.s. Pekin, Captain A. Symons, 30th March, 1888.

For London—Hon Justice Prinsep; Mrs Prinsep; Mrs Knox Mr and Mrs Heywood; Mrs Miles and two children; Mr and Mrs Hobart, two children and inft; Surg-Maj and Mrs McKay and child; Mrs Lloyd Wynne; Mrs Little; Mr Wilson; Miss Stevenson; Mr G H Barnard; Mrs Corballis and infant; Rev and Mrs Osborne and child; Mrs Taylor and 2 children; Mr Allison; Mr J Mitchell; Mrs Hyde Edwards and two children; and Mrs Adams

For Brindisi—Mr Archer; Mr H H Macleod; Mr A W Chapman; Mr W Weston; Mr and Mrs Barry White; Mr C W Martin; Mr A S King; Mr Ashton; Mr L E Firth; Mr J Mackintosh; Mr Gallie; Mr J Sturrock; Lt W Steuart; Brig-Genl R C Steuart; and Mr D J Burbridge

For Marseilles—Mrs M C Jacob; Mrs E C Mouran and two daughters; Mr A Pointon; Mr F O S Read; Mr Moller; Mrs Heald and child; Miss Jordon, Mrs G E Howse and infant; Mr Plumer and son; Col and Mrs Brown and family; Mr J S Anderson; Mr Scott; Col and Mrs Fichell; Mr Parmenides; Mrs Adams; Lieut-Col C G Walter; Hon R Steel; and Col F E Wiggens

s.s. Clyde, Captain E M Edmond, 6th April, 1888.

For London—Mr and Mrs Paul Bird; Rev M Sullivan; Mrs Parker; Miss Holt; Mr W B Jackson; Rev Gilbert Karney; Mrs C Daniell; Miss Naden; Mr G F Paterson; Mr T R Booth; Col Jenkins; Mr and Mrs Macklenburgh and two children; Mrs S Cole; Mr and Mrs W E Cooper; Miss Macinnes; Miss Hargreaves; Mr and Mrs Gavin Jones and child; Miss Gavin Jones; Mr Ritchie; Miss Ritchie; Miss Hamilton; Mr McOlay; Miss Bromley; Mr E Tennant; Lord Ribbesdale; Mrs Jacob; Miss Beynon; Mr J F Finlay; Mrs Finch and child; Col and Mrs Wemyss and infant; Mr M Hughes; Major-Genl and Mrs Lyster; Mrs Bennett; Mrs W G Betham; Mr Hegt; Miss Lyall; Mr W Cook; Mr Rhind; Mrs Bradburg and child; Rev and Mrs Poole; Mr Faulds; Mr and Mrs Hope Johnson; Mrs Woodhouse; Col the Hon N G Lyttelton; and Miss Wortley

For Brindisi—Mrs MacGregor; Mrs Osborne; Mr H A Hormarjee; Dr and Mrs Jex Blake; Miss Jex Blake; Major and Mrs W H G Wyllie; Mr MacCow; Mr G Evans Gordon; Col H A Hammond; Mr H E Wright; Mr G Adams; Dr J Burgess; Mr A H Smith; Mr W G Nicholson; and Mr H S Beadon

For Suez—Count H G Lynar

The following is the list of passengers per Anchor Line s.s. Victoria, Commander W. Russell, which sailed on Saturday for Liverpool :—

Col and Mrs Miller; Miss Margaret Miller; Miss Elizabeth Miller, child and infant; Mrs Dobbs and infant; Mr and Mrs Horsley, two children and infant; Rev Dr and Mrs Shoolbred; Mrs Ramsey; Mrs Horton; Miss J M Small; Miss Small; Col, Mrs and Miss Forteath; Master A Forteath; Mrs Saunders; Miss Mary Saunders; Miss Josephine Saunders and infant; Miss Hutchins; Captain and Mrs Ringwood; Mrs Bearsley; Miss Queenie Bearsley; Miss Nora Bearsley; Mrs Michell, child and 3 infants; Rev Dr and Mrs Wherry; Miss Grace Wherry; Master William Wherry; Miss Lilian Wherry; Miss Minnie Wherry; Miss Annie Wherry; Master John Wherry; Master James Kelso; Miss M A Jerome; Mrs Tracy; Master Robert Tracy; and Miss Jennie Tracy

---

The following is a list of passengers per steamer Dorunda, which sailed from Madras to London on the 16th inst :—

From Colombo to London—Mr T Akitt and Mr C K Harcourt

For London—Rev and Mrs Hewlett; Capt and Mrs Burne; Capt and Mrs Sanders; Mr and Mrs Wolfe Murray and children; Mr and Mrs Kerr; Mr and Mrs Swainson; Mrs Millar and 2 children; Mr C Irwin; and Mr G B Wake

---

The following is a list of passengers per steamer Clan Macintosh, which sailed from Madras to London on the 17th inst :—

For London—Mr and Mrs E B Dawson and 2 children; Col Farm; Mrs Kilgour and 2 children; Mrs Abid and infant; Miss C Abid; Master Abid; Mr and Mrs R Lamb; Miss Lamb; Master Lamb; Mrs S Liddell; Miss Liddell; Masters C and R Liddell; Mr C H Godfrey; Dr and Mrs Busteed; and Mr J Lee Stewart

For Suez—Lieut-Col Shepherd

OUTWARD MAILS FROM EUROPE.
FROM LONDON, MARCH 2.
ARRIVED AT BOMBAY, MARCH 19.
Per P. & O. Co.'s Str. ASSAM, *Captain G. W. F. Browne.*

PASSENGERS:—

From London—Mr Bowen; Miss Pottinger; Mr C Collins; Mr and Mrs Dansey and infant; Mr Gribbin; Mr Armstrong; Mr Ralph; Mr Mahomed Meassen; and Mr Mackintosh

From Marseilles—Mr and Mrs Sivestre; Mr C Lynch: and Mr McNeill O'Reilly

From Brindisi—Mr F Baker; Mr Donald; Mrs Richey; Mr A Richey; Mr Arbuthnot; Capt Harries; Mr Narayana; Mr and Mrs Seva Ram and child; Mrs Hardevi; Mr Keoll; Mr Adams; and Mr Millard

From Aden—Lieut-Col Twenlow, R E

The following is the list of passengers per Italian mail steamer R. Rubattino, Captain G. Merello, which arrived on Monday from Genoa :—

From Genoa—Mr Kirk; Mrs Ariana Letizia, one friend and three children; Mr C Bernard; Mrs Bernard and two children; Miss F Paeton and four other ladies; Colonel Mathew; Mrs Mathew; Mr A M Burney; Mrs Wigley and child; Captain Alexander; Mrs Alexander; Captain White; Colonel A M Hunter; Mrs Mackay and daughter; Mr Nabibux and one friend; and Mr Ramazzotti and one gentleman

From Naples—Mr and Mrs Cuffe

LATEST TELEGRAMS.

THE SIKKIM EXPEDITION.

(FROM OUR OWN CORRESPONDENT.)

ALLAHABAD, MARCH 22.

A telegram, dated Camp Sedonchen, 20th March, says :—To-day we have actually come to close quarters with the Thibetans. After Colonel Graham had found by his reconnaissance of yesterday that a hostile force was barring the road, he took extra precautions to guard against a night-attack, but the enemy did not venture out. This morning a small force, consisting of 100 men of the Derbyshire Regiment, under Captain Wylly, and 100 Pioneers, under Colonel Bromhead, moved up the steep hill road towards the stockade, while Major Keith, with his two screw-guns, followed an hour later. It was a hard climb, but the troops were cheered by finding that the Thibetans had not deserted their position. During the night they had chosen an excellent point on the road to oppose us. On a steep wooded knoll they had built a stockade, some twenty yards long, which has could not be turned on the left flank, while th with had cut away the road itself on their right, ich has built a sungar of stones on the far side, nervous barring any advance in this direction, as the a lower- ran along the side of the *khud*. The Pio against under Colonel Bromhead, were leading, and went at the stockade in gallant style. Some 60 out the Thibetans were holding the position with 40 readers in support, some few hundred yards in the They fired from matchlocks, and shot arrows, supposed to be poisoned. They were cleared out of the stockade at the point of the bayonet, and the detachment of the Derbyshire then took the barricade on the road in flank from above.

Another despatch, dated Pedong, 22nd March, says :—The Thibetans held on stubbornly here even after the stockade was taken, their leader showing much bravery. He was shot dead, and then his men beat a hasty retreat. They were followed up along the road leading towards Lingtu, but soon disappeared. Their loss is estimated at twenty killed and wounded. Our casualties were very few, owing to the rapid rush made by the troops, who fired only some two hundred rounds altogether. Captain Lumsden, who advanced to the break in the road, was hit by a bullet in the arm, the ball passing through the flesh, but not touching the bone. One sepoy was also hit in the arm. The Thibetans were so poorly armed that they hurled down stones. Colonel Brom head was hit by one of these, and three or four sepoys suffered from contusions. A prisoner who was taken stated that the stockade was built two days ago. He added that the garrison of Lingtu was 200 strong, but 300 men are expected to arrive to-morrow, and 800 more are on their way from Chumbi. Colonel Graham pushed on as far as Garni, three miles further on, and 10,700 feet above the sea. Snow lay along the road, and the cold was severe. No further sign of the enemy was seen, but the track of wounded men could be followed by blood marks on the rocks. The Thibetans left their tents standing, and threw away their clothing and supplies along the road. Colonel Bromhead with 150 Pioneers holds Garni to-night, one hundred of the Derbyshire, under Captain Wylly, with Major Keith's two guns, remaining at Jeluk, below the stockade. We move against Lingtu itself early to-morrow morning.

Heads of Intelligence.

H. E. the Viceroy inspected the Calcutta Volunteers on Saturday, and Lady Dufferin presented the prizes.

Before the proceedings terminated, Colonel Chatterton asked her ladyship to accept a bracelet, the collective gift of every man and cadet on the rolls.

Lady Dufferin in a few graceful words tendered her acknowledgement.

The Viceroy is expected to reach Simla on the 9th of May.

Their Royal Highnesses the Duke and Duchess of Connaught left Bombay on Monday afternoon for Poona, en route to Mahableshwur.

Princess Margaret and Prince Arthur, the children of the Duke of Connaught, were among the passengers by the last mail.

The Sikkim Expedition had approached to within a short distance of Lingtu when the last news was received of it.

Onhe 21st a few shots were exchanged between a small reconnoitring party and the enemy.

Maharaja Holkar has placed the resources of his State at the disposal of Government for the defence of the country.

It is notified that the Bombay Government assemble at Mahableshwur on Wednesday April.

Sir Lepel Griffin is about to pr lough, and not to retire from th supposed.

The Syndicate of the Bom declined an offer of Mr. J das to found a prize wor and

standing camps for young and weakly soldiers at Dalhousie, Ranikhet and Chakrata.

The Madras Diocesan Conference, which has been recently sitting at Madras, has resolved on the appointment of a permanent Diocesan Council.

The Duke of Orleans has not gone with the Sikkim expedition, but is still out shooting in the Terai.

Mr. Jamsetjee Nusserwanjee Petit, a well-known Parsee resident of Bombay, died on Monday.

A new Masonic Hall has been opened at Calcutta.

H. M. S. Bacchante arrived in Bombay from Colombo on Monday.

OBITUARY.—Capt. D. Stewart, 2nd Battalion Seaforth Highlanders, at Bareilly.

General Summary.

At the hour of writing it is almost certain that the Sikkim expeditionary force has reached, stormed, and taken possession of the Lingtu Fort, which the Thibetan intruders, though repeatedly warned to evacuate, have so doggedly continued to hold. The last day of grace allowed them was Thursday, the 15th instant, and up to that date the British force remained quietly encamped at Pedong, which is so close to Lingtu, as the crow flies, that the latter place could with the aid of field glasses be seen distinctly in the early morning before the clouds covered the hills. On the eve of the expedition setting out on its final advance, a tardy message came in from the Rajah of Sikkim asking for delay with a view to his mediating with the Thibetans and thus settling the difficulty. However, the hour for such temporising had gone, as the most ample time had been allowed for the friendly intervention the Rajah now professed himself willing to make. Accordingly the order to advance was given at nine o'clock on the morning of Friday, the 16th instant. The column consisted of one hundred men of the Derbyshire Regiment and three hundred men of the 32nd Pioneers, together with two mountain guns under Major Keith, the whole being commanded by Colonel Graham. A reserve force of exactly the same strength remained at Pedong. The men started in excellent health and spirits, several days of toilsome marching being before them. The distances to be traversed were insignificant could a direct line have been followed; but with the zig-zag route, which is nothing more than a roughly cleared cutting through the jungle, again and again doubling upon itself, now ascending and next descending steep and rough hills, and constantly winding and twisting along precipitous mountain sides, only slow progress was possible, the difficulties of the way being increased by swollen streams, difficult transport, fever in the valleys, and snow and frost on the heights. At the very outset a violent thunderstorm rendered the way slippery and arduous. To give an idea of the difficulties encountered, it may be mentioned that the first day's march was only eight miles, but included first a descent of 2,700 feet and then a steady climb of over 5,000 feet. The transport mules proved to be fit and well, and up to latest advices have performed their trying work admirably, a fact which redounds to the credit of the Transport Department.

We need not follow each day's advance in detail; the above considerations sufficiently explain the shortness of the stages. On Monday, March 19th, the foot of the ridge on which the Lingtu Fort is situated was reached. The march from this point would be a steep ascent all way, there being a rise of no less than 5,000 ve miles. A reconnoitring party was the afternoon of the 19th, and after of about two miles the first trace as met with, the road being by large stones and felled wards further on and a he road a stockade of t ten feet high, ling the path at sharp angle. and for a ing in the while a from made ," s

casualties on our side. The Thibetan outpost numbered about fifty, and appeared to be armed with matchlocks, one man among them having a rifle. On the 20th an advance was made by a company of the Derbyshire and a company of the Pioneers, with the two guns, to clear the stockade, the remainder of the column remaining in camp, as a general advance was impossible until the road had been improved. At the hour of writing no further particulars are to hand.

Our men are now in an extremely cold climate, Lingtu being 12,617 feet above the sea level (nearly 2½ miles). The Thibetan force occupying Lingtu and who have to be "cleared out" are said to number 200 so-called regulars and 600 or 700 village levies. These men must be in a wretched state as the place is smothered in snow. The fort itself is said to consist only of a single wall of rough stone, some eight feet thick and sixteen feet high, built at right angles across the road which leads to the Jeylapla Pass and Thibet. This wall, writes a correspondent, "runs from the top of the hill to a precipitous declivity at its other end. At each extremity is a tower or bastion which is stated to be used as shelter for the garrison, for which purpose there exists also a building which looks like a stone hut, behind the wall. The road runs through a gateway, and the approaches are protected by two small sungars on the zig-zag ascent up the hill. The wall is loopholed, and the greater part of the garrison is believed to be armed with guns or rifles of sorts." It will thus be seen that from the mere point of view of assault and capture our work will be of no great difficulty. However, we have only to recall our disagreeable experiences in Upper Burmah to know that serious casualties may result from ambuscades and pot-shots from the jungle. Moreover, rumours have been afloat that the Thibetans and the unruly population of Sikkim intend to harrass our line of advance, and it has been deemed necessary to issue special orders warning our soldiers against drinking water at casual places for fear of its being poisoned. Meanwhile, the Rajah of Sikkim remains at Gantak, having evidently come to the conclusion that as our operations are avowedly against the Thibetan intruders and not against him personally his wisest course will be quietly to await the development of events.

How completely telegraphy is changing the conditions of social and political life is best seen, perhaps, on occasions of international rejoicing or sorrow. The celebration of the Queen's Jubilee is a good instance of the first; the services of mourning for the death of the Emperor William a better instance of the latter. We have still to wait for the printed accounts of the Emperor's death, but owing to the telegraph cables, the German and English communities all the world over were enabled to express their grief and regret simultaneously. The funeral service held in Berlin was, we are told, most touching in its simplicity, though the three men most intimately connected with the splendid career of the great Emperor —Prince Bismarck, Count Von Moltke, and the Emperor Frederick—were, through the strain and sorrow brought about by his death, unable to attend. In London the funeral service was performed in Westminster Abbey, and her Majesty the Queen made it her pious duty to be present. In all the English Colonies—and doubtless in all the German Colonies too —similar services of mourning were held on Friday. In Bombay the service was most impressive, and probably nothing grander has ever been witnessed in our Cathedral except, perhaps, the very different service last year in celebration of the Queen's fiftieth year of sovereignty. The Cathedral was densely crowded; the north transept being allotted to the ladies and gentlemen of the German community, and the German Consul occupying a most conspicuous place in the front of the procession. H. R. H. the Duchess of Connaught, in deep mourning, was escorted on either side by H. R. H. the Commander-in-Chief and his Excellency Lord Reay and Lady Reay. To say nothing of the general public who filled every available nook, the whole official world were present in full official dress. The members of Council, the Judges of the High Court, the officers of the Army and Navy, the chief men in all the civil departments, and no less than sixteen foreign Consuls, including the representatives of Turkey and Persia. The service, ich was chiefly musical, was conducted by Mylne, Bishop of Bombay, and the Rev. wyer Lewis, the Chaplain of the Cathedral, he musical portion of the ceremony under . Newton Mant was exceptionally grand. rvice lasted three-quarters of an hour, led a special prayer for the health of the new Emperor, Frederick III. During the day a mourning salute of ninety-one guns (the number of the late Emperor's years) was fired in all the chief military stations of the Empire.

The public, the press, and the police may all claim a well-merited triumph in the reversal by the High Court of Mr. Crawley-Boevey's severe sentence upon the police-sepoy Bhawoo Jivajee. He was, it will be remembered, sentenced to four months' rigorous imprisonment. We took up his case warmly, as a case of very great importance, both to the public and the police. He was released on bail in the first instance, and yesterday Mr. Justice Birdwood and Mr. Justice Parsons acquitted him of the offence of which he had been convicted, and ordered that he should be set at liberty. This is the view we have taken all along. The man acted in good faith on the orders issued by his superior officers, and the judges find, as we found, that he had reasonable grounds for doing what he did. But for the interest the public and the police force took in the matter, Bhawoo Jivajee would still be in jail, and it speaks volumes for the *esprit de corps* of the Bombay Police that they should have subscribed Rs. 1,300 to free an innocent comrade from prison. Under the circumstances the Government, we think, might very well pay the money; for, apart from the personal merits of the judges' decision, it is of great importance, for had not the magistrate's sentence been reversed all our police arrangements, based on the experience and practice of many years, would have been upset. As it is, everything will go on as before, and the police will, as heretofore, be protected in the proper execution of their difficult duties.

We have received from the Secretaries of the Bombay Presidency Association a strong protest addressed by that body to the Government of India against the enhancement of the salt tax. One paragraph will show the nature of the whole memorial:—"It must," we read, "be borne in mind that the mass of the consumers are poor, and that they chiefly belong to the rural and labouring classes who constitute the real backbone of the empire, and on whose toil and industry the annual land revenue of the country wholly depends. To lay on the shoulders of such classes, who already contribute 4½ per cent. on their daily salt out of their annual average pittance of Rs. 27 per head, and of whom nearly fifty millions go without one full meal a day, a further charge of another 1 per cent. on that income is, indeed, most burdensome." This, though we cannot accept the figures, is as a statement clear and definite. But the Hon. Sir Dinshaw Manockjee Petit was equally clear and emphatic when he spoke in the Supreme Legislative Council:—"I see," he said, "that an objection in some quarters has been raised against the increase in the salt tax of an additional duty of eight annas per maund; but if the figures on this question are gone into, it will be found that this increase would be as little felt by the masses as would the duty on petroleum." And, he continued, as this imposition would not at all affect the poor, "I have nothing to say against it being levied," Here we have Sir Dinshaw and the Bombay Presidency Association taking diametrically opposite views; and of the Presidency Association Sir Dinshaw Manockjee Petit continues to be the President! Surely there is a deadlock here. When the first President, Sir Jamsetjee Jejeebhoy, was unable to agree with the members of the Association about the wisdom of sending political advice to the English electors, he at once resigned. What steps do the members and their existing President mean to take now? The difficulty seems to be a Gordian knot that can only be cut in one way.

An appointment in the Judicial Department, which is notified in last week's *Government Gazette*, is worthy of notice in connection with the remarks we recently made as to the apparent determination of Government to recruit the higher grades of the Judicial Department from the senior ranks of Revenue Officers. Reference to the official history of services of *gazetted* officers shows that the officer appointed now to be a second grade Judge, without his name having even yet been entered as holding a substantive appointment in the graded list of judicial officers, was in March 1886 a revenue officer in the Revenue Department. The vacancy thus filled up occurred when the Hon. Mr. Parsons became confirmed as a Judge of the High Court last year, and the circumstances under which the appointment under notice has been made are interesting. The new second grade Judge acted as an Assistant Judge for about three and a half months in 1875, and then as Judicial Under-Secretary for a year and four months till 9th May 1877. It is a departmental rule of the Judicial Department (rule VII.) that "Pending re-appointment an officer

who has served in the Judicial Department will not be entitled to promotion in the Revenue Department, but may revert to a position in the Revenue branch similar to that which he occupied before he entered the Judicial Department." The officer we refer to withdrew his election to enter the Judicial Department, and returned to the Revenue Department about 1878, and was treated and promoted as a Revenue Officer until March 1886, when having made a fresh election in November 1885, to join the Judicial Department, he was made Judicial Assistant, the pay of which appointment is Rs. 1,400 a month, *over the heads of all the Assistant Judges who had remained in the department or had meanwhile joined it.* His previous election having been cancelled at his own request he has now, since his second election of 1885, actually performed the duties of Judicial Assistant only about nineteen months, and not two years, as stipulated in the Rule which we quoted on Wednesday. It may be added that it is not under that Rule, but under a Government Resolution of December 1878, that service as Judicial Under-Secretary and Judicial Assistant for two years (after election) is allowed to count for purposes of supersession, and that this Resolution does not appear to have been ever published in the *Gazette* as the Rules of 1873 were published. The vacant second grade Judgeship has thus been given to an officer who was a revenue officer of sixteen and a half years standing two years ago, and was on the graded list of the Revenue Department less than a year before the vacancy occurred which is thus filled up. Further comment after the remarks already recently made appears unnecessary. But if such an appointment is possible, what becomes of the principle of separation of Revenue and Judicial branches?

The fine statue of the Queen-Empress in the new Victoria Terminus and the medallion heads have been quietly unveiled; and as the scaffolding was removed on Monday morning, we should recommend the public to take an early opportunity of inspecting these additions to the artistic features of Bombay. The statue, which is ten feet six inches high, stands on a pedestal four feet high, and is an excellent example of Mr. Earp's work. The medallion heads, by the same artist, and also in Bath stone, represent Lords Dufferin, Dalhousie, Elphinstone and Reay, Sir Bartle Frere, Mountstuart Elphinstone, Sir J. Jejeebhoy (the second Baronet), Colonel Holland, the Chairman of the Company, and Mr. T. Watt, the Managing Director. Considering that the railway station is by far the finest modern building in India, that it is called after the Queen Empress, and that one of the Queen's sons is amongst us, we certainly think that the unveiling of the statue, which is virtually the completion of the building, should have been made the occasion of a public ceremonial. The public in Bombay, the press throughout India, and the architectural papers at home have given Mr. F. W. Stevens, the architect of this magnificent pile of buildings, the fullest possible recognition, and we think that the railway authorities here have acted in a very grudging spirit in deciding against any sort of public ceremonial. At home great public buildings and great docks are always inaugurated with a certain amount of popular display which is supposed to set the seal on the merits of the men who have made them. This used to be the case in Bombay, too—but it seems that we have changed all that.

Mr. Justice Nanabhai Haridas has been trying to "draw" the University, and he has failed. He has, as we all know, an idea that the examinations are badly conducted, and he very naturally wants to ascertain where the fault lies. He offered, therefore, to found a scholarship of the value of Rs. 150 a year for the Gujerati candidate as might every year pass the LL.B. University Examination with the highest aggregate number of marks. "The only condition," he continued, "is that every such candidate at the examination, whether successful or not, after the result is declared, shall, on application, be furnished by the University with a copy under the Registrar's signature, of the marks awarded to him by each examiner for each of the questions attempted by him in each set, as well as of the total marks awarded to him in each paper; and that a general statement of all such candidates, showing the above marks, be forwarded to me during my life time, and to my legal representatives after my death." The gift of a scholarship of Rs. 150 per annum is not to be despised; but this "only condition" proved too much for the Syndicate, and the University Registrar replied as follows:—"I am to say that they cannot recommend the Senate to accept the endowment proffered therein on the terms proposed."

The discussion on the new Municipal Bill continues to excite general interest, and in the reports we published last Friday we come to one of the most important points of all. In reference to the question as to whether the Commissioner is an officer of the Municipality, Mr. Naylor declared that this was not the moment for his reasons to be stated fully. But, he added, "I may say that this is a position I have never accepted on behalf of the Commissioner, and it is not a position he has occupied to the present time, and it is not a position which is now to be given him according to my interpretation of the Bill. He, as the Municipal Executive Officer, is not a subordinate either of the Corporation or the Standing Committee, but co-ordinate with those bodies, who are, with himself, the Municipal authorities." On the same question the Hon'ble Advocate General said:—"The Commissioner is an officer of the Corporation, and, I think, he should neither be addressed or entitled to comply with a requisition, such as those here contemplated, without the consent and sanction of the Standing Committee. He should not be put into a position to use his own judgment as to whether he will comply or will not comply with such a requisition. If the Commissioner is a Government servant, and although it may not always be that he is a Government servant, yet he may be so for a long time to come, he is put in a delicate position in having to say whether he will comply with the requisition of Government or not. A nervous man might consider that he was injuring his future prospects by refusing." The Hon. Mr. Telang declared that he agreed with the Hon. Advocate-General. It would be interesting to ascertain, before the discussion goes further, whether Government in any way endorse Mr. Naylor's statement. They admit that the Standing Committee is an authority subordinate to the Corporation, then why not the Commissioner. Mr. Naylor's assertion would certainly seem to strengthen the objections raised by our anonymous correspondent, and by Major H. O. Selby, as to the office of Municipal Commissioner at all.

A correspondent, whose name if we could give it would be an authority, sends us a short note about the new Municipal Bill, which pretty accurately reflects public opinion generally. The Bill is neither flesh, nor fowl, nor good red-herring. "My notion," he writes, "is that the Bill falls between two stools. It is not a Bill of concessions made by an autocratic Government to subjects with no right of self-government, nor is it a Bill which admits unreservedly that the city should govern itself within the necessary checks and limits of imperial interests. In the latter theory there should be no independent Government official at the head of the city but a man of its own. In the other theory all should be under the central control. But I am carrying coals to Newcastle."

Ten Lady Nurses have arrived in the Troopship Malabar on the 21st instant. One Lady Superintendent, and five Nursing Sisters are for duty at the Military Station Hospital at Rawal Pindi, and one Lady Superintendent and three Nursing Sisters for Bangalore. The pay of the Lady Superintendent is Rs. 400 per mensem and of the Nursing Sisters Rs. 175 per mensem. The employment of Nursing Sisters in Military Hospitals is, we think, a move in the right direction, and we have no doubt that their services will be duly appreciated by the soldiers. The Ladies are chiefly from St. Bartholomew's and Guy's Hospitals, London. We would like to see some being sent for the Bombay Presidency. Much useful work could be found for them at Poona, Mhow, and Bombay.

A correspondent writes:—"Are you not somewhat overhasty in your praises of antipyrin as a harmless cure for sea-sickness? I send you a cutting from the leading medical paper, which will show you what I mean." The *Lancet*, it seems, says that the public attention given to the latest remedy for sea-sickness, to which reference was made in our columns, has its percentage of evil as well as of good. "To suppose," says our contemporary, "that antipyrin may be taken recklessly, any more than chloral, is to adopt a position of a dangerous kind. Antipyrin has on several occasions been administered with unexpected results. It is a drug which has undoubtedly powerful effects on the nervous system, especially as tending to produce a lowering action. We must strongly protest against its indiscriminate employment without the supervision of a medical man." Our readers should remember, then, these few words of warning.

We understand that Colonel John Jopp, Commanding 12th Bombay Infantry, Ahmedabad, is to succeed Lieutenant-Colonel J. Watling, as Deputy Quartermaster-General at Army Headquarters, on the 1st May next. Colonel Jopp is an officer of large experience, both departmental and regimental, in the field and in quarters, and we have no doubt his appointment will give entire satisfaction to the Bombay Army. Lieutenant-Colonel Watling joins the 26th Bombay Infantry as second-in-command.

Sir James Fergusson seems to be a day after the fair in saying that the Secretary of State for India will not publish the report of the Public Service Commission until the views of the Indian Government had been received. It has, at all events, been published in India, but we are still waiting for the views of the Government.

The fluctuations in Sterling Exchange during the past week have not been nearly so great as in the rates obtained for Council Bills. One-sixteenth represents the former, but five-thirty-seconds the latter. On the 14th instant Council Bills fetched 1s. 4 9-16d., and, on the 19th, Calcutta paid 1s. 4 11-16d. for a lakh of Transfers, when Bombay was buying three months' Credits at 1s. 4 21-32d. On Wednesday, when our Banks were closed, the Calcutta market became excited, and ready Telegraphic Transfers were procurable at 1s. 4 19-32d. On the strength of this, a Bombay buyer tendered 1s. 4⅜d. for three lakhs of Transfers. Needless to say, he got them, and we can fancy with what pleasant alacrity the tender was accepted. The bulk of Wednesday's Councils were given at 16·53 pence, equal to 1s. 4 17-32d. per rupee. 45 lakhs were given, but 100 lakhs were asked for. Subsequently, one lakh was given at 1s. 4 9-16d. In a very short time the new Budget will be issued, and it will naturally affect the Exchange Market one way or the other. Bar Silver is now quoted 43 3-16. per oz., or within 1-16 of the lowest point. Exchange is certainly low, but trade is used to it being so and the season will probably glide on with a low level just when a high one was looked for.

ARRIVAL OF THE TROOPSHIP MALABAR.

Her Majesty's Troopship Malabar, Commander A. D. Fanshawe, arrived in harbour on Wednesday from Portsmouth, which port she left on the 22nd Feb., calling at Queenstown on the 24th, Malta on the 3rd, Port Said on the 7th, Suez on the 9th, and Aden on the 14th inst. She brought 68 officers, 20 ladies, 8 children, 1,162 men, 56 women and 60 children. Among the ladies there are 10 Sisters of Mercy and two Lady Superintendents. During the voyage there were four deaths—three soldiers and a child of Lieut. Shakespear, Bengal Staff Corps. The Malabar experienced fine weather throughout. The troopship sails again on the 31st instant with drafts. The following are the names of officers and their families:—

FROM PORTSMOUTH.

Lt-Col T J Tidmarsh, 1st W Riding	Lieut N Kirby, RE

FROM MALTA.

Capt B Wetherby, 2nd York L I Lieut C C Cook, R A

Besides the above there were the following ladies:—

	SISTERS.
Wife of Lieut Lemon and child, M S C	Miss Beresford
Wife of Lieut Shakespear, B S C	Miss Maxwell-Miller
Mrs Hayes	Miss White
Miss Loch (Lady Supdt.)	Miss Lickfold
Miss Oxly, (Lady Supdt.)	Miss Welchman
	Miss Harris
	Miss Betty
	Miss Kelly

THE SIKKIM EXPEDITION.

(FROM OUR OWN CORRESPONDENT.)

CALCUTTA, MARCH 16.

The Field Force started yesterday on a march through the Rajah's territory for Lingtu with the object of compelling intruders to retire beyond the frontier. Advance is being made very slowly in order to give the Tibetans time to come to their senses. According to latest reports, it is stated that the Lingtu garrison is anxious to negotiate.

CALCUTTA, MARCH 21.

The *Englishman's* special correspondent, telegraphing from Khaderuchen on March 19, says :—"Arrived here this morning at half-past eleven o'clock, having started from Lingtamtho at eight o'clock. The distance is barely five miles, but the road is extremely difficult all the way ; for about one mile from Lingtamtho it ascends a steep hill by zigzags, then goes along the ridge for about a quarter of a mile, and then descends by a sharp declivity to a mountain stream called Ken, which is 5,000 feet in altitude. After this it again ascends to this place, of which the elevation is 7,190 feet. The whole route, which is thick jungle, consists of little more than a roughly cleared cutting through the forest. The natural surface of the ground has been hardly touched, and it is exceptionly rough and uneven. The recent rains also rendered it very slippery, and as it sloped in places at an angle of about 30 degrees, the march was very toilsome. The mules, however, were brought in in excellent condition, which is greatly to the credit of the Transport Department. From this to Lingtu there is a steep ascent the whole way. We rise over 5,000 feet in five miles. At half-past two o'clock Colonel Graham, accompanied by Captain Travers, Assistant Adjutant-General, Lieutenant B. Pickford, Orderly Officer, Captain Mansfield of the Commissariat, and two or three other gentlemen, escorted by thirty men of the Pioneers, started uphill to reconnoitre, if possible, the Lingtu position. After a trying march, the first signs of the enemy were seen at four o'clock in an obstruction of stones and trees erected across the road. Lieutenant Pickford, who was with the advance guard, walked up to it and found it unoccupied ; but about thirty yards ahead he heard men talking. Moving on with the advanced guard about twenty yards further in the jungle, on the right of the road, he came upon a wall, or stockade, of bamboo and stone, some ten feet high. He returned to report the matter to Colonel Graham, who was then with the remainder of the Pioneers, who were removing the above obstruction. As the Pioneers now advanced towards the stockade they were suddenly fired upon by the enemy concealed in the jungle to their left at a distance of about thirty yards. The enemy at the same time sent up an howl like that of a pack of jackals and made a short rush upon us, but were immediately checked by the Pioneers opening fire. Some twenty to thirty shots were now exchanged on both sides, the enemy all the time howling as above described. As our advance up the hill had only been to reconnoitre, Colonel Graham ordered the men to retire, although they were eager to go on and close with the enemy. The retirement was effected gradually and in an orderly manner. The Tibetans fired a few parting shots, but did not pursue. We estimated their number at about fifty. They appeared to be armed with matchlocks. One man had a rifle. To-morrow Colonel Graham intends to attack the stockade."

(FROM OUR OWN CORRESPONDENT.)

ALLAHABAD, MARCH 15.

A Kalimpong telegram, dated the 14th inst., states that the unfavourable weather continues, rain falling heavily yesterday at intervals. The 13th Bengal Infantry had a wet march from Riang, but reached here in the afternoon. All the stores have been cleared from the Teesta Bridge, and the telegraph line laid to this station. By a great effort the wire will be carried on to Pedong to-day, a distance of thirteen miles. Snow is lying on all the high hills in Sikkim direction, and even on the lower hills. The advance from Pedong is expected to be made to-morrow, or on the morning of the 16th at the latest. The troops will have a hard time, as Lingtu is said to be covered with snow, and the cold is likely to be intense at that elevation. Ghoom is likely to be made the base, in place of Silliguri, as the Teesta Valley is beginning to get unhealthy, owing to the heat there. The tactics of the Tibetans are not yet known. They are still holding Lingtu, but caravans have passed through Pedong lately, which seems to show that the Lamas have not entirely blocked the road. The Duc d'Orleans is expected to join the Sikkim Field Force immediately.

ALLAHABAD, MARCH 18.

A correspondent telegraphs from Pedong under date of the 15th March to the *Pioneer* :—The Junior Dewan of Sikkim started on his return journey to the Raja at Intchi yesterday evening. He brought a message from the Raja, asking that the advance might be delayed with a view to his mediating with the Tibetans and thus settling the Lingtu question. This is the line the Raja has taken lately, but it has been made clear to him that no further delay can be permitted. To-day was the last day given to the Lamas to evacuate the Lingtu Fort, and to-morrow our column will begin its advance from this place. It appears the Chunglo Chipen and the Phari Jongpen, the latter the District Officer of Phari in the Chumbi Valley, really visited Lingtu, and then returned to Shalambi, one mile on the road to the Jelep La Pass, the object of their visit being unknown. They have only a small following. We can see Lingtu Fort from here distinctly enough through field-glasses in the early morning before the clouds cover the hills. Our little force is in excellent health and spirit, and the men composing both columns are most eager to be on the move forward. The telegraph will be laid on as we advance at least to the Relli if not further. The column for Lingtu left Pedong at 9 o'clock on the morning of the 16th inst., Colonel Graham and head-quarters accompanying. Another correspondent telegraphs from the Camp Rongli river under date of the 16th. The Lingtu column under Colonel Graham, consisting of two guns, one company British Infantry, and three hundred men of the 32nd Pioneers, advance on the 17th instant, and may be expected to storm the Lingtu Fort about the 20th. A similar column under Colonel Michell advances towards Tumlong. The 32nd Pioneers have made several temporary bridges over the Rongli river, one fit for laden mules. A ferry also has been made. The material for the permanent bridge is being collected. The Pioneers have got the wood sawn and the foundations ready on the east side of the river. Heavy rain has fallen in camp.

ALLAHABAD, MARCH 19.

A correspondent telegraphing from camp Rongl Chu under date of the 17th instant says :—Colonel Graham, with head-quarters, 2 guns and 100 men of the Derbyshire Regiment, arrived here this morning. Colonel Sir P. Bromhead, with 200 men of the Pioneers, left a few hours earlier to repair the road for the advance of the column. He halts for the night at Lingtam, thence goes on to-morrow, three miles to Ken Laka. To-morrow Colonel Graham, with the head-quarters, crosses the Rongli Chu, or Rilli river as it is more familiarly called, and we shall have fairly entered on our task. The column concentrate on the 19th inst. at Pedamchen under the Lingtu ridge. The 200 so called regulars and the 600 or 700 village levies, now said to be in Lingtu Fort itself, are not likely to venture to act upon the offensive ; and they are probably in a wretched state, owing to the heavy snow which has fallen and which must have blocked the road to Chumbi over the Jelap la Pass, which is nearly 14,400 feet high. There seems good reason to suppose the Raja will remain quietly at Intchi and await the course of events as he has nothing to fear from us personally, our quarrel being with the Lhassa authorities. The only accident in camp life was the finding of the body of a mule driver suspended by the neck from a tree. The man who had been missing since yesterday had evidently hanged himself. A native was brought in a prisoner, and rumour credited him with the murder ; but he seems to have been maligned.

ALLAHABAD, MARCH 20.

Intelligence has been received here that Colonel Graham, and the head-quarters with 100 men of the Derbyshire Regiment and two guns, under Major Keith, arrived at Rhenok on the 16th inst. The march was only eight miles, but as a descent had to be made to the Rnabett Chu of over 2,700 feet below Pedong, and then a rise to the Rhenok, a ridge which was over 5,000 feet, it was a fairly trying day for the transport animals. "On the 18th inst.," telegraphs a correspondent, "we crossed the Rongli River and then climbed steadily upwards to about 5,000 feet until we had crossed the ridge, when we began to descend, and eventually reached Lingtam camp, which is above the Lingtam stream. Sir P. Bromhead, with his 200 Pioneers, left Lingtam early on the 18th inst., and reached Keulaka some 3½ miles in advance. It had been reported that Booby traps had been laid at Keulaka, and that a detachment from the Lingtu Fort was there ; but no traps were found, and five Tibetans, who had been there some days to watch for our advance, left before Colonel Bromhead arrived. He is now on the Lingtu side of the Ken stream. To-morrow, the 19th inst., the whole column presses forward as far as Pedamonchen and even further to Jelukteo, if this is found to be practicable. We shall then be in a position to examine Lingtu at a short distance, and if it still holds a garrison, to decide how to attack it on the 20th inst. The latest reports received by Mr. Paul rather tend to show the numbers of men in the Fort to be smaller than was reported. Reinforcements from the Chumbi Valley could scarcely have reached Lingtu latterly owing to the heavy snow. We shall now begin the steady ascent which has to be made before Lingtu can be gained, and shall pass into a very cold climate. Various rumours are afloat as to deversions intended by the Tibetans and the *budmashes* of Sikkim, but these are probably quite unworthy of the least credence. However, Colonel Graham has issued clear orders as to meeting possible night attacks or ambushes on the road through the forest, and special orders have been issued warning soldiers against drinking water at casual places for fear of its being poisoned.

ALLAHABAD, MARCH 21.

A telegram, dated Camp Sedonchen, 19th March, says :—By noon to-day the whole of the Lingtu column were concentrated at this place, which is about seven miles from Lingtu by road, though much less than that in a bee line. Such news as reaches us shows that the Tibetans are watching our advance. We covered only five miles to-day owing to the steepness of the ascent, our present position being 7,190 feet above sea level. In the afternoon, Colonel Graham, with Mr. Paul, Captains Travers, Mansfield, and Bickford, and with thirty sepoys of the 32nd Pioneers, went on some distance towards Jelukteo to examine the road. After about two miles' hard climb they found the road blocked by a tree thrown across it and a low wall of stones. These obstacles were removed shortly afterwards, and the men were seen moving in the jungle ; but as the mist was thick, their numbers could not be estimated. Further on, a rude sort of stockade was observed commanding the road, where it turned at a sharp angle. Fire was opened from this and from the jungle by about a dozen men, while a few score of others made noisy demonstrations and threw stones. Colonel Graham's escort returned the fire, but it was impossible in the thick mist to distinguish the enemy clearly. After examining the position of the stockade our party returned to camp, having suffered no casualties.

A telegram, dated March 20, says :—One company of the Derbyshire and one of the 32nd Pioneers, with two guns, are just starting for the stockade. The camp remains here to-day, as the road must be improved before the advance of the whole column can take place.

GAZETTE OF INDIA NOTIFICATIONS.

(FROM OUR OWN CORRESPONDENT.)

CALCUTTA, MARCH 18.

The Viceroy leaves Calcutta on the 29th March, visiting Rewah, Lucknow, Murree, Srinagar and Umballa, reaching Simla on the 9th of May.

Mr. T D. Smith has been permitted to resign the Bengal Civil Service.

Surgeon-Major G. Hutcheson officiates as Statistical Officer to the Government of India in the Sanitary and Medical Departments.

The services of the Rev. H. Moore have been placed at the disposal of the Government of Bengal.

The Rev. M. Kirkby has been permitted to resign.

Mr. H. Badden officiates as Principal of the Residency College, Indore.

Lieutenant Barwell, 2nd Manchester Regiment, officiates as wing officer and Adjutant of the Deolee Irregular force.

Captain F. Sorrell has been appointed second in-command of the 1st Hyderabad Infantry.

Captain Adye has been appointed second-in-command of the 6th Infantry, Hyderabad Contingent.

Surgeon-Major C. Deakin has been appointed Medical Storekeeper, Meean Meer.

The following officers have been admitted to the Bengal Staff Corps :—Lieutenants D. Baynes, Highland Light Infantry ; C. Schlesinger, Connaught Rangers ; and W. Burlton, Hampshire Regiment.

The following officers have been granted furlough for the periods named :—Captain H. Hawkes, Assistant Commissary General, one year ; Lieutenant K. Burne, 4th Bengal Infantry, one year ; Surgeon-Major Sanders, Medical College, Calcutta, 245 days ; Colonel E. Temple, Meywar Bheel Corps, 182 days ; Colonel H. McNair, Bengal Infantry, one year ; Major W. Hill, 2nd Goorkhas, 190 days ; Captain C. Trench, 5th Goorkhas, one year ; Lieutenant F. Kelly, Military Works Department, 182 days ; Lieutenant J. Tulloch, Commissariat, one year ; and Surgeon R. Marks, 182 days.

The following have been granted special leave :—Colonel F. Brown, Superintendent, Public Works, North-West Provinces, two years ; and Major W. Shepherd, Consulting Engineer to the Government of India in the Railway Department, one year.

The following officers have been promoted :—To be Colonel in the Army—Lieutenant Colonel G. Simpson, Bombay Staff Corps. To be Major—Captain C. Macgregor, Bengal Staff Corps.

Lieut.-Colonel A. Taylor, Bengal Staff Corps, has been permitted to retire.

Captain A. Lane, Bengal Staff Corps, has been permitted to resign.

Captain J. Parsons, Bengal Staff Corps, has been transferred to the half-pay list.

Honorary Lieut. C. Atkinson, Military Works, has been permitted to retire.

Mr. D. Martin, Executive Engineer, Bengal, has been granted special leave for two years.

Mr. G. Moore officiates as Deputy Consulting Engineer of Railways to the Government of India, Calcutta.

Major R. Sargeaunt has been attached temporarily to the office of Consulting Engineer of Railways, Bombay.

Lieut.-Colonel F. Oldham, Examiner of Accounts in the Military Works Department, has been granted special leave for six months.

Mr. W. Brookes officiates as Deputy Director General of Telegraphs, *vice* Colonel Mallock. Mr. S. Luke officiates as Director.

REGIMENTAL POLO TOURNAMENT.

(FROM OUR OWN CORRESPONDENT.)

ALLAHABAD, MARCH 15.

In the Infantry Polo Tournament at Umballa, the 33rd West Riding Regiment have beaten the 88th Connaught Rangers for the cup by five goals to love. This is the third time that this regiment has carried off the event. At the Sealkote Tournament the 18th Bengal Lancers beat the 14th Bengal Lancers by five goals to four ; and the 15th Bengal Cavalry beat the 1st Bengal Cavalry by nine goals to three.

ALLAHABAD, MARCH 18.

The final tie in the Native Cavalry Polo Tournament at Sealkote was played on Saturday afternoon, when the 18th beat the 12th by four goals to love. Having now been three times winners, the 18th become permanent possessors of the Challenge Cup, which was presented for competition by the 10th Hussars when the Tournament was instituted

MAHABLESHWUR.

(FROM OUR OWN CORRESPONDENT.)

MAHABLESHWUR, MARCH 14.

"Here the world rests, and her tired inhabitants can pause from trouble and turmoil." All Bombay people seem to agree that the hot weather has commenced earlier than usual this year; and having heard of the delights of Mahableshwur, I decided on a little "nerve rest." There are various ways of reaching this hill station from Bombay. One of the most delightful of these is *via* Shepherd's steamer to Bankote, up the Savitree river to Dasgaon. Having sent your hack there direct, ride to Poladpore in the cool of the evening, and sleep at the excellent dâk bungalow. Ride in to Mahableshwur, *via* Warra, the following morning. While passing Warra, if you have not seen the celebrated Fort of Partabgarh, you could breakfast at the Warra bungalow, and visit the fort of the great Sivaji and the tomb of the murdered Afzul Khan. The second and most comfortable route is doubtless to leave for Poona by the 2 p.m. train, dine in Poona, have your bed made up in a phaeton, and start about 9 p.m. This will bring you to the foot of the hill in the early morning, and the drive up is most enjoyable —the air getting fresher and keener as you leave the plain, until you are thankful to pull over you a rezai before reaching Panchgani. Here morning tea and some strawberries and cream will support the weary traveller until he reaches Mahableshwur by 8 a.m. The third way is by train to Wathar. Leaving Poona at 3-30 p.m. you arrive at Wathar by 8-15 p.m., and then have forty miles by phaeton or tonga before you reach Mahableshwur. There is at present no night train, and this railway journey is now very hot and tedious. In many parts the line passes through cuttings of rock, which retain the heat, and shut out any breeze there may be.

To those going up for the first time I recommend a study of the "Bombay Gazetteer, Vol. XIX." There you may read an excellent description of its woods and glades, its "waving stretches of rich foliage," and its highland-like scenery. But it is the climate which will most interest those seeking to escape from the heat of the plains. It is never really hot here. At the present moment it is necessary for comfort to wear warm clothes all day, and in the evenings it is so chilly that a small wood fire is quite acceptable. You can walk with comfort at any time during the day. The evergreen forests, just now renewing their verdure, give grateful rest to the eyes fatigued by glare.

Every house is taken. Never has there been such a rush for accommodation. The owner of the "Fountain Hotel," however, told me he had still lots of room. The club chambers are nearly all taken. Tents are springing up in various shady nooks. The usual panther has been seen by a Mr. Johnstone. As this is the name of our clergyman, one naturally supposes there must be one. Besides, it has been *heard* by a lady who lives not far from "Barr's Bungalow" and the "Dhobies' Waterfall," the proverbial spot for panthers.

Not very many people have arrived yet, but they are coming up in shoals next week.

Their Royal Highnesses may then also be expected.

At present we have here :—The Rev. Mr. Johnstone (chaplain), Mr. and Mrs. Stewart, Mrs. Lindsay, Mrs. and Miss Beaumont, Colonel and Miss Becher, Mrs. Parker Jervis, Mrs. Holberton, Mrs. Dundas and family and Miss Arthur, Captain and Mrs. Proudfoot, Mr., Mrs. and Miss Alexander, Colonel and Mrs. Codrington, Mrs. Cooke and family, and a few others. On Sunday we were glad to see Mr. Crowe had turned up, and we hope he will always help us with his sweet tenor voice in the choir. Last Sunday he alone formed the choir. The chaplain has amply provided for this (Lenten) season by advertising morning and evening daily services, and three services for each Sunday.

On the 31st March some excellent houses, the property of the late Major Affleck, are for sale here, including "Craig Hall."

They are making a lovely new drive round the lake. The new road on the east of the lake runs from the Poona road into the Mahableshwur village road, joining the latter near Lily Cottage.

Now seated in a verandah with a grand view of the plains below, and the forest of trees on the plateau above, a cool fresh breeze putting new life into one and a large edition of "Lorna Doon" to read, one may safely say the question of "Nerve rest" has been solved :—

"Once more my adverse lot
"Leads me reluctant from this cherished spot;
"Again compels to plunge in busy life,
"And brave the" plains with heat and turmoil rife.

SIR CHARLES ARBUTHNOT.

(FROM OUR OWN CORRESPONDENT.)

MADRAS, MARCH 21.

Sir Charles Arbuthnot, the Commander-in-Chief of the Madras Army, left Madras for Ootacamund yesterday.

THE SALEM AGRICULTURAL SHOW.

The Governor leaves to-morrow evening for Salem, where he will open the Agricultural Show, and remain two days, proceeding afterwards to Ootacamund.

His Highness the Maharajah Scindia has, we learn, been somewhat indisposed recently ; but under the treatment of his medical attendant, Dr. Crofts, the young Chief is much better.

EUROPEAN HEALTH RESORTS FOR ANGLO-INDIANS.

MUNICH AND ITS GALLERIES.

(BY OUR ROVING CORRESPONDENTS.)

From St. Moritz to Chur is one day—and, as I said before when going up, a tolerably long day. I might have got out of the Engadine another way, *i.e.*, from St. Moritz to Nanders or Tarasp, another bathing-place, one day, and from thence another day to Inspruch, and so over the Brenner Pass to Salzberg or Munich. But this would have compelled me to sleep over night at Samadan, whence the diligence starts daily at 5 a.m., and have entailed two days' diligence travelling instead of one. The only object to be obtained was to see the scenery, and I had already travelled by this route before. I then chose the other route, which, though considerably the longest as the crow flies, was the shortest according to time. I came up by the Julier Pass, and determined to go down by the Albula, the scenery of which is said to be the grander of the two. I was fortunate, moreover, in finding the conductor's seat in the *banquette* which one can get by paying 6f. extra, vacant, and I took it. I acted wisely in choosing the Chur route, but the seat in the *banquette* proved one of the worst investments I ever made. The day turned out a winter's day of the worst description —half a hurricane with torrents of rain, which was snow on the higher parts of the route. As to seeing fifty yards beyond the diligence, it would have been impossible, even had we not had the *banquette* shut in as close as possible.

From Chur to Munich is another day—an easy day, all by rail. You leave Chur at 8-15 a.m., stop at Lindau an hour and a half for dinner, leave again by express at 2 p.m., and arrive at Munich at 6-30, in time for supper. The scenery passed through between Chur and Lindau is very beautiful, and, as the day was lovely, I had a good opportunity of seeing it, which on the journey to St. Moritz I had not.

At Munich I stayed at the Bairisher Hoff, an old-established hotel, not over dear and very well managed. As Munich, the capital of Bavaria, is not quite so unknown to English tourists and travellers as Nürnberg, it is not necessary for me to enter into any detailed description of its sights. It is well known to be an emporium of art, and to contain one of the finest galleries of the pictures (the *Pinacothek*) of the old masters in Europe. It contains some of the best examples of Reubens and Vandyke, but especially of the former ; and also some splendid pictures of Murillo. I spent two delightful days in this gallery and the Glyptothek, the private gallery of sculpture belonging to the late King Ludwick, whion he presented to the town. No king in Europe was more devoted to the fine arts than King Ludwick, as no king did more to encourage the study of them in his own capital. That Munich has produced a Kaulbach and a Schwanthaler would be evidence sufficient that the efforts of the late king for the advancement of art were not without some brilliant results ; but it did not strike me, judging from the pictures in the new Pinacothek and the *knust austellungs Gebaüde*, or Royal Academy I assume, that artists in Munich had responded to the invitation of their king in proportion to the encouragement given to them. The pictures of Kaulbach and Schorn of course stand apart. That of the destruction of Jerusalem —Kaulbach's finest work—and the Deluge by Schorn are in the new Pinacothek. These two pictures alone are worth coming to Munich to see, as are also Kaulbach's sketches for the frescos on the outside of the building. But the pictures in the Royal Academy struck me as being very poor, although very high prices were attached to them. If prices are a criterion, art seems to be highly appreciated at Munich. But then the prices were affixed to the pictures by the artists themselves, and it is only fair to the public to record that, out of about 1,000 pictures, not 2 per cent. were marked "ver kauft," or "sold." It is, perhaps, too severe a trial to the modern artists of any country to pass from such a splendid gallery as the Pinacothek into the Royal Academy ; still, making every allowance for the artists with such noble models before them, they ought to have made better use of them than they seem to have done at Munich. Schwanthaler's museum and the atelier of his students will very well repay a visit. The models of all the great works which Schwanthaler executed during his life-time for half the capitals in Europe, are there to be seen, including portions of the colossal "Bavaria," which, after being modelled by him, was cast in bronze by Müller, and which stands a short way outside the town. Some idea of the size of this monument may be gathered from the fact that eight persons at the same time may sit in the head. I had the honour, on a former occasion, of sitting there, and, as it was the height of summer, I found the heat so great that I think the Bavaria must have had a headache. A very good view of the town is obtained by looking through the eyes of the statue. It is a very great work (61½ feet high)—the largest of the kind, I imagine, in Europe ; but it struck me as being very ugly. The great figure of Victory, driving the four colossal lions which surmounts the triumphal arch at the end of Ludwig Strasse, is much more effective. It was modelled by Wagner and cast by Fr. Müller. The Royal Bronze Foundry outside the town is the finest, I believe, in Europe. When I was here before, I visited it, as also the national museum and the museum of Natural History, in which latter there is a very fine collection of Brazilian antiquities and objects of interest. No one should leave Munich without seeing the royal palaces. In the old palace, or rather in the ancient portion of the palace, there is, amongst the relics of the *Rich Chapel*, a small enamelled pocket altar of the unfortunate Mary Queen of Scots. Before this altar she said her prayers when in prison, and carried it with her to the scaffold, retaining it in her hand until the moment before she laid her head on the block. The altar was given by Pope Leo XI. to William V., Elector of Bavaria ; but how it came into the possession of Leo, I am not able to say. There is some difficulty in seeing this interesting relic, as the chapel is not shown unless by special permission. In the new palace, or that portion of it which is shown, are the fine frescos of Schnorr, illustrating the history of the national and celebrated legend of the *Nieblungen* Treasure, commencing with Siegfried's arrival before the palace of the Emperor Günther at Worms ; his return home with Kriemhild, and his marriage with her ; Hagen sinks the *nieblungen* treasure in the Rhine ; Kriemhild tells Hagen the only part of his body in which Siegfried is vulnerable, in order that he may protect him ; Hagen makes use of the information treacherously to murder him ; Kriemhild finds the corpse of Siegfried on her way to church, and discovers Hagen to be the murderer by the wounds bleeding afresh at his approach ; her revenge ; fighting, slaying, conflagration, removal of the slain, masses for the repose of the dead, &c., &c. These frescos are represented on the walls and ceilings of five halls, called the Entrance Hall, the Marriage Hall, the Hall of Treachery, the Hall of Revenge, and the Hall of Lamentation.

In the evening I took a drive in the *English Garden*, the Hyde Park of Munich ; and at 11 p.m. I left by the train for Vienna, which is a day or night journey of twelve hours from Munich.

"ANY MAN OR YOU."

She was a little country maid,
She sang the whole day thro',
An idle song—"I'm not afraid
Of any man or you ;"
Till all the farming men about
Would come to watch her churning,
But she'd ape her mistress, cry "'I'm out,'
And you were best returning."

Her arms were bare, her eyes were pure,
Her laughter sweet and low,
Her speech was, like her dress, demure—
The men they would not go ;
And so her song of "Not afraid
Of any man or you"
Went through the county till it made
A very great to-do.

And I, who wrote this idle song,
And taught her, till she knew it,
Till not a note or word was wrong—
I hate the song and rue it !
Last night I caught her in the shade,
She turn'd and look'd me thro',
And sobbing sang—"I'm not afraid
Of any man or you."

A MORNING SERENADE.

(AFTER VICTOR HUGO.)

Day breaks, and yet thy door is fast ;
Each lazy rose her bath is taking,
And blushing red unfolds at last
To tell thee it is time for waking !
I prithee, sweet, arise and see
Whose songs and tears are all for thee !

Here trellis'd trees in trim array
Tap at thy lattice, dear, above ;
And, there, the lark, proclaiming day,
Is shrilly heralding my love !
I prithee, sweet, arise and see
Whose songs and tears are all for thee !

LIFE AND LOVE.

How is it you love me so much, dear,
A proud girl goddess like you,
That a look or a word or a touch, dear,
Thrills me soul and body thro',

As your little hands tenderly press mine
With happy girlish glee,
And pet and soothe and caress mine,
And say they are both for me ;

And your long locks fetter and bind me
In a maze of yellow tress-work,
And hide me and wrap me and blind me,
Till my kisses are only guess-work.

If you did not love me at all, sweet,
I wonder how I would take it ?
Would I fondle and kiss your thrall, sweet,
Or trample it down and break it ?

Break it ? who said it ?—not I, dear,
How could I break it and go
Thro' the days with a life-long lie, dear,
And the nights with a desolate woe !

CHAPTER XXXVIII.

THE HIMALAYAS.

"I hate doubts and mysteries, Hector," said Lydia, "and, say what you will, there is a shadow of some kind between us. Men and their wives are generally supposed to squabble, so, if you like it, we will live like other people; only, please tell me what to do!"

"No! No! We won't," I cried. "We are not like other people, and we can't afford to quarrel like them. Other people know all about each other, and have very likely been children together. We met by chance. Everything in each of us was new to the other. We love each other very dearly, and that should be enough for us."

"Yes!" said Lydia; "then roll up the black curtain that veils your mind. There is nothing in our past to grieve either of us. I told you that, dear, in the Nunnery Garden, and you promised never to speak of it again."

As she spoke we were turning Acheen Head. There had been a terrific downfall of rain. The thunder-storm had passed over us, but the atmosphere was still charged with electricity. The stars were hidden by heavy clouds, while the horizon was bright with incessant flashes of sheet lightning, and the sea all around the steamer was lit up with nebulous streams of phosphoric fire.

Then she talked of the future. To live out of the world, to live by ourselves, so that that man Wylie should never reach us: this was my one thought now. That was what Lydia, without knowing why, called my "black curtain," and when she suggested that we should go to Java and stop there, I gladly rolled it up for good.

o o o o o

We were tired of roaming. We had sold the yacht and bought a house, not a red-roofed cottage by a lake, but a huge old planter's bungalow, on a spur of the Himalayas, looking straight down into the glorious country of the Doab, a mile below. We were so far from the nearest hill station, that in all our walks and rides we never met a human being, save, now and then, a few Tartar-featured mountaineers.

Here we were almost as much alone as on that awful day and awful night we had passed while in Java on the top of the volcano above Bangdong. There we hid ourselves from the howling storm on the edge of the huge crater. Far down in its depths the mud lake broke into great bubbles, that burst like pistol shots, while their faint blue smoke rose up in sickening, sulphurous fumes. We had travelled over India since then. But we were as completely alone here in our pleasant Himalayan retreat, as on that remote and unvisited volcano. And here the scenery was at once lovely and sublime. Beneath us, with the Ganges and the Jumna as its boundaries on either side, lay the smiling, fertile Dhoon, under an atmosphere so clear and bright that the gleaming towers of Delhi—more than a hundred miles away—were sometimes visible. Behind us, far across the interminable forests of cedar-trees, pine-trees, and deodars; far beyond dark mountain ridges and slopes of eternal snow; far above the seas of drifting clouds and rolling mists, we could see the Snowy Range itself, the mighty Himalayan peaks—the sources of the two sacred rivers below us, and the home of the Hindoo gods.

The first sight of the Snowy Range is disappointing, for only a broad belt of the topmost peaks is visible. But the Snowy Range grows upon you day by day, till you recognize not only its pure and immaculate beauty, but its overwhelming massiveness. Then, when you have learned to know its glittering peaks and pinnacles, its towers, its domes, its glaciers and its deep shadows, never on two different days, and scarcely for two hours together, do they seem alike.

The sale of the Tortoise had brought us in an unexpectedly large amount of money, large enough to pay for our house and its furniture and to leave us with a good round sum in hand. The money was lavishly squandered. Not only did the most expensive things come to us from Calcutta, but things that money could not buy there, and that must, I felt certain, have been Lydia's long ago. In the old days Priscilla used to fill me with a vague distrust. Later on I grew to look upon her as the repository of Lydia's mystery. Now, as she opened the huge packing cases, and seemed to find a kind of familiar place for all the ornaments and costly nick-nacks, I began to detest her; I scarcely knew why; perhaps because she was the only link between Lydia and her past. The house, a fine old stone bungalow, built in the days when planters are richer than they ever will be again, was far too large for us, and I hated its fine furniture.

It was about this that we had our first serious fight.

"I was only trying to please you," cried Lydia. "You may live in a barn if you like. At all events, I shall take no more trouble. I shall order nothing more. The house shall remain as it is."

Next afternoon, however, found us reconciled once more, and once more sitting close together on our favourite little grass-plot on the highest point of the Black Needle Rock. The river, before it ran though the rich valley of the Dhoon, so closely washed the base of the black cliff, five or six thousand feet below, that we could have tossed a pebble into it. Behind us, as we sat, the Snowy Range shone white and bright, with its deep black shadows mapped out and illuminated by myriads of diamond points.

To atone for our quarrel Lydia talked to me as she had never talked before, except, perhaps, at Goa. But now she spoke personally and without restraint of all our happiest moments, and of little intimate thoughts and feelings I never imagined she recognized at the time.

"O Sweet Philosopher!" I cried as she ran on, "you are inspired to-day. Tell me what no philosopher has ever told us yet; tell me the world's great secret: What is love?"

"Love," said Lydia, smiling, "is you and me."

"That is enough for me," I answered, "but scarcely enough for the world and the critics."

"Hush! Hector! That is treason. What have the critics and the world to do with us? Stop," she continued, "love is you and me and eternity. Does that please you, dear?"

"Please me! Yes. But why?"

"Because in love, as in birth and death, Hector we surely touch the boundaries of eternity."

Just then the light from the sinking sun fell full on the Snowy Range. Peak after peak far into its remote recesses was lit up with a beautiful, pale, pink colour, a living and transparent colour, indescribable in words, but as quick as lovely and as vivid as the warm glow that may once in a lifetime, and for a moment only, flash across the half-veiled bosom of some fair girl just betrothed.

Then a gust of ice-cold wind rushed up from the valley.

The sun had set. In a moment of time the Snowy Range was livid, grey, ashen, desolate and corpse-like.

Lydia trembled a little. She took my hand very tenderly as she laid her head on my shoulder, and, then, she burst into tears. I kissed her hand as it lay in mine, and then I kissed her lips. But, as I kissed her, she broke from me with a shriek. There, close behind us, stood Mr. Wylie of Bussorah, with a terrible scowl on his gloomy forehead, and with one arm outstretched like the arm of an avenging spirit.

"At last!" he cried, in a deep, low voice, that was almost sacramental in its solemnity, "at last, after three months' searching, I find you both, weak and loving as of old. Did you think to cheat me by hiding in the palm groves of Ceylon or among the volcanoes of Java? Did you, Madam, for a moment. . .."

"Hush, sir! Spare me! forgive me!" said Lydia, faintly, pressing her hands across her eyes, so as to shut out the very sight of him, and retreating slowly, step by step, before his awful glances as she spoke.

"Forgive you!" he cried. "I am not of those who forgive when their warnings are ignored. I followed you and dogged you across Asia to give you warning. Why should I have degraded myself in a miserable disguise, but to save you from your folly. You knew what I meant long ago. The hour has struck for vengeance."

"It has!" I shouted, seizing him by the throat, as an extraordinary thought flashed suddenly through my brain. "Who are you, that you should dare to spy upon our actions and dog our footsteps? Who are you, and what are you? Sheik, or Wylie, or Devil, or whatever you are, be silent. The lady you speak to is my wife!"

"Not your wife," he said slowly, "not your wife; but my brother's!"

I let his throat go; and, sick and faint, I ran towards Lydia.

Her looks implored me to stop. I stood motionless between them.

"Lydia!" I cried, "for the love of Heaven or the love of me, say that that dreadful charge of his is a lie! Say that you know no brother of his."

"Hector!" she answered, in a low sweet voice that only came to her in moments of endearment, "I cannot say that. Of Mr. Wylie I know nothing. But the poor man he speaks about, the man he calls his brother, had been mad for years, hopelessly, irretrievably mad. I was his wife once, God help me! But he and I could never have met again. I was flying from myself and him when I met you. Ah, Hector! you will never know how I liked you when we met, or how I hated my liking when I thought it wrong, or how I love you now!"

"No, Madam! nor how you loved my brother! nor how you maddened him with your outbursts of loving passion, your sudden fits of cold neglect, your wilfulness, your selfishness, your craze for admiration. Mad! yes! and raving of you still in his madness, as you sat here a moment ago with another man's arm around your neck! Love you, Sir! Yes, as she loved my brother and other men before his day and since. Shall I tell you your wife's story?"

"Stay! Stay!" cried Lydia, throwing her hands out with an imploring gesture.

"Too late! Madam," he answered sternly, "Too late! You bought my brother with your accursed gold. You loved him and he was your toy and your plaything, for you had bought him. But you forgot that my poor brother, though he had another father and another name than mine, was almost as a son to me—a noble lad, with pure, brave thoughts and great gifts and high ambitions. There was nothing he might not have accomplished if you had only let him be. I thought to make atonement for my own life by the care I took of his. You came across him, and he changed, as day into night, as white into black, as Heaven into Hell. You made him besmirch his fair name before you maddened him. Then you never gave him a second thought. There are others, other gentlemen, gallant and loyal before they knew you. Shall I begin at the beginning, Madam, and go on to the end?"

"Stop!" cried Lydia, imperiously. "Stop, Sir! Your brother was a gentleman, whatever else he was, and you should be one too. If you talk on Sir, you will talk of a dead woman!"

Her grey eyes, tearless and fearless still, met mine for a moment very lovingly. Then Lydia threw up her arms, and, as under some strange mesmeric influence, she glided towards the edge of the terrible black precipice. She seemed to be falling slowly over it. At last the spell was broken. I sprang forward just in time to save her as she fell. I held her for a minute to my heart, and then she burst into tears.

"You would not let me go?" she whispered, as I kissed her tears away. "You would not let me go?"

"Never!" I cried. "Never in this world or the next! You are mine and I am yours! And what does anything else matter to us now?"

"Nothing," she answered, "if you care to keep me. But you frightened me, Hector, by the scared look in your eyes, and I thought you might be happier if I flung myself into the river. . . I thought, but I thought nothing. I was frightened by the scared look in your eyes."

"Sir!" she exclaimed, as Mr. Wylie again approached us. "You maligned me so terribly that I almost killed myself. There was not one word of truth in what you said except about my unhappy marriage as a girl. You were too eager in hounding a happy woman to death in her happiness. Your brother, poor soul, if he was your brother, died before ever I met Mr. Hicks. I only heard the news at Goa, Hector, and that was why I brought that telegram to you in the Nunnery Garden, and why the old priest, who had been my tutor and knew my story, gave us both his blessing. I lied about that telegram, dear, and how bitterly I have regretted it. But the lie I told was a loving lie."

"Dead! My God!" cried Mr. Wylie. "Dead!" Then he buried his face in his hands and disappeared—disappeared for ever—in the mist.

Lydia touched my arm.

"I was free before I met you, Hector, though I did not know it at the time. All the lies I told you about the loss of my fortune were loving lies. The wretched money that used to be a barrier between us is ours still. We can take it or leave it as we like. I tried hard, Hector, I swear I did, to tell you the truth at Goa, but I could not tell it then; and I loved you so, that I longed to see if you would love me for myself."

Then the moon, suddenly breaking out of the clouds, shone full upon the Snowy Range. Beautiful, calm, and supremely pure, the great white Himalayas seemed an omen of inexpressible happiness.

With all our doubts removed, and with hearts too full for words, we went slowly and lovingly home, through the still deodar forest.

THE END.

MADRAS UNIVERSITY CONVOCATION.

(FROM OUR OWN CORRESPONDENT.)

MADRAS, MARCH 21.

A Convocation of the Madras University for conferring degrees was held yesterday afternoon at the Senate House. H. E. the Governor, Lord Connemara, the Chancellor, presided. The following are the number of candidates presented:—Thirty-one for Bachelor of Laws; three for Bachelor of Medicine; seven for Licentiate of Medicine and Surgery; one for Bachelor of Civil Engineering; three for degree of Licentiate of Teaching; four for degree of Master of Art; and one hundred and seventy-six for degree of Bachelor of Art. Colonel Hughes-Hallet, Judge Advocate-General, delivered the usual address. This was the first occasion on which a military officer had delivered an address. In the course of his address, which was *extempore*, Colonel Hallet advised those unsuccessful not to make idle excuses and go about saying they ought to have passed, that they had answered the questions properly, and that the examiner must have made a mistake in the marks. There was no disgrace in not passing, but they had should not shirk the truth. He said that papers were frequently very hastily answered, villainously written and blotted, smudged and corrected all over. These characteristics were an intolerable fault. He advised students to be independent, but deferential and courteous to avoid petty squabbling and litigiousness, to be thorough and zealous in the discharge of duty, to encourage education amongst their womankind, to be good subjects, to abstain from querulous complaints, to compare the India of to-day with that of a hundred years ago, and to be grateful for the great privileges they now enjoyed.

THE ENHANCEMENT OF THE SALT TAX.

(FROM OUR OWN CORRESPONDENT.)

POONA, MARCH 18.

At a largely attended public meeting of the inhabitants of the Cantonment and City of Poona, held at the Town Hall under the auspices of the Sarvajanik Sabha, a memorial to the Government of India, praying them to reconsider the recent Resolution, enhancing duty on salt, was adopted. The draft of the memorial was referred to a committee of seven gentlemen for finally "touching up," and sending it to the Government.

AHMEDNUGGER, MARCH 20.

At a largely attended public meeting of rural and labouring people, it was unanimously resolved to memorialize Government against the enhancement of the salt duty. The meeting, which was presided over by Rao Bahadur Narayan Raojee was very enthusiastic. A memorial to the Viceroy was adopted after great discussion.

GOWLEE, OR DOODWALLA.

the Gowlee, haunts me in my dreams, ing that he has been left out in the cold. ssed him with the borah and the baker, ers with whom I had merely business rela- . Gopal seems to urge that he is not on footing with these. How can he be com- a mercenary borah? Has he not ministered nts, morning and evening, in wet weather Have not my children grown up on his e will not deny that they have eaten the read too, but who is the baker? Does he the Sahib's presence in person as Gopal . He sits in his shop and sends a servant, opal. He is one of my children, and I am r and mother. And I am forced to admit ome truth in this view of the case. The ed man who haunts my house of a morn- a large basket of loaves poised slantwise ad, and converses in a strange nasal brogue cook, is not Mr. De Souza, baker of supe- and second sort bread, and manufacturer kind of biscuits, cake, &c., but a mere y. My intercourse with the head of the onfined to the first day of each month, waits on me in person, dressed in a smart ket, and presents his bill. Also on Good e sends me a cake and his compliments, former, if it is not intercepted by the but- pplied to his own uses, is generally too for my taste. Very different are our with the Doodwallah. Our *chota hazree* him in the morning; our afternoon tea roceed till he comes; the baby cries if the lah is late. And even if you are one of the strike for independence and keep their , I counsel you to maintain amicable rela- h the Doodwallah. One day the cow will refuse to be milked, and the butler will you with a troubled countenance. It is a se and demands professional skill; the llah must be sent for to milk the cow. In her ways, too, we are made to feel our nce on him. I believe we rarely die of or typhoid fever, without his unobtrusive e. And all his services are performed in ot through any underling. That stately walks up the garden path morning and erect as a betel-nut palm, with a tiara of d milk pots on his head, and driving a buffalo before him, is Gopal himself. any other figure in the compound me in the same way as his. It is er Eastern in its simple dignity, and sym- it is eloquent. If these reasons do not ou, he has others; if they fail, he gives lict against the Doodwallah. Next morn- pal is called to superintend the making of tter and convicted, convicted but not t. He expresses the greatest regret, but the buffalo; its calf is too old. To-morrow all have the produce of another buffalo. day you have the satisfaction of seeing a lthy pat of butter swimming in the butter rved and curled with all the butler's art, ull-blown dahlia. But the milk in your tea t improve, for Gopal, after ascertaining ch milk you set aside for butter every day, at the new buffalo yields only that quan- d so what you require for other purposes from another source. The butler forgot ou this. What bond is there between him est Gopal? I cannot tell. Many are the es of housekeeping in India, and puzzling blems. If you could behead your butler when g went wrong, I have very little doubt every- ould go right, but the complicated methods ern justice are no match for the subtleties an petty wickedness. And yet under this f cunning there is a vein of simple stupidity constantly crops up where you least except emember a gentleman, a bachelor, who set himself a very high standard. He would be strictly just and justly strict. He suspected that his milk was watered, but his faithful boy protested that this could not be, as the milking was begun and finished in his presence. So the master provided himself with a lactometer and the suspicion became certainty. Summoning his boy into his presence, he explained to him that that little instrument which he saw floating in the so-called milk before him could neither lie nor be deceived. "It declares," he added sternly, "that there is 25 per cent. of water in this milk." "Your lordship speaks the truth," answered the faithful man, "but how could I tell a lie? The milk was drawn in my presence." "Do you mean to say you were there the whole time the animal was being milked?" "The whole time, your lordship. Would I give those rogues the chance of watering the Sahib's milk?" The master thought for a moment and asked again, "Are you sure there was no water in the pail before the milking began? these people are very cunning." "They are as cunning as sheitan, your lordship, but I made the man turn the pail upside down and shake it." Again the master turned the matter over in his just mind, and it occurred to him that the lactometer was of English manufacture and might be puzzled by the milk of the buffalo. "Is this cow's milk, or buffalo's?" he asked. The boy was beginning to feel his position uncomfortable and caught at this chance of escape. "Ah! that I cannot tell. It may be buffalo's milk." *Tableau.*

I have spoken of having butter made in the house, but Gopal carries on all departments of a dairyman's business and you may buy butter of him, at 2 annas a "cope." Let philologists settle the derivation of the word. The "cope" is a measure like a small teacup, and when Gopal has filled it, he presses the butter well down with his hand, so that a man skilled in palmistry may read the honest milkman's fortune off any cope of his butter. How he makes it, or of what materials, I dare not say. Many flavours mingle in it, some familiar enough, some unknown to me. Its texture varies too. Sometimes it is pasty, sometimes semi-fluid, sometimes sticky, yellowing the knife. In colour it is bluish-white unless dyed. All things considered, I refuse Gopal's butter and have mine made at home. The process is very simple and no churn is needed. Every morning the milk for next day's butter is put into a large, flat dish to stand for twenty-four hours, at the end of which time, if the dish is as dirty as it should be, the milk has curdled. Then, with a tin spoon, Mukkun skims off the cream and puts it into a large pickle bottle, and squatting on the ground, *more suo*, bumps the bottle upon a pad until the butter is made. The artistic work of preparing it for presentation remains. First it is dyed yellow with a certain seed that it may please the Sahib's taste, for buffalo butter is quite white, and you know it is an axiom in India that cow's milk does not yield butter. Then Mukkun takes a little bamboo instrument and patiently works the butter into a "flower" and sends it to breakfast floating in cold water.

Gopal is a man of substance, owning many buffaloes and immensely fat Guzerat cows, with prodigious humps and large, pendant ears. His family, having been connected for many generations with the sacred animal, he enjoys a certain consciousness of moral respectability, like a man whose uncles are deans or canons. In my mind, he is always associated rather with his buffalos, those great, unwieldy, hairless, slate-coloured, docile, intelligent antediluvians.

EHA.

THE STATE OF BURMAH.

(FROM OUR OWN CORRESPONDENT.)

RANGOON, MARCH 15.

A Government telegram from Upper Burmah reports that Lieutenant Hunter, of the 10th Bengal Infantry, with a party of a hundred rifles of that regiment, who has been tracking the Shwegyobyn Prince in the tract of country between Chindwin and south Pagyi, surprised the Prince's camp and captured 45 dacoits, 127 guns 71 dahs, 45 head of cattle, and a large quantity of ammunition and paddy. The Prince and two lieutenants narrowly escaped capture and fled towards Mingin.

RANGOON, MARCH 20.

The official summary from Upper Burmah reports the northern division quiet. No disturbance is reported from Mogaung since Captain Adamson was there; and our relations with the Kachins are reported to be friendly. Ordinary dacoity is prevalent at Kyouksey. The rest of the central division is undisturbed. A party of police under Inspector Bentabole (*sic*) fell into a dacoit ambuscade in Upper Chindwin. One policeman was killed and two were dangerously wounded. In Myingyan, during a dust-storm on the 16th a fire broke out, and destroyed a portion of the town. Some houses in Toungdwingyi were fired by a small gang of dacoits. In the Minbu district two men, who had given information about dacoits, were murdered. In Pyinmana and Yamethen there were several petty dacoities, and in one case a dacoit leader was killed by villagers.

We (*Indian Daily News*) notice that a simultaneous protest is being raised in the North-Western Provinces and in the Bombay Presidency against the pitchforking of officials trained in the Revenue Branch of the service into high judicial posts, for which their experience can have but ill-fitted them. The necessity for separation of the Judicial and Revenue Branches is fully admitted by the Government, and only financial considerations are understood to block the way. Care might at least be taken to keep the functions of the two branches as distinct as circumstances will allow. But this does not appear to be done in all cases.

FUNERAL SERVICE AT THE CATHEDRAL.

A Service of Mourning was held on Friday evening in St. Thomas's Cathedral for William I., late Emperor of Germany. The congregation was a large one, comprising the great bulk of the European official and non-official element in Bombay. All the foreign Consuls were in attendance, and the members of the German community assembled in large numbers. Soon after six o'clock the procession marched up the centre aisle of the church. It was headed by the Aides-de-Camp and other members of the staffs of H. E. the Governor and H. R. H. the Commander-in-Chief. They were followed by the Judges of the High Court and the Members of Council, behind whom came the German Consul and Deputy Consul. H. R. H. the Duchess of Connaught, who was in deep mourning, walked between H. R. H. the Duke and H. E. Lord Reay. The service, which was choral, was most impressive, and lasted over threequarters of an hour.

THE LATE EMPEROR OF GERMANY.

(FROM OUR OWN CORRESPONDENT.)

BANGALORE, MARCH 17.

Ninety-one minutes' guns were fired yesterday as a mark of respect to the memory of the late Emperor of Germany.

THE EMPEROR OF GERMANY.

TO THE EDITOR OF THE TIMES OF INDIA.

Sir,—Will you be kind enough to assign a corner to the following lines, written on the death of the Great Emperor William, if they have any merit of their own?:—

Not of thy blood nor of thy race nor creed,
Nor of the clime where first thou saw'st earth's light,
Nor of the land o'er which thy sceptre swayed,
And which thy mighty voice each moment heard,
Nor of the states of which thou centre wast,
O Wilhelm Great! of these I am not one;
To regions distant from thy happy land,
But of no moment small, I do belong;
Zoroastrian by birth am I; still I
Thy countrymen in mourning join, and share
Their grief. A mighty, mighty shock I felt
When thy great spirit was by angels hurled
From the earth to silent nature's dark abyss.
Was it, O spirit soft, was it, that thou
By the too frequent sight of this small globe
And all its joys all that now it and holds
Wast satiated with all worldly things?
Was it that struggles between men and men
At the time when thy humanity proclaim
In the bred hatred and contempt and scorn?
The turmoils of this life, was it, that these
Caused thee to fly from thy corporeal frame,
And made thee pant for rest, profound and deep?
What'er may be, O spirit, thou art gone,
Gone, gone to climes and regions far from earth,
Gone, gone to realms of purer air, divine,
Where thou our wailings canst no longer hear.
Thy duty done, thou hast to God returned.
Thy earthly cares, with thy bodily form,
Have perished and been buried deep in ground.
For thee awaits a better lot and fair,
For thee a life in unsubstantial form,
Free spirit, thou canst range from place to place,
Now that from earthly fetters thou art freed.
All love and pain and grief have fled from thee;
In thee no sympathy can now abide;
All human feelings fly when body dies.
Thou care'st not now for thy unfinished tasks;
With quiet looks wilt thou behold on earth,
Untouched by bloodshed and by fierce fights.
Thy flight, O Soul, predicts some danger here,
And thoughtful minds it fills with shapeless fear.

D. F. M.

CHILDREN'S FETE AT THE LADIES' GYMKHANA.

The annual fête to the children of the members of the Ladies' Gymkhana, which took place on Saturday evening, was in every way a great success, a fact that was due, in no small measure, to the active exertions of Mrs. Gilbert, Mrs. Lowell, Mrs. E. G. Smith, Mr. J. C. Anderson and Mr. E. S. Luard, the honorary secretary, who formed the sub-committee entrusted with the arrangements of the *fete*. A little after four o'clock, the grounds of the Gymkhana were thrown open to about 75 children, who streamed into the pavilion, where a most sumptuous tea was provided for them. The pavilion was very tastefully garnished with flags and leaves. There were three long tables loaded with cakes, fruits, &c., each presided over by one of the ladies of the sub-committee. Tea over, the little ones were grouped together under the trees and photographed, after which they romped about, playing all sorts of games. Then came the branpie dips for toys, which afforded much amusement and no little pleasure to those who were recipients of the very pretty presents. Later in the evening the whole place was illuminated by means of coloured *butties* and Chinese lanterns. The scene was one of great beauty. Shortly before breaking up, the children were treated to a fine pyrotechnic display. At half-past seven, nestling close to their mothers, or their ayahs, the little things were taken home, tired but happy.

The subscriptions to the Central Committee of the Countess of Dufferin's Fund in January and February amounted to Rs. 19,239. The third annual report can now be had by members on application to the Honorary Secretary; and Queen's Register of the Jubilee Collection is also ready for issue.

DEATH OF MR. JAMSETJEE NUSSERWANJEE PETIT.

We very much regret to announce the death of Mr. Jamsetjee Nusserwanjee Petit, which took place at his residence, Gowalia Tank Road, at 1 a.m. on Monday. Deceased was ailing for about a fortnight past from liver complaint, and notwithstanding the best medical aid, complications ensued, which ended fatally. He was the only son of Mr. Nusserwanjee Petit, a large mill-owner and a wealthy merchant of this city, and was the nephew and also the son-in-law of Sir Dinshaw Manockjee Petit. He was only about thirty years of age. He was engaged in commercial pursuits with his father, and notwithstanding his multifarious duties, he always found time for the quieter pursuits of literature. He was a man of culture and refinement, and was a frequent contributor to some of the principal vernacular magazines published in Bombay. He emulated the liberality of his father as far as it lay within his own means to do so, and he evinced his deep interest in the cause of education by giving substantial aid to many schools and libraries in Bombay as well as in different parts of Gujerat. Some of these institutions owe their very existence principally to his own munificence. It is said that many poor but deserving young men have received timely and very valuable assistance from him while prosecuting their studies in schools and colleges. He was always ready to give a helping hand to rising authors in the vernacular literature, and speaking generally his compassionate heart never turned away from the appeals of the needy and distressed. He was a young man of great promise, and had he lived the native public would no doubt have received the benefit on a much larger scale of his enlightened beneficence. Great sympathy is felt for Mr. Nusserwanjee Petit, who is one of the most popular members of his community. Sir Dinshaw, who was travelling with his family in Upper India, was informed by telegraph on Friday last of the critical state of his son-in-law, and he arrived in Bombay on Monday morning. Deceased leaves no issue behind him.

The funeral took place on Monday afternoon at the residence of his father at Gowalia Tank Road. On the news of the demise of the promising young gentleman being spread in the native town early yesterday morning, several Parsee charitable institutions in which the Hon'ble Sir Dinshaw Manockjee Petit and his bereaved brother, Mr. Nusserwanjee, are more or less connected, as well as the share market, the Fort High School, the Proprietary School, Sir Jamsetjee Jejeebhoy Parsee Benevolent Institution, the Sir Dinshaw Petit Kanda Mohla and Bharucha Mohla Library, the Native General Library, and the three mills, the Oriental, the Colaba, and National, of which the deceased and his father are the agents, together with the Manockjee Petit Mill, the Dinshaw Petit Mill, the Framjee Petit Mill, the Gordon Mill, the Mazagon and the Victoria Mills, of which Sir Dinshaw Petit Sons and Co. are the agents, were closed for the day in memory of the deceased gentleman. A little after 2 p.m. a very large number of leading Parsee gentlemen commenced to arrive at the bungalow, and by 3-30 p.m. the hall and the surroundings, and its extensive compound and the gardens were filled with upwards of 3,000 Parsees, who had assembled to take part in the funeral ceremony, while the Gowalia Tank road was thronged with work people, numbering about 12,000 persons, belonging to the several mills owned by the Hon'ble Sir Dinshaw and his brother, Mr. Nusserwanjee. At 5 p.m. the funeral cortege, headed by the Hon'ble Sir Dinshaw Manockjee Petit, and followed by upwards of 1,200 Parsees, left the house for the Towers of Silence, and as the procession was proceeding on, the workmen, who seemed to be much affected, paid their obeisance to the body. The Gyan Uttajuck Mandli (the Parsee Philharmonic Society), of which the late Mr. Jamsetjee was a life member, have issued a circular to their members, intimating that the Jamshedi-Naoroz Festival, which were to take place on Wednesday has been stopped, and the evening party which was to be given on Wednesday by Mr. and Mrs. Jehangeer Cowasjee Jehangeer has also been postponed. The directors of the Sassoon Alliance Silk Mill, of which Sir Dinshaw and his brother are co-directors, also closed their mill on Monday in memory of the deceased gentleman.

At the *Uthumna* or third day ceremony performed on Tuesday large sums of money were given away in charity by Mr. Nusserwanjee Manockjee Petit, the father, and Sir Dinshaw Manockjee Petit, the uncle and father-in-law, of the deceased. Mr. Nusserwanjee and other members of his family have subscribed altogether Rs. 5,40,000 for different charitable purposes, out of which Rs. 3,64,200 will be devoted towards the establishment of an Orphanage for the Parsee community which will be named after the deceased. The balance of Rs. 1,76,000 has been distributed towards the support and maintenance of several Parsee charitable institutions, as also the several dispensaries and libraries in Bombay, and in different parts of the presidency. Sir Dinshaw Petit and his family subscribed in all Rs. 42,750 for charitable purposes, the greater portion of the amount being given to the various dispensaries and libraries in which the deceased took a keen interest. The late Mr. Jamsetjee had founded several schools dispensaries, and libraries in Bombay and the mofussil, and maintained them at his own expense. These institutions have now been liberally endowed by the father and uncle of the deceased. It is said that when Mr. Jamsetjee was ill last year he was presented by his mother with a sum of Rs. 25,000 on his recovery, which the deceased with his usual liberality gave away in charity. When he was lying ill last week, he asked his mother if she would present him with another sum on his recovery, and being asked to name the amount, he fixed it at Rs. 50,000. The deceased, it is said, promised that he would give the amount, when presented, to the schools, dispensaries, and libraries in which he took a special interest.

At the second *Uthumna* ceremony performed early on Wednesday morning the following further sums of money and valuable properties were given to different charities by Mr. Nusserwanjee Petit, the father of the deceased gentleman, in addition to Rs. 5,40,000 mentioned above —About 12,000 square yards of land, with a large bungalow standing thereon, situate at Bandora, is to be given for the purpose of a Parsee Sanitarium. The cost of this is estimated at about Rs. 50,000. Two more bungalows in Bombay belonging to the same gentleman have also been given up in charity, on condition that the rent (about Rs. 245 per month) accruing from these shall be devoted to defraying the current expenses of the sanitarium. The following amounts have also been distributed to the charities mentioned :—Rs. 1,000 in Kheirgam Fire Temple Fund ; Rs. 100 in the Fund for Poor Zoroastrian Persians residing in Bombay ; Rs. 100, Bombay Native Library ; Rs. 100, Bombay District Benevolent Society ; and Rs. 100, Fort Gymnasium.

SIR DINSHAW MANOCKJEE PETIT.

(FROM A CORRESPONDENT.)

AHMEDABAD, MARCH 18.

Sir Dinshaw and Lady Petit and party arrived here by the Rajputana train this morning. They intended staying here for some days, but much to the regret of the people here, owing to the illness of Sir Dinshaw's nephew, they left by mail to-day. A large and representative gathering of Parsee and Hindoo gentlemen was held during the day at the bungalow of Khan Bahadur Nowrojee Pestonjee Vakil, whose guests they were, to present Sir Dinshaw with two addresses, one from the public and the other from the Parsee community. Suitable replies being made to the addresses, Kaveshwar Dulpatram Dayabhai made a speech, and recited an excellent poem specially composed for the occasion. Sir Dinshaw, with his usual generosity, promised liberal support to several charitable institutions. He received a perfect ovation from all classes of the community here. The station was tastefully decorated, and numerous ladies and gentlemen met there to wish Sir Dinshaw and party a pleasant journey. The party left amidst hearty and repeated cheers.

(FROM ANOTHER CORRESPONDENT.)

AHMEDABAD, MARCH 18.

Sir Dinshaw Petit was to-day presented with an address by the honorary secretary of the Deesa Parsee Panchayet on behalf of that body. Sir Dinshaw with his usual generosity gave Rs. 1,000 towards the building of a fire-temple at Deesa. Mr. J. E. Tamna thanked the Parsee Knight on behalf of the Deesa Panchayet.

AN OFFER REFUSED.

The following correspondence has been forwarded to us for publication :—

Surat, January 2, 1888.

To the Registrar, University of Bombay.

Sir,—I propose to make over to the University Municipal debentures yielding an annal income of Rs. 150, in trust, to found a prize of that value to be called after my late father, the Haridasji Prize. It is to be awarded every year to such Gujarati candidate as may pass the LL.B. Examination of the University with the highest aggregate number of marks. The prize is not to be awarded to any candidate who may succeed in getting another prize, but must go to the next one in rank. Other things being equal, it should be awarded to a Kayastha candidate. In any year in which the prize happens not to be awarded, the interest is to be added to the principal.

2. The only condition I wish to annex to the donation is that every such candidate at the examination, whether successful or not after the result is declared, shall, on application, be furnished by the University with a copy, under the Registrar's signature, of the marks awarded to him by each examiner for each of the questions attempted by him in each set, as well as of the total marks awarded to him in each paper ; and that a general statement of all such candidates, showing the above marks, be forwarded to me during my life-time, and to my legal representatives after my death.

3. In the event of this offer being accepted, I would suggest that for the benefit of intending competitors, as well as for the information of the public feeling an interest in educational matters, all the answers of each year's prizeman be published in the next year's University Calendar.—I am, &c.

NANABHAI HARIDAS, Fellow.

No. 1799 of 1887-88.
Office of the University Registrar. Bombay, 15th March. 1888.

To the Hon. Mr. Justice Nanabhai Haridas.

Sir,—I have the honour to state that your letter of the 2nd January last has been considered by the Syndicate. In reply I am to say that they cannot recommend the Senate to accept the endowment proffered therein on the terms proposed.—I am, &c.

P. PETERSON, University Registrar.

The following telegram from the Political Resident, Aden, dated 17th inst., has been published for general information :—"Following telegram 'received from British Consul, Alexandria :—'Quarantine in Egypt against arrivals from Rangoon.' Will impose quarantine at Aden and Perim."

THE IMPERIAL STANDARD YARD MEASURE.

(FROM OUR OWN CORRESPONDENT.)

CALCUTTA, MARCH 16.

At the meeting of the Legislative Council.

Mr. Scoble asked leave to introduce a Bill to declare the Imperial standard yard for the United Kingdom to be the legal standard measure length for British India. He said :—This Bill has its origin in five communications from the Bengal, Madras, Bombay, Rangoon, and Kurrachee Chambers of Commerce, asking that the English standard yard may be declared by law to be the standard measure length for British India. The Bengal and Rangoon Chambers base their request on the general ground that it is anomalous that there should be no legal standard of length in this country while there is one in the United Kingdom, and that the absence of such a standard causes difficulties in the working of the piece-goods trade of the country. The Kurchee Chamber's representation is in similar general terms, their main ground being that in the working of the piece-goods trade in this country the standard of length is essentially necessary. But the Bombay and Madras Chambers go more into particulars, and urge the fixing of a legal standard of length on the ground that, under the existing law, marking of false lengths on cloth goods, which is not punishable, ought to be made so. The object of the Bill is to pave the way for future legislation, on the lines of the Merchandise Marks Act which came into force in England last year, and the main provisions of which appear to be quite as much needed in this country as at home.

Mr. Steel said : The proposed legislation will be generally welcomed by the mercantile community. The Bill which the hon. member proposes to introduce is a small measure, but it is a necessary preliminary to further legislation. There is a general concensus of opinion that it will be soon desirable to legislate in India on the same lines as the Merchandise Marks Bill recently passed in England ; but as that measure is of an extremely complicated character and has already developed certain faults which will require amendment, there is a general agreement that it is not desirable to institute hasty legislation in India. When full experience has been gained of the working of an English Act, and when it is decided to follow it here, the prior establishment of the standard measure will be found to have facilitated such legislation.

Mr. Peary Mohun Mukerji said : When the Government of Bengal a few months ago invited public opinion on the desirability of having a law for defining the standard unity of measure, it was apprehended in certain quarters that the intention of Government was to supersede all local measures by a uniform measure of length. The observations made by the hon. member will renew that misapprehension. The object of the Bill which he wishes to introduce is very different from what was at that time apprehended. Different Provincial Acts defined the unit of measure which should obtain in the Presidency towns of Calcutta, Madras and Bombay, but there is absolutely no law whatever for declaring what is the unit of measure outside the limits of presidency towns. It is to fill a void in the statute book that I think the present measure is intended. Perhaps, looking at discussions which took place in 1864, it would have been more desirable if the unit of the French metre had been adopted, but for the present at least we must be content with the one standard measure which obtains in the United Kingdom.

The motion was put to the vote and agreed to.

DISTRESSED SEAMEN.

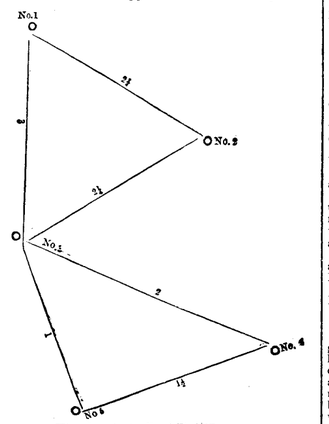

The P. & O. Co.'s steam-ship Bengal, which arrived in harbour on Monday morning with China mails, brought five distressed seamen from Singapore for London. One was Capt. R. W. Doherty, owner and master of ship Ann Myllicent, and the others were J. E. Irvine, the chief officer ; Preston, the chief engineer ; the chief steward, and one A. B. seaman of the steamer Ardgay. The Ann Myllicent, a Liverpool vessel, of 921 tons, while on a voyage from the Gulf of Carpentria for Adelaide in ballast, was lost, on the 5th January last, on a reef in the Timore Sea, in lat. 12·35 south, long. 123·13 east. The crew remained nine days on the wreck. On the 13th of January, seeing the sea moderating, they were able to go in a boat, and reached Timore Koepang on the 17th, where they were hospitably received by the Dutch authorities. Thence they started for Singapore *via* Sourabaya in the Maccalister, a Dutch vessel. At Singapore an enquiry was held regarding the wreck, and the captain was acquitted. The whole of the ship's company is waiting for passage home from Singapore. The steam-ship Ardgay was stranded at Cape Batangan on the 15th December last.

General Sir Thomas Baker leaves Allahabad on the 29th instant to take up the command of the Rawul Pindi Division from General Dillon, whose time expires on the 1st April. Major-General Lynch, his successor at Allahabad, should have arrived in Bombay by the mail steamer on Monday morning.

It is notified that the Viceroy will reach Simla, "*via* Rewah, Lucknow, Murree, Srinagar, Umballa and Pinjore," on or about the 9th May. The Viceroy's party consists of the Private and Military Secretaries, Dr. Findlay, Captain Burn and Lord Binning, Aides-de-Camp, Mr. McFerran, and the Foreign Secretary, Mr. Durand. Major Cooper accompanies the Viceroy as far as Lucknow.

CHART AND COMPASS RACE, BOMBAY LIGHT HORSE.

This competition and race, combined, was run off on Sunday last, and was won by Trooper Gordon in very fair time. Just as the ride to Poona in September last was organised and brought to a successful issue by Troop Sergeant-Major Cuffe, so the present event is entirely due to Lieutenant H. R. King. Not only did he give a cup to the winner, but undertook all the details of the arrangements. No fewer than fifty-four sets of orders had to be written for the competitors, besides orders to outposts, maps, orders to patrols, and selection of stations. In these latter arrangements Sergeant-Instructor Still gave much valuable assistance and advice. Several troopers, who might have competed, unselfishly stood down and took the various stations. To those who have hunted here the ground is very familiar, and we should much like to see all the members of the Hunt members of the corps, so that next year more might enter and compete. The following is a rough map of the different stations selected with their approximate distances apart :—

No. 1.—Was close to Andheri Station.
No. 2.—Sahar village, close to Tulsi Pipe.
No. 3.—Rifle Butts, Headquarters.
No. 4.—Black Bridge, near Coorla Dispensary.
No. 5.—One-tree Hill in line between Butts and Coorla.

Post No. 1 was in charge of Corporal Ryrie, with Corporal Greaves as a patrol on the Andheri-Coorla Road.

No. 2 was in charge of Trooper Symons. No. 3, of Lieutenant King and Sergeant Still. No. 4, of Captain Hodgkinson. No. 5, of Corporal Reddie.

Between No. 3 and No. 4, Trooper King stationed himself to see that competitors observed certain instructions as to route. His horse at the last moment having gone lame, this trooper pluckily trudged in full uniform all the way from Pali Hill and back again, and was at his post from daylight to 9 a.m.

Captain Hodgkinson, the popular adjutant of the E. V. R., gave material assistance to the interest of the race by passing practical military verbal messages to head-quarters through the several troopers as they reached him. The delivery of these messages, the report of the country, the condition of horses and riders were all taken into account in awarding the prize. The system followed here was slightly different to that in Calcutta in their recent competition. There the competitors were given all the posts at once, and knew exactly how far they had to ride. Here the riders knew nothing beyond their single instructions. They were all despatched from head-quarters (which then became No. 3 post) at different times and in different directions, each rider being sent to a particular post. At this post they were told to go to the next, and so on. Several riders, when they reached head-quarters, the first time, thought they had finished, but were promptly ordered out again until every rider had received orders to visit every post, and so to cover the same direct distance. It will be seen, therefore, that not only did each rider not know where he was going, but he also did not know when his work would be over and how far he was to travel. Hence the necessity of nursing his horse, so as to be ready for any emergency.

Time of arrival at different posts.

	Started.	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Finished.
No. 1 Trooper Maclean.....	6·22	6.57	7·15	7·27	7·55	Missed	8·15

„ 2 „ 2, 1, 3, 5, 4 and home.
„ 3 „ 4, 5, 3, 1, 2 and home.
„ 4 „ 5, 4, 3, 2, 1 and home.
„ 5 „ as number 1.
„ 7 „ as number 3.
„ 8 „ as number 4.

Trooper Gordon won by doing the round in the best time, giving the best report, and by nursing his horse carefully. His experiences in the Cape Mounted Rifles stood him in good stead here.

Cameron rode hard, but trusted rather to his own knowledge and luck than to his map and orders. He was fired upon by the patrol on the Andheri-Coorla Road.

Maclean also rode well, but unfortunately missed a post, or he would have run Mr. Gordon very close for the cup.

Cook was new to the country, or he would not have sounded the depth of the creek with his horse, and himself, too, for the matter of that. His instructions expressly warned him to beware of creeks.

It will be seen that a good deal of judgment was required, and there can be no doubt that such competitions, when not too long, are excellent training for horse and rider. The following general instructions were issued to each rider :—

You must show the contents of your several despatches to no one while on your route, and you must not speak to any European on the road, though you may enquire your way from natives of the country. On arrival at each station, a soldier in charge will hand you further orders, which you must strictly follow. You will have to give in a report of the country you pass through, whether supplied with water and forage, whether fitted for the passage of cavalry, infantry, or artillery. Should you pass a railway station, you will note whether there is rolling-stock always there, and what the accommodation for troops may be. And you will take note of anything you may hear at the outposts. Be careful in going through water or tidal ways. Avoid exposing yourself in the open. Rather seek cover, and remember the enemy are on the watch. Save your horse as much as possible. Steady wins.

And particular orders at each post as follows :—

Order I.—You will proceed in a northerly direction to Andheri Station, near which you will find an outpost, who will give you further orders after receiving your despatch.

Order II.—You will proceed in a south-easterly direction to the village Sahar, where you will receive further orders.

The road from Andheri is in possession of, and patrolled by, the enemy. Keep out of sight.

Order III.—You will proceed back to head-quarters and report yourself. Do not expose yourself in the open.

Order IV.—You will proceed in an easterly direction towards a bridge over the creek opposite Old Coorla. You must keep the church and tank on your left, and proceed with caution. This position and outpost is a most important one. Be careful.

Order V.—You will proceed south to a solitary palm on a small hill passing the church and tank on your right. Proceed cautiously, as the other side of the creek is held.

Order VI.—You will return to head-quarters at once. Beware of the tidal creek.

The orders to outposts and patrols were :—

Private Orders to Outpost at Coorla Bridge, No. 4.—In giving over your despatches to each rider as he presents himself, you will report any alarm from the enemy during the night, the condition of the troops under you, and the probability of your being able to hold out until relieved in force. You will give this report verbally, leaving the rider to take his own notes and the time when given, and you will note in your time-table what report you have given to each rider.

Order to Outpost No. 2.—You will proceed with all speed to Sahar, a village on the Tulsi water pipe in a north-easterly direction from headquarters (the Rifle Butts), and after posting the patrols and giving over to them their orders (herewith), you will take your station on the rising ground near some building and erect your flag signal. You will not show yourself too prominently You will not create any unnecessary delay. You will receive each rider's despatch, and hand him one bearing his corresponding number. You will not give him any advice, hint, or direction as to his best route. You will carefully note in time table (herewith) the moment when the rider hands you his despatch, and when he departs after receiving your's. You will in your report briefly note condition of horse and rider. After delivering all the despatches entrusted to you, you will call in the patrols and return as quickly as possible to head-quarters.

Orders to the Patrols.—You will patrol the road from Andheri station to where the Tulsi water pipe crosses it, and carefully note any rider who comes within sight, and the time when you see him. You must not leave the road yourself, but you will fire on any one who comes within range. You will hold yourselves under the orders of the outpost at Sahar, who will in due course relieve you.

The orders to posts 1, 3, 4, and 5 were similar to those given to No. 2, and need not be given in petail. As each rider finished his round he was not long in finding his way to the well filled tiffin baskets which had been thoughtfully provided, and drank to the health of Lieut. King for his enterprise and trouble. May we see another run next year, and more power to the corps in the meantime !

THE JUDICIAL SIDE.

About ten years ago, with some little parade of the importance of the measure, the North-West Government announced its intention of separating the functions of its civil officers into judicial and executive branches. There had been complaints of the deterioration of the judicial element in the administration, due in a degree to the inferior attractions of executive duty, and it was thought that by inviting men at a specified stage in their career to elect their future line, and reserving for the judicial branch two prizes, as some counterpoise to the more numerous prizes of the Executive line, more good officers having a leaning towards the Bench would be secured. And probably this result might have been more nearly reached, had not Sir Alfred Lyall sown tares amid his predecessor's wheat and—notably in the cases of Messrs. Mellor and Burkitt—broken faith with the judicial devotees, by allowing officers who had long passed the grade at which election was still optional, to cross the line. We refer to the matter here because there is rumoured to be some danger of Sir Auckland Colvin following a bad example, in bestowing on a senior Magistrate and Collector, one of the two judicial prizes already referred to, and to which he can have no manner of claim. We may regret with the Lieutenant-Governor that personal or professional unfitness should bar any man's road to the goal of legitimate promotion ; but robbing Peter to pay Paul is not a course to be therefore defended. The judicial outlook in these Provinces is anything but good : it can possibly become worse.—*Pioneer*.

It is officially announced that on and after the 1st proximo a further extension of the Sind-Pishin Railway will be opened for passenger and general traffic. The section in question which will be worked by the North-Western Railway leaves the Hurnai Line at the Bostan Junction and, passing through Sirinan and Gulistan Karaz, terminates at Killa Abdulla, a point near the Afghan frontier on the road to Kandahar.

CORRESPONDENCE.

IS THE MUNICIPAL COMMISSIONERSHIP NECESSARY ?

TO THE EDITOR OF THE TIMES OF INDIA.

Sir,—I am jealous of your unknown correspondent, because he is the first person, if we except a hint in a leading article of the *Rast Goftar* of 5th February, who has ventured to say what, as all my friends know, has long been my settled opinion and that is that the appointment of Municipal Commissioner is not merely not necessary but that it is an actual evil, and a check on effective executive action ; that, in fact, it is not only a fifth wheel to a coach but a fifth wheel and drag as well, so far as getting work done is concerned. The abolition of this appointment is not only inevitable, but, as your correspondent points out, most desirable. I do not hesitate to say that I defy any man to point out to me any work at present done by the Municipal Commissioner that would not be as well and more quickly done if the Commissionership were abolished.

The question is so important, that I feel sure you will pardon my addressing you at inordinate length. Those persons who assert that the appointment is necessary do so, as I understand, on the following grounds :—

(*a.*) That it is necessary to have a head of the Executive.

(*b.*) That such a course tends to produce directness and celerity in executive action.

(*c.*) That it fixes responsibility.

(*d.*) That it ensures continuity of policy.

(*e.*) That it is desirable that the outside public should have some individual to deal with.

I will, with your permission, proceed to examine these positions :—

First, then, as to the statement that it is necessary to have a head of the executive. Now, Sir, I meet this statement with a distinct negative. I cannot see why, if such a person be not necessary in the Port Trust, if he be unnecessary in the great railway companies, for it must be remembered that the agents are not heads of the executive at all, but the embodiments of the boards of directors, and only exist because the boards of directors are in England. I say I fail to see why he should be necessary in the Corporation. I need scarcely point out that the Chairman of the Port Trust is not executive at all, and that he performs all his duties on the responsibility and under the orders of the Trustees.

Secondly.—I deny that the existence of the Municipal Commissionership does cause executive action to be better and swifter : indeed, I do not hesitate to assert that it does the very reverse. It simply imposes one more channel between the real executive officers and the governing body greatly to the detriment of both and to the delay of business ; and it furthermore lowers the position of the most important of the Municipal servants, and wastes their time. For what happens if, for instance, an engineering question has to be brought before the Corporation ? After elaborating the scheme, the Executive Engineer is unable to come in person before the Town Council and explain it. No, he must spend hours of valuable time in trying to make the Commissioner grasp it, which the latter very imperfectly does. The Commissioner then has to explain what he believes to be the case to the Town Council, and then it finally comes to the Corporation. Can any reasonable man deny that it would be shorter in time and better as well if the Executive Engineer himself dealt directly with the Town Council ? Anyone who has heard the Commissioner struggle with either an engineering or an accounts question will understand what I mean.

Thirdly.—I distinctly assert that so far from fixing responsibility the present system has an exactly opposite result, for it pretends to fix responsibility on one whom no reasonable man can hold to be responsible in fact. The present law and the dropsical Bill at present under consideration declare that the sole executive responsibility rests on the Commissioner. Now what does that mean ? If the whole responsibility rests on the Commissioner it is obvious that there is none left to rest on anybody else. So that we arrive at this result, that the Executive Engineer and the Executive Health Officer, and the Executive Engineer for the Tansa Water Works are in law not responsible at all. Yet can any one say that if either of these officers failed grossly, the Commissioner could be really held responsible ? It also follows that the Executive Health Officer and the Executive Engineer, though appointed by the Corporation, are not responsible to them, and, though responsible to the Commissioner, cannot be dismissed by him. It further removes reponsibility from them that they have no means of getting their opinions on matters connected with their departments known.

Fourthly.—It is admitted by the Bill at present under consideration, that the duty of laying down lines of policy lies with the Corporation, so that the existence or non-existence of a Commissioner does not affect the question. And even if one whole time man did effect this object, it is more likely to be obtained if that man be a permanent servant of the Corporation and not a gentleman liable to leave whenever Government like or a better appointment offers.

With the last reason that the public must have some individual to deal with I fully concur, but let him be such a person as the Port Trustees or the great Railway Companies have, and not a so-called head of the executive, who in fact does no executive work. Now, Sir, as your correspondent points out, the Corporation have at present such a choice time officer, namely their clerk, and if more be wanted, let us have a whole

time chairman of the Town Council. Nor can it be urged that the Town Council are too big a body, for they are in fact a smaller body than the Port Trustees. And if I know the Corporation at all, they would be willing to trust a Town Council elected by themselves with any amount of power, provided that power were derived from them.

I would here point out that Mr. Ollivant himself felt that the Commissionship *must* go, as he showed in a very remarkable letter addressed to Government in May 1883, (see pp. 101-5, Government Compilation, No. 178, New Series). Though I do not agree with the methods he proposed, I entirely agree with the main truth involved. With the disappearance of this useless office all misunderstanding and friction would vanish, and the Municipal executive officers would feel that they were really responsible for the great departments over which they preside. Whilst the absurdity of an officer paid by the Corporation, pretending to be somebody else's servant, and looking to some other power, would cease. Nor would it be a small gain that the elephantine and clumsy Bill now before the Legislative Council would at once lose a good half of its section, which would then be needless.

It is surely a sad and instructive fact that on the very day that the Bombay papers report a meeting of the Legislative Council, at which a cumbersome section setting forth an elaborate procedure that the Corporation must follow in order *collectively* to see its own documents, those same papers should contain a notice of a ruling of the Government of Madras to the effect that the *individual* members of the Corporation of Tirapati had a right to inspect all documents belonging to their Corporation.—Yours, &c.

H. O. SELBY.

MUNICIPAL AFFAIRS.

TO THE EDITOR OF THE TIMES OF INDIA.

Sir,—I am very sorry to have to ask you again to give me so much room in your paper. I will commence with "Outsider's" letter, which is evidently intended to be very fair, and it is, I submit, a proof that there was great necessity for mine. I believe I was present at every meeting of the Corporation for the discussion of the Municipal Bill, and though I admit that some sharp and hard things may have been said on both sides, and that certain views and some speeches outside the Municipality were severely criticized, I do not remember to have heard any "attack on Government" of such character as that to which "Outsider" refers; while I did hear many expressions of confidence in the ultimate justice of the Government decision. It is but fair to the Corporation that this should be understood, for indeed personally I believe that at first much was said in favour of the Bill in ignorance of its real character, which the same speakers with their later knowledge of what were its original provisions would not now repeat. I am afraid that, although I tried to be explicit, I have not been entirely understood. The Hon. Mr. West is reported to have very justly pointed out that hard words are sometimes apt to be *written* when a discussion is being carried on, and I submit that during a debate they are still more likely to be *said*, and it would be very difficult to decide what constituted fair criticism and what was an unjustifiable attack (*vide* "Outsider's" letter), and, indeed, the very manner in which a thing is said, or even the turn given to a sentence in any précis of a speech would affect the decision. Affairs in which Government are more or less interested must often come before the Corporation for discussion, and I do admit that there have been some, in which I do not think the Government view, as put before us, was right; and similar cases may occur again. Am I at liberty to say so without being accused of an unbecoming attack on Government? Is it an unbecoming attack to criticize what may be said in Council or in public speech? In short, am I to consider myself for the time being in the light of a Municipal officer only?

There is, however, another point which I had in mind when I last wrote, but which I did not mention, deeming it better to deal with the question on broader grounds. As I said in my former letter, no man can object to criticism of his public actions or speeches, and should give as good as he takes; but many of us are not only Government nominees and Government servants, but are also officers. Now as long as I have the honour to hold her Majesty's Commission, I keenly resent the very slightest insinuation affecting my loyalty to the Government I serve, simply because I may, as a member of a civil body, object to some Government action, or criticize some speech made by a member of the Government. Some people may smile and think I am over-sensitive. I do not think so, and I am sure others similarly situated will understand my feelings. I do not like snirking work I have promised the Government to undertake, without very good reasons; but if my seat on the Corporation is likely to be in any way incompatible with my position as an officer, I must resign the said seat; and it, of course, follows that if I am, for such reasons, unable to sit as a Government nominee, I most certainly should never dream for a moment of standing for election by the Justices or ratepayers. I should simply wash my hands of the whole concern. The Government have doubtless always given the greatest freedom to their nominees, and some people may, therefore, think I have made a mountain out of a mole-hill; but it is not so, for it is a point that I know others, besides myself, consider important. I at one time thought of writing officially and personally to Government, but when I found that various opinions were expressed on this point wherever any body of men discussed the question, and that reference was publicly made to it, I thought it fairer to us and more likely to do good if it was publicly ventilated. I did not, therefore, ask (as "Outsider" appears to think I did) for anything so silly as the Government approval of any "attack" which I never even knew took place, but I suggested that it would be a graceful act *to let us know if we were supposed to support any particular line of policy*. It appears to me that at present we are placed in an unfair and false position, and that if there is any doubt on the subject, it might be advisable at once to settle it, or even to make it illegal for any officer to sit on the Corporation. As to those sections likely to interfere with private rights in property and private interests, I can inform "Outsider" that *every* section in the Bill was carefully considered, and that the principle which guided us was as follows:—Let the control of the Corporation, as the representative body, in the first place, be made *real*, and this once done, in all such sections, as those to which "Outsider" refers, let an appeal to either the Town Council or Corporation, as the case might be, be provided, and such appeal should then be sufficient to prevent abuse of the great powers necessarily given to the Executive.

So much for "Outsider's" letter. And now to another subject; but before I deal with it I wish to say that I do not look on it as a political question, and, indeed, I cannot understand why some persons look on the question as if it was one of any political significance. The Municipality is a large business concern, and we have to consider the best and most practical method of getting the work done. The Government decided years ago that the city was to be managed by a representative body, so we need not discuss the question of local self-government, and the Corporation are fully aware that the advancement of India and the very existence of their own Municipality is due to the justice of British rule; or, to put it practically in another way, they might shout as long as they liked, but they would never raise large loans for the city or their industries, was it not for the guarantee of stability afforded by the presence of the British Government. I wish to say I entirely agree with Major Selby in his view that the appointment of the Commissioner is not necessary. He and I have often talked over this matter. I am of opinion that the present municipal constitution is radically wrong in this respect, that the present Act is terribly defective, and that the proposed Bill should (as the Corporation has already pointed out) be put in the waste paper basket. The appointment of the Commissioner, as at present constituted, is to my mind absurd. Here is a huge business concern in which the Commissioner is a Government servant and a Municipal servant, and at the same time not wholly either. He is torn asunder in trying to serve two masters. He works himself to death in trying impossibilities, and simply because the appointment is misunderstood. I am always sorry when I am not able to support the views of the Commissioner; for I feel when he has been working hard, he must at times be inclined to exclaim, like Moses, "I am not able to bear all this people alone, because it is too heavy for me." Indeed, Jethro's advice would very often be the best to give to the Commissioner:—"The thing that thou doest is not good, thou wilt surely wear away both thou and this people that is with thee: for this thing is too heavy for thee, thou art not able to perform it thyself alone." But, unfortunately, although men are paid to assist the Commissioner, he, unlike Moses, prefers to wear himself away. Nothing could illustrate this fact better than the speech of the Hon. Mr. Naylor. It struck me that not only did the hon. gentleman's speech tend to prove that a Deputy Commissioner was *not* required, but that the Commissioner need not in any way be so hard worked, and that the Commissioner made an inordinate amount of work for himself. The more zealous the Commissioner, the more easily does he fall into this error. I think the present municipal procedure causes immense delay, is unwieldy, and unpractical. Again, by the peculiarities in the Act, all sorts of strange inconsistencies arise. The Corporation have certain powers of sanction and control, and pass a resolution almost unanimously in favour of certain action; but we are told that it is also legal for the Commissioner to stand up and say, "You may rule what you like; but, as I don't agree with you, I won't obey your resolution." This is more or less a serious matter. Government has hard work enough, as it is, to find gentlemen who will sit on the Corporation; but unless this sort of thing is made impossible, I should imagine no one will consent to serve. Members will not stand it, and will not give up their time at great inconvenience to themselves, if such is to be the result of their labour.

There are many other practical points to which I need not refer, as Major Selby dealt with them, and I agree with him that the proper constitution would be to have a paid chairman of the Town Council. Mr. Ollivant's idea of committees is nothing like the same thing, and for an important reason, that it contemplates the existence of a Government official as at present, *i.e.*, serving *two* masters. It is essential that the paid chairman of the Town Council be a municipal servant, pure and simple; he should be appointed by the Corporation, paid by them and their servant and their representative in all business matters. By such procedure all the friction regarding correspondence would vanish, and he would be obliged to stand as the advocate, not of his own views, but of those of the Council that had instructed him. I would, of course, like Government to have great powers of control. Indeed, I would give them by the Act power to carry out searching enquiry, whenever they saw fit, to come down on the Municipality and take the whole thing over, if necessary, in short to make what have been styled the "bludgeon sections" as strong as possible; but these sections should not be drafted so as to allow of petty interference, which is only annoying and delays practical results. I am certain that with a constitution such as indicated there would be no necessity for the Government to find fault. Friction would cease, responsibility would attach in a clearly defined manner to the proper officers, their opinions would be heard, and good officers prefer that it should be so. The chairman would, in fact, be in a somewhat similar position to the agent of a board of directors, and the work would be carried on smoothly, rapidly, and efficiently. I do not wish it to be thought I am commenting on any efficiency in the past. I only say, be it what it may have been in the past. I feel sure that under such procedure as that suggested it would be infinitely better in the future. I am also of opinion that such a constitution would give the public and the Government the command of the services of the best men in the city for the Corporation, many of whom will not now serve because they consider the thing a farce. I think the view taken by the Legislative Council of allowing Government to institute an audit when they think necessary a wise provision. I have an impression that if a Government audit was carried out for many years past, the result would not be such as Government examiners and controllers would approve.

One more point, Sir, and I have done, and to me it appears perhaps the most important. Pass any Bill, argue about various powers, discuss as many details as you like, the whole thing appears to me futile if there is no independent controller. There should be a very strong, experienced, independent, well paid man in that post, who of his own will may report direct to the Corporation, as men similarly connected with railways report, if they choose, direct to the board of directors, independent of the agent. There is not one man of business to whom I have spoken, not one man connected with railways or any large work, that has not said the same thing; and the hon. member, who is a man of business on the Legislative Council, took a similar view. In my humble opinion, if there is no strong independent man as controller, the Corporation might as well pass any budget they may have placed before them, and then disappear for the rest of the year.—Yours, &c.

GERALD MARTIN.

PANDIT BHAGWANLAL INDRAJI, PH. D.

TO THE EDITOR OF THE TIMES OF INDIA.

Sir,—I have just read your leading article this morning with a feeling of the deepest sorrow. I had arranged to start, after breakfast, to see my old friend, Pandit Bhagwanlal, and that article tells me he is no more. I can only sigh for "the touch of a vanished hand and the sound of a voice that is still." It is more than twenty years since the late Dr. Bhau Daji told me he would like to introduce his young Pandit, and brought him to my house one evening. How well I remember the modest little man as he sat by my table and explained to me many things that I put before him. Our friendship began then and continued till death. When I got from my friend Captain Deane the impression of the new Asoka inscription, I had it photographed at once and sent him a print and another to Dr. Bühler. He was some time in replying, but soon after M. Senart left me at Mathura, I received at the same time an acknowledgment of it from him, stating that it was really the twelfth edict, and from Dr. Bühler a full translation of it with notes, which is in the printer's hands. The Pandit was then engaged on a long paper on the Kshatrapa coins and inscriptions, which I had been urging him for years past to complete, and he hoped to be able to hand it over to me this month to take home and have printed in the Journal of the Royal Asiatic Society with autotype plates of the coins, &c. This I willingly offered to do, and hoped to have seen to-day the state of the MS. and to have learnt from his own lips his wishes respecting it. What may now become of it I know not. The Gujrati version, he told me, when I last saw him, was about complete, and had only to be translated; and this he was working at when I heard from him last month. All Orientalists will mourn his loss, for Bhagwanlal was no amateur. He was a born archæologist, and from the time he was a small boy, when Captain Lang at Junagar called him his "young Antiquary," he had devoted his quick eye and clear receptive mind to this chief study. Before his illness he was often with me in camp, and so gentle, pure, and loveable a human soul I have seldom come into such close contract with.—Yours, &c.

J. BURGESS.

THE JUDICIAL AND REVENUE DEPARTMENTS.

TO THE EDITOR OF THE TIMES OF INDIA.

Sir,—Allow me to thank you for your vigorous articles in your issues of the 14th and 17th of March on the subject of the injustice which is being done to the Judicial Department and to the public at large by the pitchforking of semi-officers of the Revenue Department into judicial posts, without any long judicial experience, and sometimes without any election on their part. To me it seems a case of "head I win, tails you lose," because while the revenue officers can obtain promotion in their own department, as well, as it seems, in the judicial, the judicial officers are not at liberty to pass from their own department to the Revenue Department, and find themselves, when eligible for promotion, suddenly superseded by revenue officers of much less standing in their line.

Thanking you, again, for your advocacy of a just cause, I am, &c.

X. Y. Z.

TEMPERANCE WORK IN THE ARMY.

TO THE EDITOR OF THE TIMES OF INDIA.

Sir,—Permit me to offer one or two comments on your very excellent article regarding General Roberts' speech at Meerut, "Temperance in the Army." As general secretary of the Army Temperance work, I am honoured by receiving the entire confidence of the Commander-in-Chief in India concerning this work, and being in frequent communication with him, know precisely what his opinions are, and what he wishes the aim and object of the Army Temperance Association to be. You have misunderstood two of his remarks, and as your paper is so widely read, your comments might do an injury to the work in the army, which, I feel sure, you would be the first to regret.

You deprecate the introduction of any religious element into the work, simply because his Excellency called upon chaplains generally to forward the work. It is not intended that the room used by the Temperance men shall be an arena for theological controversy, or that the various clergy shall preside at meetings of the association when it meets as a whole. Ample opportunity will be afforded the clergy generally to deal with their *respective* men on the religious side of this temperance question, pre-supposing, of course, that the chaplain exhibits commonsense, tact, and discretion, and the men *good* sense in wishing this to be done, for it must be remembered the work is a *voluntary* one, and unless the respective clergy are known to their *own* men, not only as their religious teacher and priest, but as their guide, philosopher and friend, his influence for temperance and total abstinence amongst them will be very little. In the churches, church rooms, prayer rooms, &c., &c., where the clergy gather their men around them, surely, then, they have grand opportunities for pushing home the obligation of a pledge, which, as in our case, is always taken, "by the help of God." Neither will this preclude the *men* from inviting their clergy to their great meetings if the speaker is known as a practical worker amongst them. The cut of his religious jib will not be criticised, or will the man himself dream of using such a position for unworthy purposes.

It is not intended to do away with the canteens, in the sense you so deprecate. That relic of barbarism, as the Chief called it the other day, the *drinking shop per se*, will be done away with as much as possible, for there can be little doubt but that it was nothing else than this, a rough table or two, with their accompanying forms, and a hat peg or so. This represented the furniture, huge iron bars separating the liquors from the men, behind which the canteen sergeant and his assistant worked, looking really as if they were "*in* for three months," nothing for the men to do but to come in and *drink*.

The canteen now is to be an accessory to the refreshment-room close by; in other words, the restaurant principle is being introduced, greater facilities for *eating* will be afforded, for all know when eating and drinking are combined, intemperance in drink is much lessened. Moreover, I feel quite convinced that the men will more and more *feel themselves*, to use an expression, and that *in time*—may be a long time yet—a truly *temperate* zone will be reached, and drunkenness, apart from its other and most important aspects, will be looked upon as *bad form* amongst gentlemen using the latter word in the old fashioned sense, "that a gentlemen *is*, as a gentlemen *does*." Apologizing for thus trespassing on your space.—Yours, &c.,

E. T. BEATTY, Secretary,
Soldiers' T. Ab. Association.

Poona, (on tour) March 17.

THE MUNICIPAL BILL.

TO THE EDITOR OF THE TIMES OF INDIA.

Sir,—I see that the Hon. Mr. Naylor holds that Mr. Ollivant took his idea of committees from a minute by Mr. Javerilal in which I concurred. A reference to p. 102 of the Selections Mr. Naylor speaks of will show that Mr. Ollivant took the idea with a difference. The committees proposed by Mr. Javerilal were to work with, and in subordination to, the Town Council as a whole. Mr. Ollivant's committees were to take the place of the Town Council, which body would, to use Mr. Ollivant's words, "naturally disappear."

I took the strongest objection, giving my reasons to Mr. Ollivant's scheme the moment I heard of it, both verbally to Mr. Ollivant himself, who was good enough to consult me, and in a letter written at the request of the then Private Secretary. The matter is not, of course, of any importance. But I should have played a sorry part if it could be shown that I have attacked a scheme which can be traced to myself. I hope my friend Mr. Naylor will see that this is not so.—Your, &c.

P. PETERSON.

SECOND VISIT OF A PARSEE CRICKET TEAM TO ENGLAND.

TO THE EDITOR OF THE TIMES OF INDIA.

Sir,—Before proceeding to England, the members of the team think it advisable to lay before the cricketing world at large the project of this second visit:—

1st. To improve in cricket, not merely practically, but scientifically, by keenly watching the play of the chief exponents of that noble game who have, from time to time, made names for themselves; and on the return of the team, to be the means of infusing new life into those devotees of cricket who have not, like ourselves, been fortunate enough to study the game in England.

2nd. To promote an assimilation of taste and habits between the English and the natives of India, by carefully studying the English manners and customs; and on our return to show our friends the advantages derived by moving in different English circles.

3rd. To pay a visit to Great Britain and Ireland and to the Continent in the most economical way possible.

This, however, is not all. We intend also to leave two or three members of the team behind in London to acquire academical honours, and one member will be specially deputed to the care of a well-known professional to study cricket.

From the above it will be seen that our intended trip is not at all suggestive of a trading concern or a personal speculation, as some people suppose. This second team is determined to offer a stubborn defence against their opponents in England; and relying on our strength, we venture to assert with all humility that we will win some of the county clubs and thus retrieve the honour of Indian cricketers, which unhappily was lost by the visit of the first team in 1886, who, however, cannot be considered as representatives of the Parsee clubs in Bombay, as it is a patent fact that the team referred to was an inferior one and was not composed of the cream of cricketers then in Bombay, as was proved in a letter written to the *Times of India* on the 3rd January, 1887.

In conclusion, we hope and believe that English sympathies will be with us, if for nothing more than our enterprizing spirit—a spirit for which our forefathers have gained a great name and fame. For that spirit alone we hope to be treated by Englishmen with all kindness and courtesy and with the usual fraternity and loyalty of Parsees. We trust we shall win the hearts of the whole English community.—I am, &c.,

P. D. KANGA, Secretary to the team.

This year the team has been drawn from all the leading Parsee Cricket Clubs, and it is expected that the results of its operations will be somewhat different to those achieved on the visit of the former team to the home of cricket. The following is a list of the engagements as at present arranged:—

JUNE.			
F 8	Leyton	v.	Gentlemen of Essex.
M 11	Blackheath	v.	,, Kent.
F 15	Kennington Oval	v.	,, Surrey.
M 18	Chiswick Park	v.	,, Middlesex.
F 22	—	v.	
M 25	Southampton	v.	,, Hants.
F 29	Brighton	v.	,, Sussex.
JULY.			
Tu 3	Hastings	v.	Gentlemen of Hastings.
F 6	Portsmouth	v.	United Services.
M 9	Leicester	v.	Gentlemen of Leceistershire.
F 13	Manchester	v.	,, Longsight.
M 16	Stoke-on-Trent	v.	,, Staffordshire.
F 20	—	v.	
M 23	Liverpool	v.	,, Liverpool.
F 27	Lord's	v.	,, Maryl ebone Club.
M 30	Northampton	v.	,, Northampton-shire.
AUGUST.			
F 3	Bournemouth	v.	Gentlemen of District.
M 6	Norwich	v.	,, Norfolk.
F 10	Kennington Oval	v.	,, Surrey.
M 13	Eastbourne	v.	,, Eastbourne.
F 17	Leyton	v.	Eleven of Public Schools.
M 20	Lord's	v.	Gentleman of Maryle bone Club.
F 24	Selhurst	v.	Gentlemen of East Surrey.
M 26	Scarborough	v.	Gentlemen of Scarborough.
SEPTEMBER.			
F 1	—	v.	
M 4	Birmingham	v.	Gentlemen of Warwickshire

DEPARTURE OF H. M. S. CROCODILE.

Her Majesty's troopship Crocodile, 4,173 tons, Capt. R. Evans, sailed on Saturday, for England, with 55 officers, 17 ladies, 15 children, 862 men, 74 women, and 169 children connected with different regiments. Some of the troops were brought from Deolali yesterday morning. The remaining portion of the details will arrive this morning. The following are the names of officers and their families:—

Col and Mrs A A Le Mesurier and child, Liverpool Regt
Col and Mrs B Field and two children, Warwick Regt
Col and Mrs F B Stephen and four children, Rifle Bde
Surg-Major and Mrs A Morphew and two children, Bl Med Ser
Surg-Major and Mrs F Dick, Ms Med Dept
Lieut-Col A H Murray, R A
Lieut-Col T F Todd, Wiltshire Regt
Surg-Major Buchanan, Bl Med Ser
Hony Lieut-Col and Mrs J Robertson and child, Retired List
Major S G Marryat, Manchester Regt
Major and Mrs M H Archdale, 17th Ms Lanc
Major and Mrs E B Mostyn, Bl Fus
Surg and Mrs J C Dorman and three children, Bl Med Ser
Surg H J Peard, Bl Med Ser
Capt D de Houghton, N Lanc Regt
Capt J B Rainsford, Worcestar Regt
Capt W A Plant, R H A
Capt the Hon H C Hardinge, 4th Rifle Bde
Capt C F Cromie, Hampshire Regt
Capt J C Wardlaw, Border Regt
Capt and Mrs A G Brathwaite, Nor Fus
Capt and Mrs A St J Seton and child, Liverpool Regt
Capt G L W Grierson, R A
Lieut and Mrs E F H McSwiney and child, Bl S C
Lieut C T Head, R A
Lieut R O G Stuart, R A
Lieut F R Johnson, R A
Lieut A B N Churchill, R A
Lieut J C Bower, R H A
Lieut and Mrs C H M Hitchens and child, Ms S C

The Viceroy will hold a Levée at Lucknow on the 6th of April, and as many as possible of the Bailey Guard men will be presented to his Excellency. It is not known exactly how many survivors there are, but the following will probably be present:—General H. Palmer, Mr F. Lincoln, Mr. M. R. Joyce, Mr M. Nazareth, Mr. A Quieros, Mr E. Quieros, Mr. Bell, Mr. A. Alone, Mr D. Braganza, Mr. J. Braganza, Mr. Forbes, Mr. J Staunton, Mr. H. Dubois, Mr. E. Hilton, Mr. J. Sinclair, Mr. Ward, and Mr Best.

THE CAZEE OF BOMBAY.

About 300 Mahomedans gathered in the house of Mr. Hajee Ibrahim Nooranee, at Chinchpoogly, on Monday night, to witness the presentation of a congratulatory address to Cazee Sheriff Adbul Latiff Londay by the Anjuman-i-Abbab for the honour conferred on him by Government in raising him to the dignity of Shumsul Ulma. Among those present were H. E. Mirza Kuli Khan, the Persian Consul, H. E. Ibrahim Bey, the Turkish Consul, Mr. Hakim Mahomed Hossein, Dr. A. T. Hakim, Kazi Shaik Mahomed Murgay, Khan Bahadoor Goolam M. Moonshi, Messrs. Hajee Hossein Hajee Essa, Hajee Ismail Fudla, Currimbhoy Ibrahim, Hajee Cassum, Syed Zenal Abadin, and Mahomed A. Kurrim.

The proceedings were opened by the *moulat* ceremony, on the conclusion of which Mr. Hakim, the vice-president of the Anjuman-i-Abbab, addressed the assembly in Urdu. He thanked them for their attendance at so late an hour (10-30 p.m.,) but he was sure that on an occasion like that, they did not mind a little personal inconvenience. They had met to present their beloved Cazee with an address of congratulation for the honour conferred on him by Lord Dufferin, in bestowing on him the title of Shumsul Ulma, *Anglice* the Light of Learning. This title was created by her Majesty during the Jubilee rejoicings, and their Cazee was the first Mahomedan in the presidency who was marked out for such distinction. It was a matter of very great gratification to the Mahomedans of the presidency that the Government had shown its appreciation of the merits of the Cazee, in thus conferring on him a title which signified the attainment of a pre-eminent position among the learned. They were to be congratulated that her Majesty had appointed over them rulers who had made themselves acquainted with all the ins and outs of every community. (Applause.)

Mr. M. A. Kurrim, the secretary of the Anjuman-i-Abbab, then read the address. From it, it was learned that the Cazee Abdul Latif, began life in Government service in 1850, when he was appointed *muftigiri* of Sholapur, from which place he was transferred to Ratnagherry in 1856. In 1864 he was pensioned by the Government, and two years later, by the unanimous vote of the Mahomedan inhabitants of Bombay, he was elected Cazee of the city. For the last twenty-two years he had discharged his duties in that responsible post with great zeal and ability to the eminent satisfaction of the Government and the people. The Mahomedan public took this occasion to express their feelings of joy and gratitude for the honour done to their Cazee, and prayed that he might be long spared to enjoy it.

The address was enclosed in a velvet cover, and presented by the Turkish Consul to the Cazee, who, in a few words, returned thanks for the distinction for which he was singled out by the Anjuman-i-Abbab.

Mr. Reaz-ud-din Ahmed said that in honouring their Cazee, the Government had not only honoured the Mahomedans of this part of India, but the Mahomedans throughout the country. He need hardly tell them that the Cazee was richly deserving of the title. There was one circumstance in this gathering on which he could not but congratulate the Mahomedans of Bombay, and that was the presence of the representatives of two of the largest Mahomedan states in the world, *viz.* Turkey and Persia. Their presence was an honour to the Mahomedans of this part of India, and marked the unity of feeling which animated Mahomedans all over the world.

The Persian Consul added his felicitations to those already offered to the Cazee. He said that he was pleased to see the unity which existed among the Mahomedans of Bombay, which, he trusted, they would ever preserve. He was sorry that he was going to leave them so soon, but he assured them that he would always remember with satisfaction all that had taken place that evening.

The Turkish Consul offered his congratulations to the Cazee, and expressed his sense of the honour the British Government had conferred on all Mahomedans in Bombay in thus honouring the Cazee.

The proceedings then terminated.

The Viceroy's dates are now definitely fixed up to the time of his arrival at Lucknow. His Excellency's special train will leave Howrah at 9 a.m. on the morning of the 30th instant, and stopping for the night, will reach Sutna on the 1st April, the road being taken there for Rewah. The party leave Sutna again on the 5th and arrive at Lucknow the same evening. Major Barr is said to have several tigers already marked down in the immediate neighbourhood of Rewah.

The column which under Captain Triscott, R.A., has been exploiting Mogoung and the extreme north of our possessions in Upper Burma, has returned to the Irrawaddy, striking the river at Katha below Bhamo, and will now be broken up. On its return journey the column has made a wide detour to the west, taking in the Endawgyi Lake, and its experiences on the march through this almost unknown country must have been exceedingly rough as well as exceedingly interesting.

His many friends will be glad to learn, observes an Allahabad paper, that Sir Lepel Griffin is about to take furlough, but not to retire from the service as was supposed. There is an admitted dearth of Indian officials just now fit to take the chief places, and he can afford to bide his time. Meanwhile, moreover, with Gwalior in need of careful nursing, Indore on the eve of revolution, and Bhopal bent on her own discomfiture, the responsibilities of the Governor-General's Agent in Central India are enough for the ambitions of any man.

BOMBAY.

Mr. S. M. Fraser, C.S., will do duty as Assistant Collector, Khandesh, till further orders.

Mr. A. E. Hight, Assoc. M. Inst. C.E., will act as Executive Engineer for Irrigation, Khandesh.

Mr. T. Summers, Assistant Engineer, First Grade has been allowed furlough for twelve months.

Brigade-Surgeon W. Graves has been brought on the strength of the British force in the Bombay Command.

Mr. J. R. Price, Assistant Collector, Sind Commission, has been allowed furlough, on medical certificate, for one year.

Mr. A. F. Maconochie, C.S., Assistant Collector, Ahmednugger, has been allowed furlough, on medical certificate, for one year.

Mr. H. W. J. Bagnell, C.S., Assistant Collector, Kolaba, has been allowed privilege leave of absence for three months.

Mr. F. Gleadow, Deputy Conservator of Forests, Fourth Grade, has been allowed furlough for eighteen months.

Surgeon F. F. MacCartie, B.A., M.B., Health Officer of the Port of Bombay, has been allowed furlough for eighteen months.

Mr. A. Davidson, Assoc. M. Inst. C.E., is to be Executive Engineer, Nasik, *vice* Mr. G. O. W. Dunn, who has gone on furlough.

Mr. J. W. P. Muir-Mackenzie, C.S., has been appointed Second Assistant Collector, *vice* Mr. A. B. Steward, C.S., promoted.

Lieutenant-Colonel W. Laing, General List, Second in Command, 13th Bombay Infantry, has been granted furlough for one year.

Mr. A. B. Steward, C.S., has been appointed Judicial Assistant to the Political Agent, Kattywar, in the place of Mr. G. C. Whitworth.

The services of the Rev. T. F. Dale, M.A., have been replaced at the disposal of the Government of the Punjab, with effect from the 15th March, 1888.

Mr. A. C. Logan, C.S., Forest Settlement Officer, Ratnagherry, has been allowed privilege leave of absence for three months.

Mr. J. H. Grant has been permitted to resign her Majesty's Covenanted Civil Service on the Bombay Establishment, with effect from the 31st January, 1888.

Mr. E. Lawrence, C.S., to act as Under-Secretary to Government, in the Revenue, Financial and General Departments, during the absence of Mr. J. DeC. Atkins, C.S.

Colonel W. H. J. Stopford, Bombay Cavalry, Commandant, 5th Bombay Cavalry, has been granted leave out of India, on medical certificate, for one hundred and eighty days.

Surgeon-Major A. Barry, M.D., Indian Medical Service, has been promoted to Brigade-Surgeon, with effect from the 26th February, 1888, *vice* Turnbull, promoted to Deputy Surgeon-General.

Surgeon-Major J. W. Clarkson, Indian Medical Service, Deputy Sanitary Commissioner, Western Registration District, has been allowed furlough to Europe for one year on medical certificate.

The result of the fresh balloting at the Chamber of Commerce on the 15th inst., for an elective Trustee of the Port of Bombay, was that Mr. H. W. Uloth, Superintendent, P. and O. S. N. Co., was elected.

Captain F. D. Raikes, C.I.E., having completed twenty years' service, six of which have been in the Staff Corps, has been promoted to Major from the date specified, subject to her Majesty's approval.

Lieut.-Colonel H. C. Baggallay has been permitted to resign his commission in the Poona Volunteer Rifle Corps. Major W. H. Propert, C.S., succeeds him in the Command, and Captain H. G. Meakin has been promoted to Major.

On the 14th instant Sir Salar Jung, accompanied by his suite, arrived in Bombay from Aurungabad. He left for Poona *en route* for Mahableshwur on the 15th instant. During his short stay here Sir Salar put up at the Fitzgerald Hotel, Byculla.

It is probable that Major J. Davidson will officiate as Deputy Secretary in the Military Department for Colonel Toker, when the latter leaves to officiate for Colonel Jarrett on the Board of Examiners. Major Davidson acted in the Military Secretariat a few years ago, and subsequently at Army Headquarters, and made his name in both offices.

We learn that his Excellency Haji Mirza Hussain Cooly Khan, the popular Persian Consul-General, has been offered a higher post in Teheran by his Imperial Majesty the Shah. The Consul-General will consequently leave Bombay immediately after the "Jamshedi Nowroz" (21st March) for Persia. Mr. Dadabhoy Rustomjee Banajee, the present Vice-Consul, is, we understand, appointed to act as Consul and take charge of the Consulate, which will be removed to his residence, Nawab's Tank, Mazagon, until the arrival of a new Consul-General from Teheran.

On Sunday morning, Colonel Marshall, Private Secretary to H. H. the Nizam, arrived in Bombay from Aurungabad. He was met at the Victoria Terminus by Nawab Dilkar Jung. The Colonel has at present put up at the Esplanade Hotel. In the course of the day Nawab Khoorshed Jah Bahadoor, the Ameer-i-Kabeer of Hyderabad, paid him a visit at the hotel.

The Bombay Municipal Corporation, at their meeting on the 15th inst., sanctioned the construction of several new works out of the available balance of a lakh of rupees granted by them on the 1st instant. The works were sanctioned to be paid for out of the current revenue, an item of Rs. 51,475, for the cost of providing water mains in certain streets of the city, being debited to loan account.

The Governor in Council has made the following appointments :—Mr. J. W. Walker to be a First Grade Judge and Sessions Judge, *vice* the Hon. H. J. Parsons. Mr. J. L. Johnston to be Judge and Sessions Judge of Dharwar, *vice* the Hon. H. J. Parsons. Mr. E. Hosking to be Judge and Sessions Judge of Tanna, *vice* Mr. Johnston. Mr. G. C. Whitworth to be a Second Grade Judge and Sessions Judge, *vice* Mr. Walker, and to be Judge and Sessions Judge of Khandesh, *vice* Mr. Hosking, but to continue to act as Judge and Sessions Judge of Ratnagherry till further orders.

An Ahmedabad correspondent telegraphed on Friday :—The members of the Nadiad Agricultural Association presented a congratulatory address to-day to the Hon'ble Rao Bahadur Becherdas Veharidas Desai. All the principal inhabitants of Nadiad attended, Mr. Chandulal taking the lead. Mr. Cooke, the Collector, presided. Great enthusiasm prevailed.

A correspondent telegraphed from Baroda on Saturday :—A large and influential meeting was held this afternoon in Bhaskarrao Vithal's Wada under the presidency of the Dewan Bahadur Laxmanrao Jagannath. After an able opening speech by Rao Bahadur Janardan Sakharam Gadgil, High Court Judge, an address was read and presented, together with a valuable diamond ring, shawl and several surgical instruments to Dr. Bhalchandra Khrishna Bhatwadekar, Principal of the late Vernacular College of Science, Baroda, by his pupils. The Doctor suitably acknowledged the gift, and some impressive speeches were made, recommending a combined study of Eastern and Western systems of medicine through the vernaculars.

The following is the summary of the Bombay season's report for the past week :—Rain in parts of Poona, Sholapur, Belgaum, Kanara, Hyderabad, and Upper Sind Frontier. Standing crops in Shikarpur benefited by the late rains. Standing crops fair in Tanna and in Kolaba, and good in other districts. Cotton-picking in progress in parts of Gujarat, Kattywar, and Southern Mahratta Country. Harvesting of late crops in progress in most districts of the presidency proper and Sind. Ploughing operations for next season's crops continue in Ratnagherry, Satara, Bijapur, Dharwar, Canara, Poona, and Kattywar. Probable outturn of late crops 15 annas in Hyderabad. Opium crop in Baroda attacked by a disease called *khakri*, and its probable outturn estimated at 8 annas.

H. E. the Governor presided at another meeting of the Bombay Legislative Council held on Monday at the Secretariat for the purpose of giving further consideration to the new Bombay Municipal Bill. During the sitting, which extended from noon to 7-45 p.m., several amendments to clauses of the Bill were disposed of, many of the same having reference to building regulations. The sections relating to the fire brigade were considerably changed, the levying of a rate for meeting the brigade charges being agreed to. It was resolved *inter alia* that the framing of bye-laws should be performed by the Corporation instead of the Commissioner. The Council will meet again on Saturday for the purpose of considering a communication from the Government of India with reference to the jurisdiction of the Small Cause Court, and a number of verbal amendments are to be submitted by the Hon. J. R. Naylor. The third reading of the Bill is arranged for Tuesday next.

On Friday afternoon Princess Margaret and Prince Arthur, the children of T. R. H. the Duke and Duchess of Connaught, left Bombay for Europe by the mail steamer, under the care of Sir Howard and Lady Elphinstone. A little before half-past 4 o'clock the Duke and Duchess of Connaught and their son and daughter arrived in a carriage and pair at the Apollo Bunder, where the members of the Commander-in-Chief's staff were present to see Princess Margaret and Prince Arthur off. On alighting from their carriage Nawab Khorshed Jah Bahadur, the Ameer-i-Kubeer of Hyderabad, who has been in Bombay for the last two months for the benefit of his health, was introduced to the Duke and Duchess. Amongst those present were Colonel Becher, Equerry-in-Waiting, Colonel Cavaye, Military Secretary to the Duke, Surg.-Major Keath, Captains Herbert and Metcalfe Aides-de-Camp. At about 4-35 p.m., their Royal Highnesses, accompanied by their children, Sir Howard and Lady Elphinstone, Colonel Becher, Dr. Keath and Captain Herbert, got into the Government steam launch, and proceeded to the mail steamer.

Amongst the passengers by Friday's mail steamer were :—Mr. J. G. Cordery, C.S., the Resident of Hyderabad, Colonel H. N. Reeves, Political Agent, Kolhapore, and Mr. Baggallay, lately Deputy Agent to the Southern Mahratta Railway. Nawab Khorshed Jah, Sir Dillar Jung and his brother Nawab Shumshoodeen were present at the bunder to wish Mr. Cordery good-bye and *bon voyage* to Europe.

On Monday afternoon their Royal Highnesses the Duke and Duchess of Connaught, accompanied by Colonel Becher, Equerry-in-Waiting, Colonel Cavaye, Military Secretary, Surgeon-Major Keith, and Captain Metcalfe, A.D.C., left the Victoria Terminus for Poona, *en route* to Mahableshwur, by the Raichore mail train. A number of officers of the garrison, and several Foreign Consuls were present at the station to witness the Duke and Duchess' departure. Amongst those present were Lady Reay, Captain Sir Henry Morland, Chairman of the Bombay Municipal Corporation, Brigadier-General Heathcote, commanding the Bombay District, Mr. H. Bartelles, the German Consul, Mr. J. F. Stockinger, the Austran Consul, Brigadier-General Pottinger, Secretary to Government, Military Department, Brigadier-General Adams, Quartermaster-General, Colonel the Hon. N. G. Lyttelton, Military Secretary to H. E. Lord Reay, Colonel Cunningham, Assistant Quartermaster-General, Colonel Portmann, Superintendent G. I. P. Railway Police, Colonel Wardrop, Judge Advocate-General, Captain Herbert, A.D.C. to the Duke, Captain Roupel, Deputy Assistant Adjutant-General, and Captain MacMahon, Deputy Assistant Quarter-master-General. At about 1 p.m., the Commander-in-Chief, accompanied by the Duchess, arrived at the station, where they were received by the gentlemen present. Miss Wardrop then presented her Royal Highness with a handsome bouquet, which was duly accepted. The Royal party travelled in a reserved saloon belonging to H. E. the Governor. A salute of fifteen guns was fired announcing the departure of the Commander-in-Chief. The Duke and Duchess and party leave Poona for Mahableshwur on the 22nd instant.

The Bombay correspondent of the *Pioneer* writes :—By the departure of Surgeon-General Moore, the Presidency loses one who has proved himself to be an able and successful administrator. All ranks of his own service and the European and native public unite in testimony to his great worth. His successor is Dr. Pinkerton, a man in every way qualified to fill the important office. Deputy Surgeon-General Hewlett, the Sanitary Commissioner, is his senior, and would have been appointed, but he was only legally qualified for the appointment by having been granted an extension of office some years ago, and it was felt that it would be a hardship to his juniors to give him another spell of office. No one will deny that Dr. Howlett has done long and good service for the State ; but in a matter like this the careers of other men must be considered. Dr. Hojel would have been appointed to the Deputy Surgeon-Generalship of Sind, but his services are needed here with regard to the erection of a new European hospital. A large number of people rejoice that Bombay did not lose him.

BIRTHS AND DEATHS IN BOMBAY.—The total number of deaths registered during the week ending Tuesday, 20th Mar., 1888, was 408, being 23 less than the preceding week and 7 less than the week ending the 15th March, 1887 ; 85 less than the corresponding period in the preceding five years. The deaths among the different classes were :—Buddhists, Jains, &c., 20 ; Brahmins, 19 ; Bhattias, 4 ; Hindoos of other castes, 196 ; Hindoo outcastes, 43 ; Mussulmans, 93 ; Parsees, 17 ; Jew, none ; Native Christians, 9 ; Europeans, 8 ; Negro-Arabs, 2 ; other unknown races, 1 ; while the rate of mortality per 1,000 of the population was 23·05. There were 84 deaths from remittent fever, being the same as last week and 6 more than the corresponding week of last year. There were 2 deaths from cholera last week. The mean number of deaths from cholera in the corresponding week in the preceding five years was 11. The deaths from diseases of the respiratory system, diarrhœa, and dysentery were 76, 18 and 14 last week, against 78, 16 and 13, respectively, in the corresponding week of last year. During the week 367 births were reported in the different districts.

AFGHAN NEWS.

The following is a translation of a letter which the *Civil and Military Gazette* has received *via* Peshawur, from an Afghan correspondent :—

"I do not know what the Russian Government will think when it hears how strong a friendship the English Government, under Lord Dufferin, has gained with the Afghans. The Chiefs of Swat, Bajaur, Dir, as well as Asmar, and those who attended the Durbar recently held at Peshawur, are filled with sorrow at Lord Dufferin's departure from India. When Mohamed Tamas Khan, ruler of Asmar, who is at present at Jellalabad, first heard of the news, he at once wrote for confirmation ; and when the fact was proved to him, received it with great regret. The departure of Lord Dufferin is regretted by all in Afghanistan. Even Khunjan Khan, ruler of Rayat, on the Punj Kora river, although he was not invited to the Durbar, has expressed his regret at the Viceroy's departure. All of us Afghans who were honoured with an interview with such a highly praised Viceroy of India, must be grateful to the Commissioner of Peshawur, who arranged it."

Other correspondents have already written of the new movement of Nur Mahomed towards Khost, and it appears also that the Hoti Khel tribe purpose making an attack upon Khost, having refused to recognize Afghan rule there.

Other troubles near the Kohat frontier are expected to arise from the action of Mozuffer Khan of Hangu in British territory, who has persuaded the tribes to collect heavy tolls on all merchandise passing across the frontier. Owing to the checking of trade *via* Peshawur by the Ameer's impositions, and *via* Bannu by the action of the Waziris, an impetus would have been given to the trade by Kohat. This, however, is now checked, and an angry feeling prevails which, unless something is done at once, will cause hostilities with Kohat frontier.

HIGHER EDUCATION IN GERMANY AND INDIA.

A COMPARISON.

On Tuesday evening Professor Forrest delivered an interesting lecture at the Sassoon Mechanics' Institute on the above subject. There was a large audience. The lecturer, who was introduced by Colonel Merewether, the chairman of the Institute, said :—

It has given me great satisfaction to accept your kind invitation to deliver a lecture in this hall. As a citizen of Bombay I take a deep interest in an institution meant to increase the material wealth of the great city as a worker in the field of education. I take sincere interest in the growth of an institution founded to illustrate and explain the various arts of life to those who are to exercise them as a profession. Gentlemen, it seems to me a legitimate object of a Mechanics' Institute to point out the connection between the mechanic arts and all branches of learning, and to show the necessity which exists for an union between them all. For this reason I have chosen as the subject of my lecture this afternoon, not technical education in Germany, which might seem more adapted to the place, but higher education in Germany and India. Gentlemen, the most important lesson that I learnt during my recent tour in Germany was the one that it was not by technical education alone, but by technical education grafted on a sound system of general education that Germany has made the progress in manufactures which now makes her so formidable a competitor to all nations. By her educational system she has not merely taught her sons the mechanical arts, but developed the intellect of the nation. Most persons know that Germany is superior to other nations in her educational institutions ; but they do not realise the important fact that the superiority of the Germans in educational matters is due, not solely to the efficiency of the institutions, but to the careful manner in which every branch of the educational system is adjusted to the whole and to the wants of the people. The German educational system was first carefully planned by able rulers and statesmen, and the noble fabric was then erected by wise and patient labour. From the Volksschule, where the child of the people learns to read, to the University, it is one harmonious structure. To discover the foundations of this structure we must go back to the Reformation. From the Reformation dates a new era in the educational history of Europe. The newly aroused intelligence of men discovered that the old system of teaching—the logical verbalism of scholastics—was useless for developing the powers of the mind. In Germany specially the reformers were the leading spirits in intellect and culture, and they directed their energies to the reform and improvement of education. These reformers caused a marked improvement in the schools of Germany, but in course of time Protestantism lost its reforming zeal and teaching, which was entirely in the hands of the clergy, lost its spirit and power. The schools began to fall into a sickly state, and the Government saw it was time to interfere. It was Frederick William I. who first brought Prussian schools into direct connexion with the State. Unreasonable and ferocious, he was not a monarch to win our love or admiration, but he had one great virtue, he understood the value of *discipline*. Discipline—Zucht—this single word explains the secret of Germany's triumph and success. The Germans are taught from childhood to understand that obedience is not servility and that submission to law and authority is the germ of freedom. Frederick William not only imbued every department of the State with the spirit of discipline, but also the Crown schools, by placing them under rigorous State management. His illustrious son, scholar and soldier, carried the reform farther, and brought all the schools into close relationship with the Government. The general principles regarding education and the schools laid down in the famous Code of Law, drawn up in the reign of Frederick the Great, has been the basis on which all subsequent legislation has proceeded. After the death of Frederick the Great came years of sorrow and disaster for Germany. The Battle of Jena marked the darkest hour of her existence ; but it was in the hour of sorrow and defeat that a few wise men turned to education as the instrument of their country's salvation. After his country had been overrun by Napoleon, Von Stein said :—"Most is to be expected from the education and instruction of the youth. If by a method based on the nature of the mind every power of the soul be unfolded and every crude principle of life be stirred up and nourished, if all one-sided culture be avoided, and if the impulses (hitherto often neglected with great indifference) on which the strength and worth of man rest be carefully attended to, then we may hope to see a race physically and morally powerful grow up, and a better future dawn upon us." We have seen that hope realised. We have seen the dawn grow into the fulness of a glorious day.

Gentlemen, just exception may be taken to the title of my lecture—Higher Education in India and Germany—for this afternoon I am only going to conduct you over the educational institutions of one small German State. To visit all the great educational institutions of the German Empire would require a great many afternoons. The State of Baden, which I ask you to visit in my company, has had many able men to administer its affairs, and has paid great attention to education, and the educational system founded there may be regarded as fairly typical of the educational system of the whole Empire. I ask you to come with me, not to a rich capital like Bombay, the seat of the Government of an important kingdom, but to a small German town called Freiburg, situated at one of the entrances of the Black Forest. It is a town rich in historical associations, and it has a Munster of which every patriotic German is proud ; for it is not only one of the finest specimens of Gothic architecture, but it is the only complete cathedral in that style to be found in Germany. However, I regret we have no leisure this afternoon to examine the beauties of the shrine. The first building we have to explore has no architectural pretensions, but it has spacious rooms and wide corridors, and, unlike buildings in India, it is eminently adapted for the purpose for which it was built—a large school. This is the Gymnasium, or great classical school. It has six classes, not numbered as in England and India from below, but from above ; a sixth form boy is not in Germany at the top, but at the bottom of the school. The cost of education in the lowest classes in the Gymnasium is forty-four shillings a year ; in the higher classes (IV. and V.) fifty-four shillings ; in the highest (I., II., III.) sixty-four shillings. The entrance fee is four shillings. School education is not only superior, but cheaper than secondary education in India. In Germany the price paid by the parent for higher education is about £3 per annum, and the actual cost about £7. The principle is thus conceded that the middle and upper classes have as much right to have their children's education provided and partly paid for by the State as the poorer classes, and the position is perfectly logical. In Germany the State is supposed to be even more especially interested in the higher education and the town in the lower, and for this reason, in a Real School for the upper classes the State pays two-thirds of the deficits, the town one-third ; for the lower school the State pays one-third and the town two-thirds. On entering the sixth or lowest class in a Gymnasium, a boy is instructed in German, Latin, Arithmetic, Geography and Natural History. From the day he enters the school to the day he leaves a youth is thoroughly instructed in his own mother tongue. Hundreds of young men yearly leave the great Public Schools of England without being able to write six lines of English correctly, and in our Indian High Schools the study of a boy's vernacular is also shamefully neglected. The course of Natural History is continued to the highest classes, where the pupils are taught Elementary Chemistry, Geology and Mineralogy. History is taught in all classes above the two lowest. The course commences with Ancient History, and ends with German History. The mathematical course in a German classical school is extensive. In the two highest classes the pupil has to learn Geometry, Stereometry, Algebra to Binomial Theorem and Conics. In an Indian High School four books of Euclid and Simple Equations is the extent of mathematical instruction. French receives considerable attention in the Gymnasium. A boy commences French Grammar and Exercises in the fourth form, and step by step is made a thorough master of the language and of its literature. Greek and Latin are, however, the two main subjects in the Gymnasium or classical school. Greek begins at the Gymnasium in the Lower Tertia with Grammar and Exercises and an easy reading book, and in the Upper Prima six hours a week is devoted to it, and the student reads nine books of the Iliad, Sophocles, Thucydides VII., Plato, Apology of Socrates, Demosthenes, the Three Philippian Speeches. Separate lessons are given in grammar and composition. In Latin in the Upper Prima selected books from Cicero, Horace, Tacitus are read, and composition lessons are given. Hebrew and English are voluntary subjects in the Gymnasium After having wandered over the building, and having spent a pleasant hour in hearing the boys describe the plants placed before them in the botanical lecture room, we proceed to the Real School, which is near at hand. In the Gymnasium literary pursuits occupy the leading place, but in the Real School, the scientific and professional element predominates. The Real School, however, is not a mere commercial and middle class academy. History, Literature, and Language occupy in its curriculum an important place, at the same time leaving room for Mathematics, Natural History, Physics and Chemistry. In both schools there is no fatal bifurcation which prematurely separates the two main instruments of intellectual culture—language and science,—but in the higher classes of the Gymnasium more attention is paid to Language ; in the Real School to Science. The reason is that the pupils of the Gymnasium, on leaving school, complete their education at an University ; the pupils, on leaving the latter, enter a Polytechnic College, or at once start on the active pursuits of life. The Real School, like the Gymnasium, is divided into six classes. In the lowest or sixth class the pupil is taught German, French, Arithmetic, Geography, the Physical and Mathematical Geography of Baden, Natural History, Writing, Drawing, Singing, Gymnastic. He is taught and thoroughly advanced in these subjects till he reaches the third class, when Geometry, and not antiquated Euclid, and English are added to the list. In class II. he commences the study of Algebra. In class I. he devotes four hours to the study of German ; five hours to French ; four hours to English (Macaulay's Lord Clive, Scott's Lady of the Lake, and Conversation) ; Algebra three hours ; Logarithms and Geometry, two hours (Trigonometrical functions and the complement and supplement of angles), Geometrical Drawing, two hours ; Physics, two hours : and Chemistry, two hours. This, gentlemen, is the curriculum of the Real School, and it is impossible to find a more thorough and perfect one for the professional man. A distinguished officer whom I met at Freiburg had four sons educated at the Real School, who all passed for Woolwich, and two got into the Royal Engineers. The day after I visited the Gymnasium I got a courteous invitation from the Rector to attend the Abiturienten, or Leaving Examination. This is the examination on which depends admission to the Universities, to special schools, and to the civil and military service of the State. In one of the spacious lecture rooms I found the examining body. It consisted of the director of the Gymnasium and the professors who teach in *prima* and the delegate of the Provincial School Board. The abiturien, or leaving boy, must have been two years in the *prima*. The examination is of the same standard as the regular work the boy has done during the past two years. There is no necessity to cram for it. The written examination had lasted a week, and only those who had passed in it were tried *vica voce*. The morning I went the students were being examined in Mathematics. The professor set a problem in geometrical series and the student solved it on the board. Then the representative of the School Board gave a problem in Geometry, which was followed by one in Mechanics The examination of the class lasted three hours. If the Commission are not unanimous about passing a candidate, they vote ; the youngest member voting first and the president last. The representative of the Provincial Board may, however, refuse to pass a candidate, though the majority have voted for him. This, gentlemen, is a rough sketch of the Abiturienten-examen, or leaving examination. I trust, gentlemen, the day is not far distant when a similar system will be introduced into this land. In Germany a man has to pass only two examinations, the leaving examination, which I have described, to prove that he has been trained to acquire knowledge, and the examination for the Doctor's Degree, after the University course, to prove that he has made himself a master of some branch of knowledge. In India both schoolmasters and professors are entirely occupied in preparing men for examinations. The best method of training a man to pass an examination is to furnish him with a formulary of criticism, and to teach him to reproduce it with the minimum of thought and maximum of rapidity. Gentlemen, when I read complaints regarding the Vernacular press, I wonder what other results statesmen and rulers expected when the mind of the young is filled, to use the words of Milton, with ragged notions and babblements instead of worthy and delightful knowledge. Germany does not suffer from youthful politicans ready to proclaim their crude ideas on every subject. Why? Because in Germany higher education teaches men not to criticise, but to weigh facts, and discipline of this nature slays vanity and precociousness.

Gentlemen, having shown you the Gymnasium and the Real School, I must ask you to leave Freiburg and come with me to the small town of Futwargen, situated in the Black Forest, one of the most beautiful regions in Europe. The chief branch of industry in the Black Forest has been for centuries clock and watchmaking. Futwargen is the centre of the trade, and for this reason the state of Baden has established there an art school and a technical school. The former is meant to train men to make the cases and ornamental decoration of watches and clocks, artistic and not vulgar and commonplace as they are in England. The Technical School is to teach the workmen of the Black Forest to make the works according to the latest scientific inventions, and watchmakers from all parts of the world visit it in order to have new inventions tested and to gain information regarding their craft. The Director of the Art School received us most cordially when he heard we had come from India, and showed us over the building. The student before entering the Art School has to satisfy the authorities that he has had a sound primary education. The first year in the school is devoted to elementary drawing and interpreting plans ; then the student is taught to model ; and, lastly, to carve in wood and to engrave. It was deeply interesting to see the students mould ng the clay into beautiful forms. A teacher was in the room to guide them, and before them lay models of all the finest works of art which the genius of Greece or R ome had produced. To produce these models must have cost a considerable sum of money ; but when the German Government start an institution, they do not proceed to destroy its usefulness by stating that they have no funds to support it in an efficient state. I remember reading in an official document that the teacher of engraving in our Art School was a clerk in the Abkari Department, and Govern ment was compelled to dispense with his services on account of want of funds. It is difficult to trace the binding link between the Abkari Department and art metal work ; but, perhaps, the Bombay Government considered that as Burns was a gauger and a poet, so the clerk in the Abkari Department might also be a gauger and an efficient instructor of the Fine Arts. In that case it was a pity to dispense with his services. After having spent a pleasant hour in the Art School, we crossed the street and visited the Technical Institution. Both are modest buildings, without architectural pretension, and cost about £2,000. Germany provides its educational department with good teachers before it lavishes money on the æsthetics of brick and mortar. At the Technical School we attended a lecture on mechanics specially adapted to the mechanism of a watch, and then strolled through the workshops and saw the students engaged in making the different parts of a watch. The tuition at the Technical School is divided into three yearly courses —the preliminary, intermediate, and final—and embraces theoretical as well as practical instruction. The theoretical tuition is divided into the following :—

(*a.*) *Preliminary.*

1. Arithmetic.
2. Geometry.
3. Stereometry.
4. Trigonometry.
5. Freehand Drawing.
6. Book-keeping and Correspondence.

(*b.*) *Intermediate.*

1. Mechanics of solid bodies.
2. Physics, more particularly as regards electro-technical apparatus.
3. Technology and knowledge of working tools with sketching practice.
4. The construction of watches.
5. Constructive practice in the making of watches and clocks.
6. Book-keeping and bill discounting.
7. Freehand Drawing, more particularly with regard to the exterior of watches.

(*c.*) *Final.*

1. Practice in calculation and designs of watches for particular purposes.
2. Construction of special machines for the purpose of watch-making.

The instruction in the workshops is as follows :—

(*a.*) *Preliminary.*

1. Manipulation of various materials by filing boring, turning in lathe, &c.
2. The finishing of certain working tools and moveable parts of the tool machines.
3. Finishing off certain parts of watches.

(*b.*) *Intermediate.*

1. Placing, putting together, taking to pieces, and adjusting watches.

(*c.*) *Final.*

1. Finishing watches for particular purposes, for registering apparatus, electric apparatus, and small tool machines.

The conditions for entrance are as follows :—For preliminary course, the candidate must be 14 years of age, and bring a "leaving certificate" from a Government or Board School. For intermediate course, the candidate must be 15 years of age, and he must have attended a Mechanics' Institution with success, or have worked for some time in the watchmaking trade or other industry, and be able to show that he is able to do all that is required of him in the preliminary. For the final course, the student must be 16 years of age, and give proofs of knowledge and accomplishments which have been attained in the intermediate course.

Gentlemen, having conducted you over the Watch-making School at Futwargen, I must ask you to accompany me over the School of Architecture at Karlsruhe, the capital of the Baden State. The programme informs us that the object of the School of

Architecture is to perfect by a system of teaching the following :—

I. Master mason, stone mason and carpenter ; Building-tradesman, joiner, glazier and locksmith ; Certified work-masters, foremen and draftsmen.

II. Engine-builders and other workers in metal.

III. Teachers of trades or professions.

Besides these, other craftsmen, such as tinsmiths, turners, slaters, gardeners, road surveyors, stokers, and engine-drivers have the opportunity of visiting the school for a single course. The following is the programme of studies :—In the first class is taught German, business essays and letters ; mathematics, including geometry and stereometry ; physics ; writing, elevation, geometrical and technical drawing ; construction of geometrical figures by practical lessons ; the principal curves ; practical examples in connection with projections ; freehand drawing. In the second class, mechanics, physics, chemistry is added to the above list of subjects, and in this class technical instruction first commences. Thirteen hours are devoted to building. The official programme describes the work to be done as follows : —Stone dressing or facing with natural and artificial materials ; solid and hollow walls ; columns and chimneys ; carved work for walls ; construction of arches ; slate and tile roofing. Four hours in the week are devoted to practical exercise for carpenters ; Four hours to architecture, elementary architectural structure, simple sockets, girths, parapets ; making of windows and doors. Consruction of simple dwelling houses. Four hours to ornamental architectural exercise in the finer and more advanced grades of architecture, wherein the purely decorative constructive forms of figures are modelled or improved. In the third class instruction in surveying is given, and two hours' instruction in architectural materials, genuine and artificial building stone, cement, wood for building purposes and its preservation, the principal metals used for building, purposes. In the fourth class book-keeping is added to the other subjects : simple book-keeping, order and management of business accounts. In the fourth class four hours are devoted to taking stock ; estimate according to given plans ; contracts and law regarding buildings. Three hours are devoted to ventilation and sanitation. Eleven hours to practical architecture, construction of staircase, metal roofing, and eleven hours to designs for buildings. (Position and arrangement of dwelling-houses, lodging and country houses, as well as simple school buildings, and hotels.) In the fifth or highest class the student is trained to design country and town buildings in their entirety. This, gentlemen, is a rough sketch of the architectural course in the Karlsruhe Technical School, and I think you will agree with me that it would be impossible to devise one in which theory and practice were better blended. I saw there the workman of the first year moulding bricks ; I saw the workman after three years' course making the design for a handsome public office of which he was capable of supervising every detail. The Director asked me if we had an Architectural School in Bombay. I said we had an Engineering College, and in India it was considered that teaching men to make roads and bridges was the best training for architects. A puzzled look came across his countenance. Then he grew profusely polite and exclaimed : "The English are a wonderful people." If he had seen the Council Hall at Poona and some other piles erected by amateur architects he would have been confirmed in that opinion. It seems to me that it is a duty incumbent on every local Government to found a school of architecture as a simple act of reparation for the injury we have done to that noble art in India. The Mahomedan conquerors, though insisting on the bold features of their own minarets and pointed arch were fain to borrow the pillared hall, the delicate traceries, and other surface ornaments of the conquered. They took advantage of tastes refined by centuries of civilization. If you examine the moulding and traceries of our modern buildings, you will see what we have done to degrade these tastes. Happily, we have not destroyed in the Hindoo mason all artistic feeling, as the Victoria Terminus testifies. The carved ornamentation in that building shows what can be done by men trained in a School of Art under a principal who is a thorough artist.

In the Baden Technical School there is a special department for the training of mechanics. The theoretical training is similar to that given in the architectural department, but the practical instruction is adapted to mechanics. In the third class instruction is given in casting and forging ; laws relating to boilers ; arrangement of boilers. In the fourth class six hours a week is devoted to practical instruction regarding steam-engines, water-wheels, and turbines. The prospectus states :—"Particular attention is paid to the subjects for the examination of engine-drivers and firemen." A third department of the Technical School is devoted—to use the German phraseology—for the advancement of teachers of industries.

Having spent some pleasant hours in the Technical School we drove to the Polytechnic. In Germany a Polytechnic is a scientific and technical university. It is to the real schools what universities are to the gymnasiums. The Polytechnic at Karlsruhe is one of the oldest institutions of its kind in Germany, and one of the most successful. The building is a spacious one, quadrangular in shape, and contains suites of lecture rooms, laboratories, museums and workshops. I can best describe it to you by giving you a translation of the prospectus of the Technical College of the Grand Duchy of Baden, Karlsruhe :—

Organisation.—The object of this College is to further and advance technical knowledge and art. The course of instruction given, therefore, endeavours to obtain these ends by taking fast hold of the principle that a proper preparation for any technical calling must rest on a thorough grounding in mathematics, physical science, knowledge of agriculture, history and art. The Technical College offers opportunities for ordinary and special instruction for the engineer, the mechanical engineer, the architect, chemist and the forester. The apothecary, the surveyor, the mathematician and the naturalist will also find in this college the means of perfecting themselves in their various callings. Candidates for the Mathematical Physical Science Tutorship of the Grand Duchy of Baden middle class schools are allowed (according to an act passed on the 8th November, 1883,) to work out a part of their studies in a German higher technical institution ; but they must keep at least four terms at a German University. With reference to the study of Pharmacy, the studies at the Technical College are equal to the studies at a University as regards qualifying for the examination. The various branches of tuition in the college are as follows :—No. 1, the Mathematical Physical Science School. No. 2, the Civil Engineering School. No. 3, the Machine Building School. No. 4 the Architectural School. No. 5, the Chemical School. No. 6, the Forestry School. The instruction is divided into lectures, repetitions, graphical and constructive exercises, work in laboratories and workshops and excursions, and is also supported by the following collection belonging to the College :—1st, the Physical Cabinet. 2nd, the Mineralogical and Geological collection. 3rd, the Zoological and Botanical collection. 4th, the collection of Civil Engineering Models. 5th, the collection of Machine Models. 6th, the collection of Architectural Models. 7th, the collection of Works of Art. 8th, the collection for Chemical and Mechanical Technology. 9th, the Pharmaceutical collection. 10th, the Botanical Garden collection. 11th, the collection of Geodetic instruments. 12th, the collection of models for Elevation and for Analytical Geometry. 13th, collection of Casts (plaster). 14th, the Forestry collection. 15th, the Library and Reading-room, and further by the laboratories, viz., 1st, the Chemical Laboratory ; 2, the Physical Laboratory ; 3rd, the Mineralogical Laboratory. 4, the Zoological Laboratory ; 5th, the Botanic-Agricultural-Chemical Laboratory ; 6th, the Chemico-Technical Laboratory, further by means of the Forestry and Botanical gardens : and finally, by means of the workshops :—In connection with the Technical College are the following State Experimental Establishments :—1st, one Botanic Physiological Experimental Establishment ; 2nd, one Chemical Technical Experimental Establishment ; 3rd, one Experimental Establishment for the testing of railway materials ; 4th, one Experimental Establishment for the testing of Foods. The constitution of the Technical College was confirmed, by order of his Highness the Grand Duke of Baden, under the Act of the 31st of January, 1865. This Act places the College under the direct orders of the Grand Ducal Ministers of Justice, of Worship, and of Education ; and the following competent authorities, *viz.*, 1st, The director, who is elected yearly by the choice of the professors and the Grand Duke. 2nd, the Minor Council, consisting of the director, his predecessor, and three professors, to be chosen yearly by the Ministers of Justice, Worship, and Education, from the members of the staff of professors. 3rd, the Great Council, which is formed from all the professors of the College.

Qualifications for Admission.—For successful study at the Technical College, a certain amount of ordinary knowledge is necessary, to enable the pupils to grasp or comprehend an academical scientific lecture and to be able to work in scientific language. According to the experience of the Technical College, a thorough course in a German Gymnasium or Classical School, Commercial School or German Commercial School of the first grade, is earnestly recommended, and the certificates of Matriculation from either or any of these Schools command immediate entry : and those who are not able to show these Matriculation certificates have to show that they possess an authenticated certificate for the requisite degree of general instruction. An Entrance Examination is not necessary for this purpose. For foreigners, not of the German tongue, the condition and standing of their schools will receive fair consideration. Candidates for State services are subject to certain conditions relative to the General school instruction, which are mentioned in the "plan of study" of the various departments. Besides the above-mentioned conditions, the candidate for admission has to hand in to the secretary, on his reporting himself, the following papers : 1st, certificate of birth showing that the candidate has attained the age of 17 years ; 2nd, a certificate of moral character from the last school ; 3rd, if the candidate is still subject to a parent's or guardian's authority, a certificate must be brought from them acknowledging their willingness to the entry of the candidate, and their liability for the payment of the school-fees ; 4th, if the candidate does not reside in Karlsruhe, a passport or pass paper is necessary. Besides the certificate of competency in general knowledge the candidate has to satisfy the mathematical and graphical demand in that particular branch of study for which he wishes to enter himself. It will be also noticed that students of a mature age, or foreigners whose preliminary knowledge is not sufficient to enter them into a fixed school, will find opportunities of completing their knowledge in the lectures on Elementary Mathematics, Natural Science, etc. "Hospitanten," or "student guests," (those who are allowed certain educational privileges without affiliating themselves to the schools) are also admitted. Those students, also, who have completed a course of study in a particular branch in a University or high class Technical School, and wish to further their knowledge by attending some of the lectures or taking part in the exercises are admitted.

Fees.—Every term is payable in advance. Winter term, 80 marks ; Summer term; 52 marks ; Entrance fee 10 marks. "Hospitanten," pay for every weekly lecture hour 4 marks, and for every weekly practice hour 2 marks per term. The terms for practice in the Physical Laboratory (six hours during the week) per term 15 marks. For students who work daily, 45 marks in winter, 30 marks in the summer, and for "Hospitanten" who work daily 60 marks in winter and 45 in summer. Fees for the Mineralogical Laboratory are 15 marks for each term. For the Botanical-Agricultural-Chemical Laboratory the fee is 12 marks per term. The fees for practice in the Chemical Laboratory for practitioners who belong to a branch school of the College are, for the winter term 50 marks, for the summer term 40, and 2 marks per term for the use of the library belonging to the Laboratory. For "Hospitanten" 60 marks for the winter term, and 50 for the summer term, with 2 marks in addition for use of library. Fees for working in the Chemical-Technical Laboratory are the same as for the Chemical Laboratory. Fees for practice in the Chemical-Technical Analysis are 5 marks per term. Lectures by private teachers 4 marks, and if illustrated by experiments 6 marks per term

Diplomas.—The Technical College gives diplomas after severe examinations of the following degrees :—"Satisfied the examiners" : "Good" and "Very Good." Technical Diplomas are given to architects, to Technical engineers, civil engineers and foresters. Physical Science Diplomas are given for Chemistry, Physics and for Descriptive Natural Science. The Technical Diploma examination is divided into two parts, the first embraces Mathematical and Physical Science, the second, the other branches. Anybody is allowed to undertake the first, or Mathematical and Physical Science examination, who has undergone at least two years academical study. Anybody is allowed to go through the second or branch examination who has passed through the first examination, and has passed through the ordinary studies in a Technical College of that particular branch. In the examination for the Diploma for Natural Science, anybody is allowed to go through who has passed through a three years' study of Natural Science in a German College.

In the programme of studies I find nearly 100 lectures and demonstrations given during the term ; many of them are of a higly special character. I should like to discuss some of those lectures, but time forbids. I must ask you to return with me to Freiburg and visit a German University which is the crown of the German educational system. To understand the great influence the German Universities have exercised over the mind and fortunes of the German nation, it is necessary to have a clear idea as to their aims and aspirations and the means they adopt to attain them. The primary aim of a German University is not to be an institution for professional teaching, but to be the focus of general knowledge. Germany has clung to the old belief greatly attacked in the present day, that the best instrument for developing the mind is universal education. Leibnitz, Descartes, Darwin are the products, not of practical but theoretical science. Gentlemen, we are often told that the practical man is far superior to the mere student, and that he is of greater value in this sublunary world. But, gentlemen, the world owes a debt of gratitude to students who spent laborious days in solving problems which seemed of no practical value. The Alexandrian geometers spent their lives in investigating the properties of the eclipse. Could anything be more unprofitable? How could it add to the wealth of the world? But to their labours we partly owe our great circle-sailing, and consequently the wide commerce of the day. Boyle was a student who spent his days in investigating the elasticity of air. Could any labour seem more unproductive? But to him we partly owe the steam-engine. Gentlemen, there is not a yard of cotton cloth, bleached or printed, without assistance from the latest results of chemical research. There is not a railway curve laid, not a turbine wheel constructed, without the aid of the highest mathematics. It is only on the sound foundation of scientific and general knowledge you can build up specific proficiency by means of technical education. There is no mystery, no specific grace about technical education. Technical education properly so called is that which imparts a thorough knowledge of the profession or industry according to its scientific principles in vital union with the general mass of intellectual acquisition.

It is impossible to imagine a more thorough and liberal course of studies than the curriculum of a German University. They have retained the mediæval division of human knowledge into four groups—Theology, Jurisprudence, Medicine and Philosophy. They have adopted the educational frame of the mediæval world, but they have strengthened it, and modelled it, and expanded it to suit the requirements of the nineteenth century. Gentlemen, Germany, the country where thought is freest, does not neglect the study of a man's religion. Each Theological seat has its own faculty. After Theology comes Jurisprudence according to the arrangement of the old mediæval world. Freiburg does not profess to be a legal University, but during the summer time lectures were delivered on the following subjects :—Philosophy of Law, Institutes of Justinean History of the Roman Law, History of German Law, Private Rights, German Penal Law, Rights of Government, Constitutional Administration of the Duchy of Baden, History of German Law. The Philosophical Faculty in the University is the most important, because it includes Arts and Sciences. The Metaphysical course is far wider than that of Oxford. History in a German University is abundantly and thoroughly taught. Above all things, the fact is recognised that a man should have a knowledge of the history of his own country. At Freiburg lectures are given on the history of Baden and on Land Tenures, for the benefit, not only of students, but of officials, who are bound to attend the course. In this respect we might follow the example of the Germans. Many a native student is unable to finish his University course owing to poverty, and has to take Government service. Government should afford him every facility to attend any course at college, which would be useful to him in his official career. The Germans do not think that history means learning a few dates and facts from printed documents, but they regard it as a science, and they know that the aim of every science is to explain phenomena and formulate laws. To do this, facts must be gathered from original sources, and, therefore, the student, is practised in interpretation of ancient manuscripts. The Germans also pay considerable attention to a science closely connected with history, the Science of Geography. Lectures are delivered on the History of the Science of Geography, Physical Geography, Knowledge of Africa. Africa is chosen to create an intelligent interest among Germans in their new colonies. Gentlemen, I wish a knowledge of India was taught in every school board in England. I examined the lowest class in the Gymnasium in the Geography of India, and found them better acquainted with it than the majority of winter tourists. In fact, gentlemen, I have made it a hard and fast rule never to discuss the Land Tenure of India or the Salt Tax with any traveller who does not know where Delhi is, and this has saved me many a weary and unprofitable discussion. The Science of Economics is not neglected in a German University. The student is first instructed as to Political Economy with regard to the individual, from which he advances to Political Economy with regard to the State. His knowledge is tested and advanced by debates on economic subjects. Lectures are also given on the Economics of Finance and papers set on this important branch of the science. There are also exercises in Political Economy for lawyers and executive officers. In Germany, Natural Science is not regarded as something distinct from philosophy, but has an honourable place allotted to it in that faculty. Germany has also recognised that the Natural Sciences are based on mathematics, and, therefore, she does her utmost to lay the foundation deep and solid. In the experimental sciences of Physics and Chemistry, not only are lectures given on the different subjects, and experiments presented to the pupils by the teacher, but the pupils are taught to manipulate with their own hands. Practical exercise or scientific investigation in the Laboratory plays an important part in the

programme of a German University. Gentlemen, as you all know, in no country in the world is the science of Philology so keenly and thoroughly studied as in Germany. In Germany it is not the case, as in England, that a man is considered a classical scholar if he can write Greek and Latin prose with a certain amount of accuracy. More than that is expected. The student is trained to interpret old Latin and Italian inscriptions : he is practised in Classical Archæology. If a student takes up French among his Philological subjects, he is expected not only to have a thorough knowledge of French, but he must also be acquainted with the old French writers and the dialects of the different provinces. No German would be regarded as an English scholar who had not some acquaintance with old English, and lectures are given at Freiburg on Celtic Philology. But in their pursuit of foreign languages the Germans do not neglect the study of their own native tongue. There are lectures on the immortal works of Schiller and Goethe, and the study of old German is cultivated with patriotic ardour. The neglect of the study of the vernaculars is a grave blot on our present Educational curriculum.

The sketch of the course of studies pursued at Freiburg I have given you must not be regarded as representing the course pursued in the greater Universities like Berlin and Strasbourg. I must, therefore, ask you, gentlemen, to accompany me to Strasbourg. At Strasbourg the Germans are attempting the same task the English are attempting in India. They wish to unite to the Empire a conquered people by the common bond of learning. Instructive is the comparison between the methods adopted by the two nations. The Germans have spared neither time, trouble, nor money to make higher education thorough, but the Indian Government has refused to understand its needs and to carry it out thoroughly. It has founded schools and colleges, but it has shrunk from the trouble and cost requisite to make them efficient. Gentlemen, when I read that Government has not sufficient funds requisite to place our educational system on a sound basis, I think of the wise words once uttered by the eminent statesman and educationist who rules over the Presidency. Lord Reay, in the eloquent Rectorial address delivered at St. Andrews, said :—"Finality in University reform may suit the treasury, but you cannot make a bargain with knowledge, which is an expanding quantity." This fact Germany recognizes. On the University buildings at Starsbourg she has spent six hundred thousand pounds. The central pile built in the Italian renaissance style is justly ranked as one of the noblest creations of modern architecture. Over the centre a fine statue of Pallas Athene, holding in her right arm a torch and in her left a wreath, attracts the eye. Beneath the group an inscription informs us that *Litteris et Patriæ* to Science and to the Fatherland the building is dedicated. Above the windows are the busts of the ideal representatives of the five faculties—Paul, Solon, Aristotle, Hippocrates and Archimedes. In a niche on the left there is a statue of Argentina, the personification of the old free German city of Starsbourg, and in a niche on the right a statue of Germania. The dates 1567 and 1872 above these figures commemorate the foundation of the old High School and the revival of the University. Two centuries ago Starsbourg University was founded, but it was suppressed by the National Convention, because it was the stronghold of German sentiment and nationality. A French Academy took its place, which in its turn was closed in 1870, and on the 1st May, 1872, the Kaiser Wilhelm's University was opened. During the past fifteen years every nerve has been strained to make it the best and most complete University in the German Empire. To Strasbourg the leading men in Europe in every branch of literature and science have been tempted by liberal emoluments. No other University has such a distinguished rôle of Professors. The lecture rooms of the Arts School form a square, the centre of which is paved with marble and covered with a handsome stained glass roof. In the winter months five hundred students can enjoy warmth and exercise in his handsome court. From the Art Schools we proceeded to the Chemical Institute, a handsome building capable of holding two or three hundred students. Here we found them busy, making experiments each at his own marble stand. All glasses, instruments, and chemicals are supplied by the State free of cost. One of the most learned chemists in Europe was testing an experiment just completed by a student. The Chemical Institute has a scientific library of its own. From the Chemical Institute we proceeded to the Physical Institute, an equally handsome building, where we found a large number of students being instructed in physics and electricity. The building like the chemical laboratory was filled with every modern appliance for the study of physical science. From there we proceeded to the Botanical Institute, where the student can learn botany from dried specimens, and to the Botanical Gardens where he can study the living plants. Thence to the Astronomical Observatory which contains the largest refractor in Germany. The Geological and Mineralogical Institute is in course of erection. On our way back we paid a visit to the Archæological Collection, which contains some fine casts of ancient sculptures, and to the reading room, where every leading periodical and scientific journal published in Europe is procured for the students.

Gentlemen, I have now conducted you over the educational institutions which it was my good fortune to visit during my recent tour in Germany. Gymnasium, Real School, Technical School, Polytechnic, University, we have found them all as efficient as money and labour, and the wisdom of experts and statesmen, could make them. It is by means of this comprehensive and thorough system of education that Germany has built up that stately fabric, the German Empire. The German Universities—centres of art, science and letters—have moulded German nature into the Imperial type. Napoleon crushed Germany because there was no German patriotism, but Prussian patriotism, Saxon patriotism, and Bavarian patriotism. The men who were then the leaders of Germany saw that if the Fatherland were ever to recover it must become united and the parochial spirit must be destroyed. The goal was clearly defined and the means to attain it clearly planned. Slowly it was reached. It took half a century for the natural spirit to grow and spread from the centres of learning, and for the new citizens to found United Germany. But the goal was reached, and Germany became a great and consolidated Empire. In India a still nobler goal is placed in view. She has to take her place in that wide Imperial system which extends to every quarter of the globe, and is destined, as far as human judgement can foresee, to insure the predominance of English influence, of English institutions, and of the English language throughout the future history of mankind. The preparation for such a part involves a high and strenuous discipline, and the duty of the highest education is to regulate the noble aspirations which are common to our humanity and to supply the discipline which alone can safely wield them. If we wish to convert the carping parochial spirit of the hour into Imperial patriotism, we must follow the example set us by Germany, and make our Colleges and Universities real, that is productive as well as receptive centres of learning.

On the conclusion of the lecture, the Hon. Forbes Adam rose, at the request of the chairman, to return a vote of thanks to Professor Forrest for his eloquent address. He said that he was sure he was only expressing the feelings of everyone present when he described that address as most interesting and instructive. Long as it was, he for one was sorry, when Professor Forrest sat down, to know that it was finished. He looked forward to the morrow when he could study it more carefully and at his leisure, when he could take in and assimilate all the important and valuable facts which it treated. One thing which must have struck them was the thoroughness with which knowledge was imparted in Germany, and the earnestness with which it was sought after. These were things which they would do well to take to heart in India. As Professor Forrest had said in his eloquent peroration, Germany had attained that success and great triumph in the unification of Imperial control. So India, following the same methods and the same ways would also be a wonder and admiration in years to come. (Cheers.)

BENGAL.

The members of the three Scotch Masonic Lodges in Calcutta on Monday evening (12th inst.) consecrated a new Masonic Hall in Bentinck Street. The ceremony was performed by a distinguished visitor, the Right Worshipful Brother Sir Leslie DeVine, District Grand Master of Peru.

Major Boughey, R. E., on return from furlough, resumes charge this week of the Managership of the Eastern Bengal Railway. Major Sargeaunt, who has been officiating, comes to Bombay to officiate as Consulting Engineer for Railways in the place of Major Firebrace, who takes furlough shortly.

On the afternoon of the 14th inst., in the course of a nor-wester, there was a smart fall of hail in Calcutta, says the *Indian Daily News*. Pieces of ice, in some cases almost as large as a pigeon's egg, came rattling down in a lively shower. Horses exposed in the streets and umbrellas had an unpleasant five minutes. Rain continued to fall for some time, and the atmosphere was very perceptibly cooled.

Referring to the statement made by the English Press that Lord Dufferin leaves India in June the *Englishman* says :—"It is impossible as yet to say when Lord Dufferin leaves India, for the simple reason that no date has been approximately fixed. But so far is this official note from being authoritative, that the departure more likely will be postponed than accelerated. Lord Dufferin leaves Calcutta on the 29th instant for Rewah, Sikkim.

A rather serious explosion occurred on Monday (12th inst.) at the Government Gunpowder Factory at Ishapore near Calcutta. The explosion took place about 7 a.m., when starting one of the incorporating mills, in one of the mill rooms. It set fire to the roof of the building, but fortunately no lives were lost, and little or no damage has been done to the machinery. The cause of the explosion is not known, but a board of experienced officers has been appointed to investigate and report upon the matter.

CALCUTTA VOLUNTEERS—REVIEW BY THE VICEROY.

The annual inspection of the Presidency Volunteers by his Excellency the Viceroy took place on the Calcutta cricket-ground on Saturday evening. All branches of the corps were well represented. The Calcutta Mounted Rifles, the Calcutta Naval Artillery, and the Cossipore Artillery were drawn up on the right, while the regular companies, including the Eastern Bengal Railway Volunteers and the Cadets, who mustered strong, occupied the left of the ground.

Lord Dufferin, accompanied by his Staff, having inspected the line, the troops were formed up in three sides of a square, when his Excellency addressed them as follows :—

"Colonel Chatterton, Officers, Non-Commissioned officers, and men of the Presidency Volunteers,—It is a sincere regret to me to think that this is probably the last time that I shall have the pleasure of inspecting you, and of paying you those well-merited compliments on the appearance of all branches of the corps which have become better and better deserved each year since I arrived in the country. There are many indications which tend to show that, the patriotic spirit which originally induced you to enroll yourselves as Volunteers instead of losing anything of its vigour and vitality, is, on the contrary, encouraging you to fresh exertions and to a more earnest and thorough discharge of your duties ; for not only during the last year has there taken place a considerable accession to your numerical strength, thus showing the increasing popularity of the regiment, but, what is especially gratifying, the number of efficient marksmen has risen from 579 to 711 since 1887. The remarkable skill of the corps in shooting—and by what higher quality could any body of soldiers be distinguished?—has been most brilliantly and satisfactorily exemplified by the splendid victory they won over the crack team which was composed of his Excellency the Commander-in-Chief and his staff. Not only so, but you carried off the Bengal Presidency Association Cup from the whole of the Bengal Army ; besides obtaining several minor successes. All this is very satisfactory, and you have every reason to be proud of the high encomiums which have been passed upon you by General Purvis, and all the other military authorities under whose unsparing and scrutinizing eyes you have been put through your facings. There is no doubt, as I have had occasion before now to remark, that the Volunteer who in this country abjures his ease and devotes the time which he would be entitled to give to recreation to the irksome duties of drill, who voluntarily submits himself to the strict requirements of military discipline, and who identifies himself heart and soul with the interests of the regiment in which he has voluntarily enrolled himself, deserves well of his Queen and country, and—what I dare say you will consider even a greater compliment—of his country-women. Wishing you every success and a still larger increase to your ranks, I conclude these short observations by again emphatically pronouncing, on my own behalf, and I may add on behalf of all those who are present, my complete satisfaction with the magnificent appearance presented this day by the Presidency Volunteers."

Colonel Chatterton, Commandant, Presidency Volunteers, replied :—

"May it please your Excellency,—On behalf of the battalion, I desire to express our deep appreciation of the honour which your Excellency has conferred on us to-day, and of the additional proof which your Excellency has given us of the unceasing interest which you feel in all that concerns the welfare of the corps. Our gratification would be complete were it not tempered by the knowledge that this is the last occasion when we can have this parade for your Excellency's inspection ; but the recollection of the many kindnesses received from your Excellency and from the gracious Lady who is to-day to still further honour and delight us, is deeply impressed upon our hearts, and when your Excellencies finally leave India, when every loyal heart in the Empire is full of regret, in none will be found truer and warmer hopes for the continued welfare and happiness of your Excellencies than to-day exists, and will ever remain in the hearts of your grateful servants, the Calcutta Volunteers."

The prizes were then distributed by Lady Dufferin, a notable feature being the receipt, by Lieutenant Campbell, a most popular officer, of the Lieutenant-Governor's purse of Rs. 250 and medal, and the Viceroy's prize of Rs. 500 and medal, in addition to sundry minor prizes. Captain Whitehead, who failed to win by a single shot the Viceroy's prize, was in some measure consoled by receiving the Nawab of Dacca's cup, valued at Rs. 400, and other prizes. At the conclusion, Colonel Chatterton addressed her ladyship and solicited one more favour at her hands—her acceptance of a bracelet, the collective gift of every man on the rolls in all branches including the cadets. Lady Dufferin, who was evidently much touched, in a few graceful words tendered her acknowledgment and received the bracelet, which was jewelled with sapphires, pearls and brilliants, and bore a suitable inscription, from the hands of a golden-haired child, the daughter of the Commandant, who played her part in the ceremony with grace and self-possession. After a royal salute, three ringing cheers were given for Lady Dufferin, followed by a burst of cheering, in which the whole assemblage joined, for the Viceroy. Their Excellencies having left the ground, Colonel Chatterton, who shortly proceeds on leave to England for the dull season, addressed the regiment, who received his remarks with a final round of cheering, and then dispersed.

MADRAS.

The Madras Government has decided that the new High Court shall be built on the Light House, Esplanade, the position which Government hitherto declined to be allowed to be built over, in consequence of its proximity to the Fort. The materials for the building will be collected immediately.

A native, named Vencatasawmy Naidu, died at Bangalore on Friday, aged 107 years. The deceased claimed to have been 18 years old when the seige of Bangalore took place. He resided here then, and used to relate many incidents of that period. He was an old servant of Colonel Clarke, Secretary to Sir Mark Cubbon, and father of the present Commissioner of Coorg.

A monster meeting was held at Mercara on Saturday, protesting against the transfer of Coorg to the Madras Government. A Resolution was unanimously passed to memorialise the Government of India and the Secretary of State against any change. The meeting was most enthusiastic.

Colonel Montague Protheroe, C.B., C.S.I., Madras Staff Corps, Deputy Adjutant-General, has been appointed Quartermaster-General of the Madras Army, in succession to Brigadier-General E. Faunce, appointed to the command of a brigade in Burmah. Colonel Protheroe served in the Abyssinian War in 1867-68 (medal). He served in the Afghan War of 1878-80 as Aide-de-Camp to Lieutenant-General Sir Donald Stewart, Commanding Kandahar Field Force, and took part in the operations in the Kama District and at Besud ; he accompanied Sir Frederick Roberts in the march to Kandahar, and was present at the battle of Kandahar (mentioned in despatches, C.S.I., medal with clasp, and bronze decoration). He served with the Burmese expedition in 1885-86 as Deputy Assistant Adjutant and Quartermaster-General (mentioned in despatches, promoted Colonel, C.B., and medal with clasp). He is the only Madras officer on the active list who is member of the two Orders of the Bath and the Star of India. Two retired Madras officers belong to the two Orders, namely, Major-General Sir Frederick Goldsmid, K.C.B., C.S.I., and Inspector-General Sir William Mackenzie, K.C.B., C.S.I.

HOLLOWAY'S OINTMENT AND PILLS.—Old Sores, Wounds, and Ulcers.—The readiness with which Holloway's unguent removes all obstructions in the circulation of the vessels and lymphatics explains their irresistible influence in healing old sores, bad wounds, and indolent ulcers. To insure the desired effect the skin surrounding the diseased part should be fomented, dried, and immediately well rubbed with the Ointment. This will give purity to the foul blood, and strength to the weakened nerves, the only conditions necessary for the cure of all those ulcerations which render life almost intolerable. No sooner is this Ointment's protective powers exerted than the destructive process ceases, and the constructive business begins—new, healthy growth appears to fill up the lately painful excavated pit.

THE TIMES OF INDIA.

WEEKLY EDITION.

A FAMILY newspaper for Indian Readers, published every Saturday morning, so as to be received up-country on Saturday night or Sunday morning. Containing all the Indian and English news of the week, including

FIVE LONDON LETTERS,

and special

LETTERS AND TELEGRAMS

from Simla, Calcutta, Madras, Lahore, Allahabad, and all parts of India. Several original and instructive features are introduced.

FICTION

is represented by a Serial Novel, entitled

THE GOLDEN HOPE :

A ROMANCE OF THE DEEP.

"I dreamt a dream that was not all a dream."

BY

W. CLARK RUSSELL,

Author of "A Sea Queen," "The Wreck of the Grosvenor," "A Sailor's Sweetheart," &c.

Commenced on 3rd March 1888.

PORTRAITS

Carefully-executed by Maclure and Macdonald of London, of Anglo-Indian and Indian celebrities, with biographical sketches, are given gratis from time to time. Special attention is paid to

SPORTING NEWS

in India and at Home.

THE LADIES' COLUMN

contains all the fashionable and social intelligence of the week. There is also

A SERIES OF MAPS

to illustrate news of the week, while by way of

LIGHT READING

the best extracts from the English Periodicals are selected as well as original sketches.

All appointments and the more important notifications contained in the different

GOVERNMENT GAZETTES

are given in full; also military appointments and changes notified in

GENERAL ORDERS,

₹12 per annum, Post free to any part of India.

A Specimen Copy sent on receipt of name and address.

NOTICE.

Passengers arriving in Bombay may see the files of the Bombay Papers, containing the Telegrams from Europe, by calling at the Times of India Office.

FRIDAY, MARCH 23, 1888.

INDIA AND THE EUROPEAN SITUATION.

Time was, when all the nations of Europe might have been flying at each other's throats, without causing any very grave anxiety in India. But since our north-west frontier has become all but conterminous with the biggest, the most restless, and by far the most aggressive of all the European Powers, this state of things no longer exists. When next it pleases the Czar of all the Russias to re-open the interminable Eastern Question, it will be impossible, to use a discredited Parliamentary phrase of 1877, for India "to look on with indifference." Three weeks ago the Great Powers of Europe were in a very uncomfortable position towards each other, and the telegraphic news since wired has brought us nothing really quieting regarding the political outlook. The great Emperor has died since then. His son, in spite of telegraphic reassurances, is unable to appear in public. The Russian army has gone into mourning. The Russian press is talking glibly about the consolidation of a universal peace. But everything in reality remains just as it was, and in the last mail papers to hand Russia was still preferring her preposterous claims, under cover of a masked armament of little short of a million soldiers fully equipped for war. Now, it strikes us as somewhat curious that, no matter what the English Government may have done, the English Press do not seem to have carefully studied the Berlin treaty, which since 1877 has been the international law code with regard to Bulgaria and the Balkan Provinces. To all who are acquainted with the provisions of the said treaty, that the position of Prince Ferdinand, as Ruler of Bulgaria, is illegal, goes without saying, for the pure and simple reason that, as provided therein, his appointment "has not been confirmed by the Sublime Porte with the consent of the Powers." For the rest, despite the opinions of the German Chancellor, we fail to find within the four corners of this treaty one shade of the shadow of a basis on which to rest a superior claim, on the part of Russia, over the other signatory Powers to compel the Sultan to declare this appointment illegal, much less to put the clock back for ten years, re-introduce anarchy or chaos, with the view of creating a ground for the reconstitution of a Provisory Government, with an Imperial Russian commander at its head. And for what? Simply to oblige Bismarck; or, in other words, to enable Russia to re-enter on the position in regard to Bulgaria, which she then occupied with the full consent of all the signatory Powers. On the contrary, that state of things being intended simply to bridge over the period of disorganisation resulting from war, and the putting of the Bulgar in place of the Turk, it was expressly provided (Act 7) as follows:—"The Provisory Government cannot be prolonged for more than nine months from the date of the signature of this treaty," and "as soon as the Prince is installed, the new organization will be put in force in the Principality, and he will enter into full possession of his autonomy." Prince Alexander of Battenburg, the legally constituted ruler of Bulgaria, was forcibly abducted by Russia against the will of the people, which, in an ordinary case, would place her out of court; but the new organization, for the constitution of which the Provisory Government was created, has not disappeared. If, therefore, international law is allowed to have any weight, it is as impossible to justify the claims of Russia, as it is to view Prince Bismarck's suggestion to her to advance pretensions to which she, as one of the Signatories to the Berlin Treaty, must know she has no legal claim, otherwise than mischievous in the highest degree, and far more likely to precipitate war than to promote peace. Austria, Turkey, Italy, and England are none of them in accord on this point with the German Chancellor. This was made abundantly clear by the refusal of these Powers some three weeks ago to join in the identical note presented by Russia, Germany, and France to the Porte, calling on the Sultan to declare the sovereignty of Prince Ferdinand illegal without a disclosure as to what was to follow. Bulgaria, moreover, must be reckoned with, and her Government vow she is prepared to fight sooner than tamely submit to a Russian Protectorate or domination.

The question then was, and still remains, Will Russia, having followed the counsel and advice of Prince Bismarck, as far as the limits of diplomatic or peaceful measures will carry her after the war preparations on which she has been engaged at great cost for the past six months are completed, and after the severity of the European winter and spring have passed, do nothing more? It has not been her habit to act in this wise, and, therefore, we are not of opinion that she will do so now, while, as for her peaceful professions, they are, no doubt, equal in value to all similar professions previously made by the Czar's Government in like cases. We take it for granted, that if Russia interferes forcibly in Bulgarian affairs, or, as more congenial to her ordinary mode of procedure, encourages or promotes filibusting raids led by Russian officers into that country, the Bulgars will certainly resist. Serious disturbances in Bulgaria will follow, and in consequence of the geographical position of Bosnia, cannot be long carried on without compelling Austria to interfere, if only as a matter of self-protection. In this manner Russia would be furnished with a *casus belli*, and Prince Bismarck would thus have attained the object at which he would seem to have been aiming. Should Austria with such local allies as she can obtain, and possibly Italy, prove a match for Russia, the wily Chancellor will have disposed of a somewhat dreaded ally of France, without risking the bones of the historical Pomeranian Grenadier. We say "possibly Italy," solely because the secret treaty between Italy and Austria has up to date not been disclosed; but we have reason to believe that it clearly provides for the contingency we have indicated. But should Austria, even with or without her local allies, be worsted by Russia, Germany would be bound by her treaty obligations to come to her aid. In such circumstances it is more than probable that France would throw in her lot with Russia, and should she, with this view, march an army into Italy and sweep the Mediterranean, England could not possibly any longer consent "to look on with indifference." True, England has no treaty with any foreign Power, that under any circumstances whatever she should be bound to interfere actively in a European war. At the same time we may very safely assert that there has been a very clear and distinct understanding that, in view of certain eventualities, Italy shall not be left to protect the littoral of the Mediterranean alone.

We cannot certainly assert that events will take the turn we have above indicated; or even that there is a strong probability of it. Still the conclusions at which we have arrived are, for the most part, unquestionably what are commonly called "on the cards," and, therefore, it may not be either premature or unprofitable to examine how India would be affected by a combination of circumstances such as we have here sketched. In the first place, we may assume that, in the event of war breaking out, Russia will strain every nerve to compass the neutrality of England. Though not universally recognized in Europe, Russia knows well enough that England, of all the European Powers, is the only one that can do her any serious damage. As long, therefore, as England preserves her neutrality, Russia will manœuvre so as to give her the least possible cause to join in the fray. But if, on the contrary, England should join Italy in opposing France in the Mediterranean, Russia will certainly try to embarrass her in Asia, not with a view to making a descent upon India—that, at present, is certainly *not* "on the cards"—but with the view of embroiling her with the Ameer of Cabul and her Afghan allies, which in the future will be, with her, a trump card. It will be necessary, therefore, for our Government to keep this ever before them, so as not to play into the hands of Russia as previous Governments of India have, on more than one occasion, been simple enough to do. It will be advanced, we are aware, by some that a time when Russia's hands are full in Europe would not be a favourable moment for her to embroil herself also in Asia; and for this reason, as above stated, she will not do so, if she can avoid it; but as a *pis aller* she can and will do it. Russia's Caucasian and Trans-Caspian armies are quite distinct from her European military establishments. A diversion in Central Asia in favour of her military policy in Europe would cause her, of course, some, but not very great, inconvenience; and in the event of a war in Europe, should Russia be unable to purchase the neutrality of England, she will most assuredly make a favourable move in Central Asia wholly regardless of recent delimitations of boundaries. What that move, or at least her first move, will be, it does not require any great amount of political perspicacity to predict. She will at once march on Herat. As if to indicate her intention in this direction, she is already completing a branch line from Tejend, a station on her main line of railway, *viz.*, from Mikailovsk to Samarkand line to Sarakhs, which is only two hundred miles over a level country to Herat. Now, although a good deal has been done under the superintendence and instruction of the English to place the fortifications of Herat in a better position than they previously were, we do not fancy that the fortress, with an Afghan garrison only could long sustain a regular siege seriously undertaken by a Russian army having a formidable siege train of heavy ordnance. Whether we should aid the Ameer with men or money, or arms or officers, or any or all of them, in defending Herat against Russia is a detail which would have to be settled with the Ameer, and settled, we fear, in accordance with his wishes. But assuming Russia to be marching on Herat, and that our Government, after having taken counsel with the Ameer, has decided that time did not permit of their taking part in the defence of the fortress, what then? Should we keep on "never minding," or come to the aid of our allies in some other way? The first would be practically impossible, for if our Government followed that course, not only away would go the alliance, but the Ameer in all probability would make terms with the enemy. Our subjects and the native Princes of India, too, would have something to say on the subject. To retain the Afghan alliance is to us of singular importance in the present, and may be essential to the very existence of our Eastern Empire in the future. We cannot, therefore, if called upon, refuse to render the Ameer substantial aid in repelling a Russian invasion of his territories, and the only question for consideration is, in the face of the circumstances we have detailed, How, in what direction, and to what extent shall such aid as we are prepared to give be rendered so as to secure the desired end, most advantageously for ourselves and our ally? Looking to the present state of Europe, we may find ourselves face to face with the decision of this momentous question almost any day. How are we prepared to answer it? The question and answer are too big, we fear, with the fate of nations to be entered upon at the fag end of an article, so we shall postpone its consideration to another opportunity. Meantime we may "watch and wait": a position of expectancy from which we may hope that we will not be roughly aroused by some more than ordinarily aggressive act on the part of that restless Power, which by its sole action has rendered Europe a standing camp.

NATIVE OFFICERS: A SUGGESTION.

All the foreign military critics at the great Delhi Review were agreed in one point—the native regiments of the Indian army were, they said, dangerously under-officered. A scheme is now well in hand for slightly increasing the European element, but in these times of financial pressure, the military authorities must mainly depend on native material, and in this way the appointment of efficient native officers to the Indian Army has become a matter of the highest importance and is engaging the attention of H. R. H. the Commander-in-Chief of the Bombay Army, who is, we believe, a strong advocate for the establishment of a Staff College or Military School for their training. Government are also very desirous that the sons of native chiefs and men of the higher and educated ranks of Indian society should be appointed to direct commissions in regiments. With a few but very notable exceptions, this privilege has not been availed of. Concurring in these views, and in the hope of finding a solution of the question, we place before the military authorities for their consideration a few practical suggestions, which, without going to the expense of founding and equipping an Indian Sandhurst, would, until something better were done, allow the scheme to be thoroughly tested. The experiment, too, could best be made within the Duke of Connaught's command, and that in itself would be no small advantage. At Rajkote, then, we have an institution admirably fitted for the purpose, in the shape of the Rajkoomar College, where the sons of native chiefs are brought up and educated. The students are taught, not only what is good for their minds, but to develop their physical condition and make them robust and manly; they are encouraged to join in English sports, such as cricket, football, &c. They are also initiated into the mysteries of the "goose step" and other formations which constitute "drill," wear a uniform, and a certain amount of military discipline is instilled into them. We found on a recent visit to the college that many of the students were fired with the ardour for military service, and would doubtless follow a military career if they were allowed to do so. The question is, how this can best be done and how to foster and stimulate their military aspirations and make soldiers of them? If the matter is left until they quit the college, a return to their homes, where the influence of the zenana is supreme, very soon cools their ardour and destroys all their hopes.

We would suggest, then, that a Local Corps should be formed at Rajkote after the pattern of the Erinpoora Irregular Force, consisting of a regiment of infantry, say, of six companies, and a squadron of cavalry, just about the strength of the force at Rajkote at present. This corps would be under the military authorities for discipline and for the appointment of British officers, but altogether under the political authorities as regards its use. The students are, as we have said, drilled at the college and have a certain amount of military training imparted to them. This, in the case of those who are desirous of following a military career, should be continued by their being attached to the local force in which they could be taught thoroughly the drill and duties of both the cavalry and infantry branches of the profession, continuing at the same time their studies at the college. On attaining the age of sixteen or seventeen their ideas as to their future calling would be formed and be less liable to be biassed by home influences. In many cases this would lead to applications for commissions in the army, when they might be allowed, first of all, to serve for two or three years in the Local Corps, and then be transferred, as vacancies occurred, into the regular cavalry and infantry regiments. The example set by the Nizam of offering his sword and the resources of his State to the defence of the Empire, is being followed by many rulers of Native States. This is a suitable and efficient manner in which the Chiefs of the Kattywar States could very materially aid in the defence of the country by finding the funds for the formation and maintenance of the Rajkote Local Corps, and by encouraging their sons and relations to take service in it with the view of obtaining commissions in the Regular Army. The fact of its being a local corps and associated with the college would be a further inducement for young chiefs to join and see whether they liked the military profession. Some of them would, perhaps, prefer to continue to serve in the Local Corps; this of course, might be permitted. Others, on the other hand, might find out that they had made a mistake and could revert to more peaceful pursuits; but we are persuaded that the majority would seek commissions in the Regular Army, most probably in the cavalry at first, but by degrees, and amongst those who found themselves better on foot than on horseback, there would be many applications for commissions in the infantry. If this experiment were found to be a success, similar military training schools could be organized at Ajmere in conjunction with the Merwarra Battalion and at Indore and other places. In the event of this Local Corps being formed at Rajkote, there would be no necessity for the retention there of the regiment of infantry and the squadron of cavalry of the Regular Army, who would be available for employment elsewhere, and their barracks at Rajkote could be handed over to the Local Corps. The country all round about the Joonaghur District abounds with dacoits, who ought to be suppressed, and could be suppressed if the Local Corps were utilized for that purpose; and in their suppression the young chiefs would learn something of practical campaigning.

The officers of the corps to start with should, of course, be men of caste, Mahrattas, Sikhs, Rajpoots, Mahomedans, and so on. The men would be carefully selected from other regiments. The older boys from the Rajkumar College would fall in on parade with the regiment, and after their last year at college they would be given commissions in the Local Corps. After a probationary period of two or three years they would be drafted off into the crack native regiments. They would have been attached to the Local Corps as Jemedars, have been transferred to the regular Native Army in the rank of Jemedar, and then they would be raised by selection to the rank of Subedar. There is little or no doubt that even the native princes would be glad to enter a crack regiment, such, for instance, as the *Shahazadah ka Pultan*, or Prince of Wales's Own. In the Bengal cavalry regiments more especially, and even in some of the Bombay cavalry regiments, a few men of standing are beginning to come in, and in some cases they bring a large following of excellent soldiers with them. Another pressing military problem of the day is the utilization of the armies of the Native States. To some extent this must be accomplished by European agency, but the presence of too large a proportion of English officers would always be jealously regarded. Here the young chiefs who had been trained at the Rajkoomar College would be very useful. The best and most intelligent of them might be encouraged to volunteer to serve in one or other of the armies of the Native States. They would come with the highest training at present possible to native officers, and their presence, unlike that of the European officers, would not occasion jealousy or distrust. Some day we hope to see an actual Indian Sandhurst, and before long much greater facilities and higher rewards will, we are convinced, be open to the natural leaders of the military races of India. But, in the meantime, we commend the simple and easy suggestions we have explained above to the careful consideration of the military authorities and of Government.

IMPERIAL DEFENCES.

Sir Charles Dilke's new article in the *Fortnightly Review* sketches his ideal of a British defensive organization. His first condition is freedom of the fleet from the calls of local defence—a principle which is universally conceded, but which, under existing arrangements, is most flagrantly violated. It must be obvious to the dullest intellect that if Portsmouth and Plymouth, Gibraltar and Malta, Bombay and Hongkong, Cape Town and Esquimalt, our great maritime fortresses and coaling stations scattered all over the world, were so equipped as to be thoroughly capable of defending themselves without any assistance from the fleet, the effective strength of our Navy would be immensely increased. There would still be abundance of work for our ships-of-war in guarding the chief trade routes by which the absolutely necessary supplies of food are poured into England. Should the vessels have to be withdrawn for the duty of defending coaling stations or for making a demonstration in home waters, our commerce would inevitably go to pieces, the ocean trade routes would be closed against us, and the country would be starved into submission. Moreover, only with a fleet free to act in every direction would we be able to strike an offensive blow at our enemy, and without such power we could never hope to bring a war with such a power as France to a successful issue. Accordingly, Sir Charles Dilke places in the forefront of his argument the absolute necessity of rendering our great seafortresses and our important coaling stations absolutely independent of the Navy. He would, without regard to expense, finish and arm them as rapidly as possible, thus setting free the fleet, and securing for the ocean squadrons places where they might run for safety, for replenishment of fuel and stores, and for refitment. The soundness of this advice cannot be impugned; prompt action on the lines laid down is obviously the first essential to the safety of the Empire. Since Sir Charles Dilke penned this article, the Government have announced their intention of spending three millions on the defences of ports and coaling stations. But the expenditure is to be spread over a period of three years, a delay which is strongly to be deprecated seeing that the admission is made on all hands that without the works and armaments contemplated, the stations are at the mercy of an enemy's cruiser unless guarded by our own fleet. In a word, the absolutely essential minimum of defences for our great military and commercial ports is not to be completed till 1891, and, as our military correspondent aptly puts it, "if the world is not turned upside down by that time all the present appearances are very deceitful." Sir Charles Dilke has really performed a great public service in rousing public feeling on this subject. We regret that the Government have not more correctly interpreted the sense of the country, and have not boldly asked for the whole sum "down money," to use a homely phrase. We feel assured that the amount would have been granted without a grumble from any influential quarter. Sir Charles Dilke's clear and incisive statement of the condition of affairs has thrown no small discredit on Lord Randolph Churchill, and the latter's platform cry of retrenchment in the Army and Navy would not have awaked a single responsive echo in a House of Commons roused to a sense of grave national danger. The Government certainly had a chance to repair the neglect of many years. It is deplorable that they have let it slip by, or at least adopted a remedy which, in view of the critical state of European affairs, can at best be described as merely a tinkering one.

To return to Sir Charles Dilke's article, we find that his second ideal principle is that garrisons in all colonial fortresses and coaling stations should be mainly provided by local help, the mother country retaining always a large staff of specially well-trained officers for the purpose of organizing and commanding local levies in war. From this general rule he would exempt the Mediterranean fortresses, these standing on a different footing inasmuch as they are the nearest centres from which might be drawn immediate, if inconsiderable, reinforcements for Egypt and for the East. In every other case, where practicable, he would entrust the defence to local troops, which would not have to give their whole time, or anything like it, to soldiering, provided always that there was a nucleus of well-instructed men and plenty of thoroughly efficient officers. The requirements for India remain to be considered, and the former articles of the series have foreshadowed Sir Charles's proposals. He would have separate military organizations for home and for India. At the present moment, he argues, our whole system of organization for the regular army at home is built upon the necessity of keeping up our Indian forces, home defence is made subordinate to Indian defence, and we are running the grave risk of having large and growing extremities but a weak heart. But a blow at the heart would destroy British imperial life in the extremities. We have, therefore, unlike all other powers, a double danger to meet, and only separate arrangements for home and for India can render both safe from attack. The word "separate" is, it must be confessed, rather an ugly one at the present moment, with all its Irish associations. However, Sir Charles is careful to explain that the proposed separation of the two forces really means closer intercommunication than at present. There would be full facilities for transfer and exchange among officers, and even to a limited extent among non-commissioned officers and men. The supreme command of both armies would rest at home, and in time of war the two sections would act anywhere and everywhere in each other's support. The "separation" would only amount to differences in the period of service and in general organization. The Indian or Asiatic Army would have large battalions composed of men enlisting for ten or for twelve years, as might be decided upon; the home army would be recruited chiefly by short service with leave to extend the time in the ranks or to volunteer for Asiatic service given to men of good character and physique. The general principle that a long-service army is necessary for Asiatic warfare, and that a short service system with large reserves would best

serve our turn at home, is now generally admitted by military experts. Lord Wolseley and Sir Frederick Roberts have both homologated it, and reform on the lines laid down by Sir Charles Dilke is almost certain to be taken in hand in the near future.

Sir Charles Dilke's scheme also contemplates raising both the militia and the volunteers one step higher in our military system. In his ideal army nearly all our regular soldiers would be fighters. The militia would be used for lines of communication, for occupying the ports which any English expedition must hold, and even for sieges; while the volunteers, in their absence, supported by a large force of field artillery, would take entire charge of the defence of Great Britain. Moreover, from the militia and the volunteers together would be drawn all those subsidiary services, such as medical, post office, commissariat, and transport service and even the work of ammunition columns, all of which are so important and so necessary, and yet form at present such a terrible drain on the fighting strength of the regular army. In this way, all the regular troops would be freed for active operations. Our military organization would thus be as follows:—India, with a long service army resting on its own depôts at home, recruiting for itself, and not perpetually destroying the home battalions by calls upon them for drafts; England, with a short service home army, each regiment localised and recruited from its own district, the local militia and volunteers affiliated and moulded into one harmonious whole, and the whole force capable of prompt and easy mobilisation; the reserves ready for active service with the regulars, and for filling up gaps; the militia available for garrison work across the seas and for holding lines of communication; the volunteers assisted by a sprinkling of regular troops and especially by trained officers, prepared to take care of home defence; militia and volunteers combined supplying all subsidiary services; and, lastly, the colonies, providing their own garrisons which would be to a large extent commanded and trained by spare officers educated at home, though many of them might be colonists. Sir Charles promises in his next and last article to show us how the necessary field artillery for the volunteers may be provided on economical principles. In the present article he has sketched an ideal picture of what the British army should be. The completion of his task will be to show what practical steps may be taken to approximate to this ideal.

EDUCATION IN GERMANY AND INDIA.

Professor Forrest has done a great work in a short holiday. When he went to Europe lately on three months' privilege leave, the Bombay atmosphere was charged with educational changes and schemes for technical education. He made it, then, his business and pleasure to enquire thoroughly into the system of higher education and technical education in Germany. He resided, in turns, at Freiburg, at Futwargen, and Karlsruhe, all in the model state of Baden, and then he paid a visit to Strasburg. In his lecture last Tuesday he gave us the results of his experiences, and they were, as the Hon. Forbes Adam said, most interesting and most instructive. "The most important lesson," says Professor Forrest, "that I learnt during my recent tour in Germany was the one that it was not by technical education alone, but by technical education grafted on a sound system of general education, that Germany has made the progress in manufactures which now makes her so formidable a competitor to all nations." And he proceeds to show that German education is one harmonious structure from the Volks-schule, where the child of the people learns to read right up to the University. He visited Baden in the first instance, because the educational system there may be regarded as fairly typical of the educational system of the whole Empire, and he went first to the little town of Freiburg. Here the cost of education in the lowest classes in the Gymnasium is forty-four shillings a year; in the higher classes, fifty-four shillings; in the highest, sixty-four shillings. The entrance fee is four shillings. "School education," he adds, "is not only superior, but cheaper than secondary education in India. In Germany the price paid by the parent for higher education is about £3 per annum, and the actual cost about £7. The principle is thus conceded that the middle and upper classes have as much right to have their children's education provided and partly paid for by the State as the poorer classes, and the position is perfectly logical." But what seems to have most pleased Professor Forrest as an Anglo-Indian expert in education was the immunity of the students from the worries of continual examinations. At the Gymnasium the boys have to pass the Abiturienten, or Leaving Examination. This is the examination on which depends admission to the Universities, to special schools, and to the civil and military service of the State. Professor Forrest trusts that the day is not far distant when a similar system will be introduced into India. "In Germany," he continues, "a man has to pass only two examinations, the 'Leaving Examination,' which I have described, to prove that he has been trained to acquire knowledge, and the examination for the Doctor's Degree, after the University course, to prove that he has made himself a master of some branch of knowledge."

From Freiburg the learned Professor went to Futwargen, the centre of the clock and watch-making trade in the Black Forest, and the home of an art school and technical institution. In the latter the tuition is divided into three yearly courses—preliminary, intermediate, and final. The conditions for entrance are as follows:—For preliminary course, the candidate must be 14 years of age, and bring a "leaving certificate" from a Government or Board School. For the intermediate course, the candidate must be 15 years of age, and he must have attended a Mechanics' Institution with success, or have worked for some time in the watchmaking trade or other industry, and be able to show that he is able to do all that is required of him in the preliminary. For the final course, the student must be 16 years of age, and give proofs of knowledge and accomplishments which have been attained in the intermediate course. Much that the lecturer says about this institution should be of service to those now engaged in developing a scheme of technical education for Bombay. At Karlsruhe, the School of Architecture has been founded to perfect by a system of teaching the following trades:—Master mason, stone mason and carpenter; Building-tradesman, joiner, glazier and locksmith; Certified workmaster, foremen and draftsmen; Engine-builders and other workers in metal; Teachers of trades or professions; while other craftsmen, such as tinsmiths, turners, slaters, gardeners, road surveyors, stokers, and engine-drivers have the opportunity of visiting the school for a single course. Professor Forrest describes in some detail the University system, first at Freiburg and afterwards at Strasburg. But it is beyond our present purpose to follow him here except in his general remarks. "The Germans," he says, "have spared neither time, trouble, nor money to make higher education thorough, but the Indian Government has refused to understand its needs and to carry it out thoroughly. It has founded schools and colleges, but has shrunk from the trouble and cost requisite to make them efficient. Gentlemen, when I read that Government has not sufficient funds requisite to place our educational system on a sound basis, I think of the wise words once uttered by the eminent statesman and educationist who rules over the Presidency. Lord Reay, in the eloquent Rectorial address delivered at St. Andrews, said:—'Finality in University reform may suit the Treasury, but you cannot make a bargain with knowledge, which is an expanding quantity.'"

German professors and German travellers alike must have been astounded at the vitality of a Professor from India, which is commonly supposed to sap the energy and deaden the enthusiasm of the liveliest scholars. Not so with Professor Forrest. He was always open to discussion, and always eager for the fray. "Gentlemen," he says in his lecture, when he contrasts Germany with England first, and then with India, "I wish a knowledge of India was taught in every school board in England. I examined the lowest class in the Gymnasium in the Geography of India, and found them better acquainted with it than the majority of winter tourists. In fact, gentlemen, I have made it a hard and fast rule never to discuss the Land Tenure of India or the Salt Tax with any traveller who does not know where Delhi is, and this has saved me many a weary and unprofitable discussion." We feel for the Professor, and, as we are human, we feel also for his fellow travellers. But our quibbles are forgotten when we come to his peroration. It is exactly and precisely to the point. He says, with India in his mind all through:—"It is by means of this comprehensive and thorough system of education that Germany has built up that stately fabric, the German Empire. The German Universities—centres of art, science and letters—have moulded German nature into the Imperial type." It took, however, half a century for the national spirit to spread from the centres of learning and for the new citizens to found a United Germany. "For India," he adds with some eloquence, "a still nobler goal is placed in view. She has to take her place in that wide Imperial system which extends to every quarter of the globe, and is destined, as far as human judgment can foresee, to insure the predominance of English influence, of English institutions, and of the English language throughout the future history of m kind. The preparation for such a part invo a high and strenuous discipline, and the dut the highest education is to regulate the n aspirations which are common to our huma and to supply the discipline which alone safely wield them. If we wish to convert carping parochial spirit of the hour into Imp patriotism, we must follow the example set u Germany, and make our Colleges and I versities real, that is, productive as as receptive centres of learning." If we l quoted largely from Professor Forr short experiences in Germany, it is because he says much that is worth quoting, a good deal that has a direct bearing upon own educational bearing, and these specia marks seem to us to gather increased force, v they are placed immediately one after other.

NEW ASOKA INSCRIPTIONS.

The meeting which the Asiatic Societ Bombay held on the 15th inst. should ta high rank in the proceedings of the institu It was held to bid farewell to Monsieur E Senart, who was about to leave for Europe the day, and to hear the guest of the day read a p on certain new Asoka Inscriptions. The c sion was an interesting one, and the bril Frenchman, whose visit, as Lord Reay said, been one of the luminous points in our w season, did not disappoint his audience. M sieur Senart is no ordinary cold weather veller. Manserah, Shahbaz-Giri, Girnar, three "stages" of the journey he planned Paris, are not exactly on the beaten track. M sieur Senart's stay in India altogether exten we believe, only over four months. Yet no will complain of Monsieur Senart that he not keep silence as a cold weather to should. And the notes of a travelling philol which he placed before the society will be co me to the general body of scholars everyw The occasion had an interest of its own, too, which, we are glad to think, was not forgotten. The wild valley beyond Peshawur, which was one of our traveller's desti ned stages, derives its interest from the fact that there is graven on the rock there an inscription, which is almost word for word identical with the, to us better known, inscription on the rock at Girnar near Junagar. The Girnar inscription is written in an uncouth character, which until Prinsep deciphered it had been absolutely unknown for a thousand years. There are other specimens of this character at Allahabad and at Delhi, and history tells us of more than one Emperor of India who vainly offered large rewards to the wise man who should read this writing for them. The chief object of Monsieur Senart's visit to India was to supplement the patient study of years, which he has devoted to these inscriptions, by direct inspection of them. The result is that he has been able to settle authoritatively the text of many passages, which had hitherto been doubtful. Monsieur Senart stands with the Bombay scholar, as we are proud to call him, Dr. Bühler, at the head of those who have laboured since Prinsep at inscriptions, which contain the only contemporary record we have of the India of the third century before Christ. But the admirable and deeply interesting translation of the famous edict of toler ation which Senart gave his hearers on the 15th inst. is an improvement, not only on Prinsep and the other pioneers in this matter, but on Senart himself. Scholars will gladly accept his assurance that he has been able to do similar work for the other edicts of Asoka, and eagerly expect, with Mr. West, the treatise in which he will sum up the results of his journey. It is exactly fifty years ago since the first translation of the Girnar Inscription was read to the Calcutta Society by James Prinsep, who had dragged it, letter by letter, from the oblivion of centuries. It was well to remember that the material Prinsep had to work on was a cloth copy of the inscription made by the Rev. Dr. Wilson, President of the Bombay Literary Society, and by him sent round, as Prinsep notes, "with the most liberal frankness under a careful hand by sea to Calcutta." In communicating the latest news of the Asoka Inscriptions to the President and members of the Bombay Branch, Royal Asiatic Society, Monsieur Senart fell in, it will be seen, with a certain fitness of things.

Next to his translation of the edict of toleration, the most interesting part of Monsieur Senart's paper was, perhaps, his account of the discovery by Captain Deane, Assistant Commissioner at Hoti Murdan, of the new inscription at Shahbaz-Giri, which has put us in possession of material for a perfect text of that edict. Captain Deane is a most lucky man. We are far from suggesting that he does not deserve his good fortune. But if he is a persevering and enthusiastic amateur explorer, he is also a decidedly fortunate one. All the world knows now that the inscription at Girnar, which at first yielded to Prinsep's study little beyond the name of a Greek King, Antiochus, has proved to be one of several sets of Fourteen Edicts engraved on the rock by King Piyadasi, the Asoka of the Southern Buddhists, grandson of Chandragupta, whose date B. C. 300 settled for us by Greek accounts of him, is the one fixed point in Indian chronology before and for centuries after Christ. As Monsieur Senart eloquently said, these inscriptions appear suddenly in the dark night which covers the distant part of India a light as bright as it is unexpected. They are the most ancient dated monuments of India, the most ancient dated witnesses of its religious life and of the progress of Buddhism. It need hardly be said that they have been, ever since Prinsep deciphered the alphabet in which they are written, the object of the most careful study. The distinguished Frenchman who left us last week came to India with the chief end of making a pilgrimage to the inscriptions of Asoka. He was met on the way with the good news he communicated to our Society on the 15th inst. At Muttra he was shown by Dr. Burgess, Archæological Surveyor to the Government of India, a photograph, or a rubbing as it is called, of an inscription recently discovered by Captain Deane at Shahbaz Garhi, in the Yusufzai country some miles to the north of Hoti Murdan. When he left Paris, Monsieur Senart can hardly have hoped that such a windfall was in store for him as to be the first to identify a new and complete version of the most famous and interesting of all the Edicts of King Asoka. Yet so it was. The paper put before him by Dr. Burgess undoubtedly contained, as Senart at once recognised, the Twelfth Edict in an almost complete state of preservation. It was hitherto been missing from the set at Shahbaz Giri. Experienced and devoted archæologists have searched the place for it over and over again, and have not found it. The whole Archæological Survey has done its best and has failed. The prize is carried off by Captain Deane, and carried off before the ink is dry of Dr. Burgess's recent indignant protest to Government against "amateur archæologists" being allowed to find anything.

We cannot close this article without a mournful tribute of respect to another scholar, well known to Monsieur Senart, and held in high regard by him, too little known and regarded here. For the news of the death at his house in Walkeshwur on Friday last of Pandit Bhagvanlal Indraji reaches us as we write. On the day before his lecture Monsieur Senart spent some time with one in whom he recognised an eminent colleague, having previously ascertained that the visit would be agreeable to the dying man. It had been M. Senart's first care, when he reached Bombay in November last, to seek out the good Pandit. He was shocked now to see the ravages disease had made. But Bhagvanlal, who had been eagerly expecting the visit, l to greet his friend in a way the rs by will long remember. His eye kin he listened to all M. Senart had to tell of details, which they two in Bombay coul appreciate. The only murmur of impatie which escaped him was when he learned tha riend had actually been at Junagar, "m ve place," and he not able to accompany him there. "I am so sorry, so sorry." Monsieur Senart was spared the pain of knowing that the end had come before he left Bombay. Bhagvanlal died quietly on Friday afternoon at five o'clock. He has left his manuscripts to the Society, asking that they may be placed near the Bhau Daji collection with the inscription, "The gift of Bhagvanlal Indraji, pupil of Dr. Bhau Daji." This will, we doubt not, be done, and all other fitting steps taken to perpetuate the memory of a man so dear. Not only his friends, but our whole community is poorer by his death.

TEMPERANCE IN THE ARMY.

General Roberts's speech on temperance at Meerut will produce a good effect upon our troops in India, for the British soldier, whatever his faults may be, appreciates any genuine interest taken in his welfare by his superiors. His Excellency laid particular stress upon the good work done by Mr. Gregson, and now continued by Mr. Beatty. No doubt the Gregson Temperance Societies materially contributed to the increase of temperance in the army: and too much praise cannot be given to the person whose generous and persevering efforts did so much to reclaim our soldiers from the most degrading of vices. But when we consider the subject of temperance in the army, it is essential to consider the causes which have very materially contributed to a decrease of drunkenness in the service, as well as the means necessary to realise the hopes which his Excellency expressed of one day commanding an army of temperance soldiers. Strange as it may seem, the removal of the restriction to obtain drink, except at certain hours, has done more to promote the cause of temperance than all the Temperance Societies together. Formerly the canteen was open from 12 till 1 for the issue of beer, and in the evening one hour was allowed for rum and two for beer. A pint of beer was served to the men at each issue; and as they knew that unless they obtained the limited allowance at the prescribed time they would have to go without it, many made it a practice of drawing their allowance, whether they really wanted it or not, and thus gradually contracted a habit of drinking. Those who possessed money and wished to indulge, had no difficulty in prevailing upon others to draw their allowance of liquor for them, hence, notwithstanding the limited quantity allowed to each soldier, it was possible for the men to obtain as much drink as they were able to pay for; intemperate habits, thus engendered, grew upon the men; and when money was plentiful, and the majority of the men drank their allowance, those who were disposed to indulge, and could not obtain what they wanted from the canteen, had recourse to adulterated spirits or poisonous country liquor. But since the canteens have been opened to the men at all reasonable hours, and they can obtain as much beer and porter as they wish, they take it only when they feel disposed; and thus the habit of drinking at stated hours has been gradually discontinued, and men, who under the old system would look for their beer at 12 o'clock, or their rum at the prescribed hour in the evening, do not now even give it a thought. Together with the opening of the canteens and the unlimited sale of beer, the short service system has done much towards promoting temperance in the army. Under the Short Service Act our army is composed of young men, most of whom are scarcely out of their teens, and, as is always the case with young soldiers, for the first three or four years' service they have splendid appetites. The rations allowed are usually not sufficient for them, or if sufficient, not of a kind that they can relish. Consequently, they spend the greater part of their pay in butter, milk, and extra food. By the time they begin to lose their appetites, and, under the old system of long service, would probably have taken to drink, they begin to think of home, and of the necessity of saving a little by the time they leave the service.

With the natural inclinations and interests of our short service soldiers so favourable, the temperance societies have a wide field of usefulness open to them, and can undoubtedly do a great deal of good. But while we approve of his Excellency's suggestion, that chaplains should take an active part in the good cause, we strongly deprecate the introduction of the religious element into soldiers' temperance societies, and we do so both on principle, and because it would, to a great extent, defeat the object which temperance societies are intended to attain. An essential object of regimental temperance societies ought to be to draw together and unite in one body all temperance men, whose numbers and united efforts would exercise a direct moral influence over their comrades. But if the religious element, as suggested by his Excellency, were introduced into regimental temperance societies, it would inevitably excite sectarian feelings, cause division and dissension where all should be union, and give rise to an antagonistic spirit, which would go far to render abortive the efforts of even the best organized society. Our regiments are composed of men of every persuasion, and whatever their moral defects may be, experience has clearly shown that they have strong religious principles, which, when called forth, exercise a direct influence over their conduct. It is certain that no Catholic soldier would, or could, attend, or do anything to promote a meeting or society over which a Church of England chaplain presided, if the least semblance of religion was introduced; while it is equally sure, that Protestants would keep aloof from any meeting in which the Catholic chaplain brought religion to bear on the object in view; and we do not think we are far wrong in saying that men of other religious denominations would be equally opposed to meetings having either a Church of England or Catholic religious tendency. What is really essential in every regiment, or at least in every military station, is a society based upon purely temperance principles, which would leave the religious element aside, and advocate the cause solely from a social and moral point of view. Men of every persuasion could and would attend the meetings, in which the chaplains could all take an active part, and combine together to make them as attractive as possible to the members. Beside this regimental society, each chaplain might with great advantage have one attached to his church or chapel, in which he could bring his influence to bear more directly on the members of his own persuasion. For this purpose a reading and recreation room should be established in the church compound, or near the chaplain's residence, so that he could frequently visit it, and encourage the men by his presence. Such institutions, if properly managed and made attractive, would not only be self-supporting, and tend much to infuse a healthier moral tone in the men, but would most effectually contribute to the cause of temperance; for many men who would otherwise go to the canteen to escape the dullness of the barrack room would prefer an evening's walk, if there were the additional inducement of several hours' amusement out of barracks.

Thus far we have spoken of temperance societies; but as there is and must be a large proportion of soldiers who object to total abstinence, and are averse to having any restrictions placed upon them, it is necessary to consider the best means of withdrawing them from the canteen, and from the possible danger of contracting intemperate habits. The ideas of his Excellency on this point, if properly carried out, would perhaps be the most effectual. The institution, in which he proposes to bring together both temperance and non-abstinence men, should have a library well stocked with works of a light, interesting, and wholesome nature; a reading-room supplied with good periodicals and papers in which the men take an interest, particularly illustrated papers; it should also have a recreation room furnished with all the popular games; an unlimited supply of cards; and, most important of all, several good billiard tables. Light refreshments would be a great attraction, as there are many young soldiers who do not care about joining temperance societies, but yet infinitely prefer a good supper to drink. If no other suitable room was available, the recreation room might be used as a place of popular amusement, where penny readings, concerts, and lectures on interesting subjects might be given to the men. In these entertainments, the officers so disposed and the chaplains of each denomination might unite in taking an active part. In endeavouring to promote temperance in the army, the first consideration must be to provide rational occupation and amusement for the many spare hours which hang so heavily upon the hands of our soldiers, and the means which we suggest, together with gardening, cricket, and sports, which, with a little encouragement and support, the men would get up for themselves, would amply meet the difficulty. While approving in general of the Commander-in-Chief's plan for the promotion of temperance, we must, however, strongly oppose the closing of canteens. For there will always be a certain number of men in every regiment, who in spite of every effort in the cause of temperance, will drink, and we believe it will be much better and cause less crime to allow them to get good wholesome liquor in barracks than to drive them to have recourse to the poisonous native liquors in the bazaars. Another point which has been very little noticed, but upon which the temperance of a regiment very much depends, is the manner in which the officers and non-commissioned officers treat the men. The private soldier may be illiterate and spring from the poorest class of society, but he possesses feeling, and strongly objects to be bullied, or treated as a mere machine without sense or feeling; and many good men are driven to drink by the inconsiderate, irritating, and domineering conduct of those placed over them. It would, therefore, conduce much to the temperance cause, if commanding officers would imperatively insist upon officers and non-commissioned officers treating the men with all the kindness and consideration consistent with proper discipline. Temperance has undoubtedly made rapid strides in the army during the last few years, but its ultimate success must very much depend upon the amount of encouragement and support which the officers of the army give to it. Hence, it is most gratifying to see the earnest and hearty interest which the illustrious head of our forces in India takes in a movement so beneficial to the service at large, and to the individual soldier in particular.

"COLLEGE HISTORY OF INDIA."

Mr. Talboys Wheeler has attempted to write the history of India in one very small volume, and has failed because he has attempted an impossible task. It is impossible for any single man to digest the contents of a vast library or crowd them into a small book. Indian History is so vast a subject, the materials for constructing it are so inexhaustible, and the problems it raises are so intricate and endless, that a single labourer in the field can do only a small portion of the work, however great may be his industry and gifts. Mr. Talboys Wheeler issued

some ten years ago a "Short History of India," which was not a success owing to the writer attempting to put too much in a small compass, and we fail to understand why he should now publish a shorter History of India. The title "College History of India" is misleading. Most persons would naturally suppose a College History was an expansion of the work and not a contraction. College students who have to study Elphinstone and Mill will not derive much benefit from Mr. Wheeler's bald summary. It will neither add to their stock of knowledge nor stimulate their understanding. Practice has not improved Mr. Talboys Wheeler's style, for it still consists of short sentences and curt paragraphs thrown together with little art. The arrangement and proportion of the different periods is as faulty as the proportion of the sentences. It is somewhat audacious for a writer to attempt to give in forty pages an account of the religions, the civil institutions, the arts, the sciences, and the literature of the Hindoos. No kind of composition can well be more worthless than the compiling of summary statements like the following:—"The Hindoos were eminently religious." * * * "The term philosophic is essentially Greek. It signifies 'a lover of wisdom,' and was applied in Greece to all learned men." There are some things which even college students are supposed to know. The statement that "Buddhism was a death-blow to caste distinctions" is a little startling, because one labours under the delusion that caste exists in the present day. The account of Brahminism and Buddhism is so meagre that it is worthless. Neither the student nor the reader wants a barren account of the rise of Buddhism the decline of Brahminism and the ultimate triumph of the latter faith; but what they do want is some light to be thrown on the religious, social, and intellectual advance of the natives. A historian is required who will deal with Hindooism as Mr. Green dealt with Puritanism. It is not the outward show of Hindoo national life, but the inner development that requires elucidation and discussion.

The Mahomedan period receives a little fuller treatment at the hands of Mr. Talboys Wheeler, but the space he has allowed himself is not sufficient. Forty years after Mahomed fled from Mecca to Medina, an Arab force invaded Cabul and penetrated to Mooltan, but there was no systematic invasion of India till the time of the Khalif Wulud (711), when Mahomed Kasim landed at Dewal, a city somewhere near the modern Kurrachee, and after many severe engagements conquered the whole of Sind. But the conquest was merely temporary. The Arabs were expelled, and for two centuries India was free from invaders from the north, when religious zeal and a longing for the treasures supposed to be hidden in the palaces and rich idol shrines of India caused Mahmud of Ghazni to turn his attention to the invasion of the land. Mahmud made his first of thirteen invasions into India in the year 1000. In his twelfth and last expedition he crossed the great desert, entered Gujerat and attacked the far-famed Temple of Somnath. Mr. Wheeler after describing the assault of the town writes:—"The building was vast and gloomy with a single lamp to lighten the darkness. A pillar nine feet high represented the God Siva. The Brahmans wanted to ransom it; but Mahmud cried out that he came to destroy idols, not to sell them. He raised his mace, and clove the pillar in twain, when a hoard of diamonds and riches fell upon the floor, which had been hidden inside the pillar." Mahmud was a great warrior, but even he was hardly capable of cleaving a stone pillar in twain by a blow of a mace. The idol pillar at Somnath was a lingam. The Arab chroniclers describe it as five cubits high, two of which were set in the ground and it was destroyed by a fire lighted round it to split the hardness of the stone. Mahmud striking the image with his mace and the jewels rolling out is one of the mock pearls of history. Gibbon, who derived his knowledge from the Persian historian, first gave currency to the romantic story. About the time when the Great Charter was signed at the marsh flat of Runnymede, India became an independent Mahomedan kingdom, and the dynasty of the Slave kings, which lasted eighty-three years, commenced. It was succeeded by the House of Khilgis, a Tartar tribe, who had long been settled in the Afghan country. They were followed by the Tughlak Sultans, during whose reign the terrible Scythian shepherd, Teimur Lane crossed the Indus, and carried fire and sword through the provinces he passed. Delhi was taken and pillaged, and the desperate courage of the inhabitants cooled in their own blood. Teimur caused himself to be proclaimed Emperor of Delhi; but he soon withdrew from India, leaving anarchy and desolation behind him. In 1412 the Tughlak dynasty came to an end, and was succeeded by the four Seiads who professed to regard themselves as Viceroys of Tamerlane. They scarcely possessed any territory beyond the walls of Delhi. In 1526, on the fatal field of Panipat, situated fifty miles from Delhi, was fought a bloody and decisive battle, in which the Indian army was vanished and the sovereignty passed into the possession of the descendants of Tamerlane who found the line of kings known in history by the name of the Great Moghuls. Mr. Wheeler attempts to give an account of the rise and fall of the Moghul Empire, in two short chapters, and the result is that it is useless and misleading. There is no mention of the Ain-i-Akbari, which is the best record of Akbar's policy and of the condition of the country under his rule. During the reign of Aurungzeb we are told:—"Flattery pervaded all ranks of society. If the sovereign uttered a word in durbar the grandees cried out "wonderful"; if he pleased to declare at noon that it was midnight, they would have said, "Behold the moon and the stars." Does Mr. Wheeler chronicle this fact because he considers it unique? In all quarters of the world courtiers are flatterers. In one respect, to judge from a remark made by Mr. Wheeler, Aurungzeb was superior to most men, even to those who write books—"Aurungzeb was bitterly conscious of his own imperfect education."

The account of the rise of European power in India is as worthless as that of the Moghul Empire. But it is relieved by strokes of unconscious humour. Mr. Wheeler gives us the useful and interesting information "that the Portuguese in India were extremely haughty. They all wore swords, and affected to be noblemen or gentlemen." In a College History of India, meant for advanced students, we are told that "the Dutch were the carriers of Europe, and had been so for many generations. It is extremely valuable to know that "Bengal was the land of promise; the land where twenty chickens could be bought for a rupee." We are also informed that "the harbour at Bombay was magnificent, one of the largest in the world." Does Mr. Talboys Wheeler mean to imply that it is no longer magnificent, and that it has shrunk in size? It is also interesting to learn that "the sea abounded in fish." The same original remark may be made about the sea in the present day. The following ought to have been substantiated by the authorities from which it is derived:— "The toad grew as a big as young ducks and spiders as large as a man's thumb." The remark made by Mr. Wheeler regarding the Afghan applies to the Bombay toad; it has undergone strange transformations. Mr. Wheeler dismisses the administration of Warren Hastings on which the fair fame of the English depends, with the comment that the real truth will never be known. "But these are scandals of a hundred years ago, dead and buried like the individuals implicated." But the judgment of history never dies, and it will one day pronounce in favour of Hastings on unimpeachable evidence. Here we must finish our quotations. They do not extend over the whole work and they only bring to light glaringly foolish statements. We have looked in vain for any portion of the work which we could point out as deserving of praise.

A STANDARD OF LENGTH FOR INDIA.

The Bill that has been introduced into the Supreme Legislative Council having for its object the fixing of the English yard of thirty-six inches as the standard measure for the whole of India will effect a much-needed and long-desiderated reform. It will sweep away a whole host of anomalies and incongruities, some of which have in the past fallen little short of being direct invitations to fraud. We have been working away in India with a confusion of local standards of length measurement that has assuredly never been worse confounded in any country in the world. The "gaz" of the native bazaars has hitherto been our only standard; but so far from denoting a fixed measurement like the English yard it is a widely varying quantity, in some places meaning as much as 56 inches and in others as little as 18 inches. In the Presidency towns an attempt has long since been made in the direction of securing a standard of length, but it has proved a very feeble and unscientific one. In Calcutta, Bombay, and Madras local standards of measurement are kept in the office of the Commissioner of Police, and all transactions in each city are regulated by these. The standards, however, vary in the different towns, and there is, further, no provision as to how each standard is fixed nor any guarantee as to its correctness. Outside the Presidency towns local custom simply has regulated the number of inches that constitute the "gaz." Thus the "gaz" or yard of Cawnpore measures only 34 inches, and goods stamped correctly for the Cawnpore market have been freely passed off by unscrupulous traffickers as genuine measurement in markets where the "gaz" means 36 or more inches. On such frauds as these there has up to the present been no check whatsoever, and it is clear that in a country like India where the great proportion of the people are unlettered and unsophisticated the application of the maxim *caveat emptor* cannot be insisted on. In England even we have recently seen a strict measure passed protecting the unwary from being trapped into purchasing goods impressed with a fraudulent trade-mark or stamped with a false description as to length. In the case of India, therefore, how much more necessary is a similar enactment? Indeed, the change in the English law has rendered the fixing of a standard of length for India absolutely imperative; if false stamping is to be done away with, the English Act must be backed up by a measure on similar lines here, and a uniform standard of length is the essential preliminary to such legislation. That the English yard should be adopted will commend itself to the vast majority of the commercial community. An attempt was made some years ago to introduce the French metre, but this would palpably have been a grievous blunder both from a political and from an economical point of view. In many districts of India and in all the large sea-board cities the yard, foot, and inch are already quite well understood by the people, the Public Works Department as well as commerce having done much to popularize the English scale. All over the peninsula native carpenters have for years used the English foot-rule, and native hawkers have sold their cloth by the English yard. Apart from all other considerations, therefore, the English standard and not the French one is clearly the most convenient measurement for general adoption. Moreover, varying standards in England and in India would have thrown the commercial relations between the two parts of the Empire completely out of gear. The political objections to the introduction of the French metre are also obvious. These considerations would have hardly deserved mention; but we observe that one of the native members of the Viceroy's Council actually expressed regret that the unit of the French metre is not to be adopted. With the English yard fixed as the standard of length throughout India the working of the piece-goods trade of the country will be immensely facilitated. The change will also, as we have seen, pave the way for legislation on the lines of the Merchandise Act in England, whereby the false description of goods will become a thing of the past. In view, however, of the acknowledged difficulties that are being experienced in working this complicated Act at home, it seems sound policy on the part of the Indian Government to delay for a while the introduction of the larger measure. But when we are in possession of a fixed standard of length for all India, the Supreme Council will be ready to legislate as soon as our experience of the new law in England is ripe.

H. M. S. BACCHANTE.

Her Majesty's Flagship Bacchante, with Admiral Sir Frederick Richards, K.C.B., Commander-in-Chief of the East Indian Fleet, on board, arrived in harbour on Monday afternoon from Colombo. She left the latter place on Thursday morning. The Bacchante carries 14 guns, and is under the command of Commander A. W. Moore. Since she left Bombay on the 31st of March last she has visited Colombo, Trincomali, Diago Garcia, Rodrigues Island, Mauritius, Madagascar, Mozambique, Comoro Island, Zanzibar, Seychelles, the Maldive Island, the Andamans, Port Blair, Rangoon, Calcutta, and Madras. She will remain in Bombay about six weeks, and will then probably go to Aden. The new Admiral, the Hon. E. R. Freemantle, is expected to arrive here on or about 16th proximo. H. M. S. Boadicea commissions this month at Portsmouth to relieve the Bacchante. The latter vessel will wait at Aden for the arrival of the Boadicea. The following are the names of her officers, &c. Rear Admiral Sir F. W. Richards, K.C.B., Commander-in-Chief; Flag Lieut. R. B. S. Wray; Secretary J. Carlisle; Clerks to Sec, D. C. Gillies; and E. F. E. Gipps; Captain, A. W. Moore; Commander C. J. Barlow; Lieutants F. E. Poneur, W. A. Connop, W. C. Slater, E. P. E. Jervoise, H. P. Barton; Staff Commander J. E. Tully; Capt. R.M.A., J. W. Grant; Chaplain, J. M. Morton, B. A.; Staff Surgeon, E. E. Mahon; Fleet Paymaster G. S. M. Power; Staff Engr. G. H. Weeks; Instr. G. P. Edwards, B.A.; Sub-Lieut. W. Lumsden; Surgeon H. W. G. Doyne; Assist. Pay-Mr. W. R. Dodridge; Assist. Pay-Mr. D. C. Roberts; Engineers W. Hines, J. E. Jenkins; Assist. Engr. F. W. Austin; Gunner M. Regan; Boatswains Thos. Henley and J. Boyle; Carpenter W. Weeks; Midshipmen E. K. Loving, W. F. Benwell, G. C. Ingle, H. O. Adams, C. J. Hintown, H. A. Gillett, C. Acklow, W. N. England, H. D. R. Watson, H. C. Carr; Naval Cadet, G. H. Hertzel.

Brigadier-General Sir R. Low, at present in Burmah, has been transferred from the Command of the Sealkote Brigade to the Rohilkhand district, while Brigadier-General Collett, also on service in Burmah has been posted to Sealkote.

APPELLATE COURT.—WEDNESDAY.

(Before Mr. Justice BIRDWOOD and Mr. Justice PARSONS.)

MR. CRAWLEY-BOEVEY'S RECENT DECISION.

IN THE MATTER OF POLICE SEPOY BHAWOO JIVAJEE.

This was an application for review made by the accused Bhawoo Jivajee against the conviction and sentence of four months' rigorous imprisonment passed upon him by Mr. Crawley-Boevey, Acting Chief Presidency Magistrate, on a charge of restraining and confining one Muljee Dyal, the complainant in the case.

Mr. Farran with the Hon. P. M. Mehta, instructed by Messrs. Ardeshir, Hormusjee and Dinshaw, appeared for the appellant; the Hon. Mr. Latham, Advocate-General, instructed by the Government Solicitor, appeared on behalf of the Crown; and Mr. Jardine with Mr. M. D. Registrar, and Mr. Guneshan Nilkant, appeared for the complainant.

Mr. Farran said that in this case their lordships had sent for the proceedings under section 435 of the Criminal Procedure Code, for the purpose of the court satisfying itself as to the correctness, legality, or propriety of the finding and sentence of the lower court. He had, he said, summarised the grounds upon which they contended that their lordships should interfere and set aside the conviction. The grounds were (1) that the magistrate had admitted inadmissable evidence, (2) that he found in the case facts as proved without evidence, (3) that he had taken into consideration and acted upon the evidence of Jadowjee Lukhmidas, and (4) that he had taken into consideration against the accused the conduct of his superior officers. Their lordships must have no doubt read the judgment of the chief magistrate, and the further reasons that he had assigned for his finding, and the learned counsel would not therefore trouble the court with reading it *in extenso*. It would be remembered that the offence with which the accused was charged was committed on the 29th of December last. The information before the magistrate was laid on the 3rd January last. It appeared from the statement of Mr. Crummy that the summons was served upon the accused the day before the case came on, on the 6th January, for trial. On that occasion the prisoner and his superior officer applied for time to enable them to instruct counsel for the defence. The charge that was made against the accused at that time was a very serious one. He was charged, among other things, under section 220 of the Penal Code, with an offence which involved a sentence of imprisonment for seven years. Although the accused was a member of the police force, and his application was supported by his official superior, his application was refused, and he was proceeded against on the 6th January, he being then undefended by counsel. All the witnesses called on behalf of the complainant on that occasion were examined, and the examination or cross-examination of the prisoner was concluded on that day, and much irrelevant evidence was taken. The case was then adjourned; and on the second occasion the prisoner was represented by counsel. The action of the magistrate in proceeding thus summarily with the case had, to some extent, prejudiced the accused in his defence. It was a serious step for the magistrate to take, but having taken it, the consequences could not now be avoided. The learned counsel then proposed to deal briefly with the facts of the case, pointing out the errors into which the magistrate had fallen. He also proposed to review the whole evidence and to satisfy the court that no offence had been committed. The accused was on the morning of the 29th December last standing at his post near the Crawford markets from 4 to 7 o'clock. According to the police rules there were four kinds of posts, namely, fixed posts, night posts, day posts, and temporary posts. The temporary post was so chosen as to render it extremely difficult to remove stolen property to any distance without passing the eyes of the policeman stationed on duty. These temporary posts were changed from time to time. It appeared from the examination of the accused that about that time thefts were not uncommon from the cloth market.

Mr. Justice Birdwood: It was not dark when the arrest took place.

Mr. Farran said the man was arrested within the hours of the post at which the accused was stationed. These posts were placed in order more effectually to carry out the provisions of the Police Act, which stated that whoever had in his possession or conveyed anything, which was reasonably suspected of being stolen or fraudulently obtained, or failed to account satisfactorily how he came by the same, was liable to imprisonment. Inferentially the section of the Act empowered the police to make inquiries of persons carrying property if they thought that there was reason for making such inquiries.

Mr. Justice Birdwood: The section is taken from the Metropolitan Police Act.

Mr. Farran contended that the necessary inference was that a person having possession of property in respect of which the police had reasonable grounds to suppose that an offence had been committed, they could make inquiries about the same. That was the manner in which the section had been worked by the police ever since it had been passed. According to the police rules, constables were to direct their attention to persons carrying parcels, bundles, &c., at unreasonable hours, or under suspicious circumstances, and if they had sufficient grounds for desiring to search such bundles, they could do so after making necessary inquiries into the matter.

Mr. Justice Birdwood asked if these rules were made on the authority of the Commissioner of police.

Mr. Farran in reply said that these rules were approved by Government under one of the sections of the Act he had been quoting from. These rules imposed a duty upon the police, to make inquiries with reference to these bundles, and if they were not satisfied with them, to take further steps in the matter. Having read a portion of the rules, the learned counsel proceeded to say that their lordships would see that a difficult and a delicate task had been imposed upon the police by these rules; and it was a task in the performance of which *bona fide* mistakes must sometimes occur. The only question, therefore, before the chief magistrate and also before the Appellate Court, was, whether or not the accused had acted *bona fide* in that case.

Mr. Justice Birdwood: As far as I can understand the defence, the accused said that he arrested the complainant after he had been struck by him.

Mr. Farran said that the accused was struck because, as he was not satisfied in his mind with the inquiries, he took the bundle from the hands of the complainant. It was after he was struck that the accused arrested the complainant.

Mr. Justice Birdwood: It was a very important point to decide.

Mr. Farran then referred their lordships to certain sections of the Penal Code which bore on the point. He did not think that the sections relating to and defining "offences" in the Penal Code were within the recollection of the magistrate when he wrote his judgment. In the original information of Mulji Dyal, a passage had found its way, which, if it was correct, the magistrate would have been justified in sending the accused to jail not only for four months, but for four years. The passage went to show that he (the complaint) apprehended that the accused was acting under the influence of some person or persons unknown to him, and had been instigated to arrest him in order to do injury to him.

Mr. Justice Birdwood: Is it so stated in the information?

Mr. Farran: It is so in the original information. The learned counsel then proceeded to say that there was not a title of evidence given in support of that statement, and it necessarily showed that the informant in giving his deposition was under an influence which rendered his evidence not as reliable and as satisfactory as it otherwise would be. Their lordships would agree with him that the evidence of the man who penned or caused to be penned such a circumstance, would be deprived of that weight which it would otherwise carry with it. The hour at which the occurrence, which had given rise to the proceedings, had taken place, was not clearly defined. He submitted that according to evidence it could not be placed much later than half past six o'clock in the morning. Most of the witnesses fixed it at that hour. The complainant in his cross-examination on the 18th January, after he had got a long time to think over the matter, placed it later than that hour, saying that it was five minutes to seven o'clock. On a fair consideration of the whole evidence, their lordships could not but come to the conclusion that it was about half past six o'clock. It must be remembered that it was a December morning.

Mr. Justice Birdwood: Can you tell me when the sun rose that morning?

Mr. Farran said the magistrate did not find the exact time. Although it was not dark, the light was of a dusky nature. The posts were placed from 4 to 7 o'clock, that being the time at which the authorities thought that stolen articles were generally removed. Of course, thieves generally carried on their depredations at an earlier hour, but the theft having been committed, the removal of the articles in most of these cases took place towards an early hour in the morning.

Mr. Justice Birdwood thought that the fixing of the exact hour was a material point in the case.

Mr. Farran said that the prosecutor himself had stated that shops did not open until about 8 o'clock. He quite admitted that the evidence as to time was not very satisfactory. Referring to the *Times of India* Calendar, he said that the sun rose that morning at 6-34, and they might, therefore, take it fairly that the occurrence took place at about sunrise. At the time the arrest took place the prosecutor was loitering. He did not use the word "loitering" in an offensive sense. The prosecutor himself stated that he was waiting for the tram-car, and he was, therefore, in that state which was usually called loitering for a legitimate purpose. He was carrying three bundles of grey piece-goods, one of which was much soiled. The prosecutor did not admit that the piece of cloth was soiled, but that was spoken to by Inspector Saunders. Under these circumstances, the accused thought it his duty to make inquiries to ascertain whether that cloth was honestly come by or not.

Mr. Justice Birdwood: What was the question put by the accused to the prosecutor?

Mr. Farran said there were different statements appearing in the evidence about it. The accused thought that his cross-examination of the complainant regarding the possession of the property had afforded him good grounds to believe that the articles were stolen property. The accused had seen some Gujrati letters on the bundle, and when he received an answer from the complainant that they were English articles, he thought that he had detected the fact that the goods were stolen, and that he had made a most important discovery. The learned counsel submitted that it was not an unnatural belief on the part of the accused, if he was under the impression, as he apparently was, that only native-made goods bore native characters. Upon the evidence the court would surely come to the conclusion that the accused really believed that he had very good grounds at least for suspecting that the goods were stolen. The magistrate in his judgment stated that these inquiries made by the police, if not prompted by some worse motives, were made by some simple curiosity, or officious inquisitiveness. The learned counsel asked if that was not assuming really the guilt of the accused? Was there any justification for the magistrate saying that the police, who were acting within the bounds of their duty, were acting out of simple curiosity or officious inquisitiveness? The magistrate also thought that the dress which the complainant had been wearing ought to have freed him from questions of that kind. That was a fact which the magistrate had found entirely without evidence. If he had taken any evidence on that point the defence was in a position to prove that the criminal classes in Bombay often traversed the streets in the garb and guise of respectable merchants. If persons wearing the garb and guise of respectable merchants were exempted from such inquiries, the number of thefts committed in fair garments would very much increase. (Laughter.) Finding that fact without evidence, was an error of law, which the magistrate had fallen into. He (Mr. Farran) was not much acquainted himself with the appearance of criminal classes in Bombay, but from his experience as Clerk of the Crown he had seen that many respectably dressed men were often placed in the dock of the High Court. He was informed that it was only a few days before that occurrence that the magistrate had complimented a policeman—

Mr. Justice Parsons: Is that in evidence?

Mr. Mehta: It was a reported case, which was cited before the magistrate.

Mr. Justice Birdwood: You had better pass on to the next point.

Mr. Farran contended that, down to that point, the action of the police was entirely justifiable. Then as to what occurred next it seemed that the accused wanted to examine the bundle, and for that purpose laid his hands upon it. The evidence showed that the bundle was snatched away from the accused by the prosecutor, who struck him a blow with more or less violence, or, in common language, assaulted him. The accused himself stated to the magistrate that he arrested the prosecutor because he struck him.

Mr. Justice Birdwood: I think this was the statement he made to Inspector Saunders.

Mr. Farran said the accused made the statement first to his jemedar, and immediately afterwards repeated the same to Inspector McCormack, and then to Inspector Saunders. The accused was not only justified in arresting the prosecutor for assaulting him as he did while he was in the performance of his duty, but also for being in possession of goods which he could not properly account for. After reading the evidence and commenting upon it at some length, the learned counsel proceeded to say that the moment the accused was satisfied that he had made a mistake as to the property being stolen, he removed the handkerchief from his arm. The prosecutor in his evidence said that when some of the people said to the accused that he was a respectable man, he untied the handkerchief and held him by the side of the collar of his coat. The magistrate stated in his judgment that the accused had no power, having once arrested, to release the complainant from confinement without the order of a magistrate. The accused was released by Mr. Saunders, whose action, the learned counsel contended, was highly proper and fully justifiable under the rules. The learned counsel argued that the word "confinement" was always understood to mean to lock up in a chowkey. When a man was locked up, the rule provided that he was never to be released without the order of a magistrate. A police inspector might, however, on his own responsibility, decline to place accused persons in confinement when the circumstances in his opinion were insufficient to justify him in doing so; and to permit them to depart, provided they were not placed in actual confinement. As regarded the charge made against the accused of using abusive language, the learned counsel submitted that it was not proved at all. The only witness who corroborated the prosecutor was Jadowjee Lukhmidas. This witness was examined on the 6th January, leave at the time being reserved to the accused to cross-examine him on a subsequent day. When the proper time came, Mr. P. M. Mehta, who defended the accused, called for the witness for cross-examination; but he had then left Bombay. Under these circumstances the learned counsel contended that the accused was entitled to have the evidence of that witness struck off the record.

Mr. Justice Birdwood said that the magistrate in his record stated Mr. Mehta wished to recall Jadowjee in order to prove that he was the son-in-law of the complainant. That fact being admitted by the counsel for the prosecution (Mr. Manockjee Registrar), Mr. Mehta stated he had no wish to recall him. The evidence of the son-in-law, the magistrate further stated, was admissible for what it was worth.

Mr. Mehta said that it was incorrectly put down by the magistrate. It was not denied what the accused had stated in his affidavit, namely, that he (Mr. Mehta) gave up the cross-examination and did not require a postponement for producing the witness because complainant's counsel (Mr. Manockjee) got up and said that finding that the witness was the son-in-law of the complainant, which fact he did not know when the witness was examined in chief, he gave up the evidence of that witness. He (Mr. Menta) did not thereupon cross-examine the witness.

Mr. Jardine said that the record of the magistrate was entirely borne out by Mr. Manockjee.

Mr. Farran said that the witness at first tried to show that he was a disinterested person, whereas it afterwards turned out that he was not only an interested person, but he was also a relation of the complainant. The learned counsel thought that the evidence of that witness ought to be rejected altogether.

Mr. Justice Birdwood did not presume that it would be contended on the other side that the evidence of the witness was worth anything, or worth much.

Mr. Farran observed that supposing the evidence of the witness was admissible, if their Lordships were to go through the evidence in the case, they would be convinced that the man was not at the place at all. It was absurd to believe that if the son-in-law of the complainant was there, he would see his father-in-law taken away to the chowkey in custody of a police sepoy and should not say a word to that sepoy. That was the only witness who corroborated the evidence of abusive language being used towards the complainant. There was no evidence whatever to show that the accused was actuated by malice in the conduct he pursued in the case. It was hardly necessary for the learned counsel to show that the circumstances justified his client in making the enquiries that he did, and that then it was really a question of law.

Mr. Justice Birdwood: Whether the man acted in good faith or not was a question of fact.

Mr. Farran submitted that the circumstances were such as to justify the accused to make inquiries, and that was a question of law.

Mr. Justice Birdwood: It is a mixed question of law and fact.

Mr. Farran then read portions of the evidence and cited a number of English and Indian cases, in the course of which he observed that their Lordships would be laying down a dangerous rule if they were to decide that, under such circumstances as these, the accused was not justified in making inquiries of a person who was carrying articles which he suspected had been stolen. Such a ruling would only paralyse the police in their action in detecting crimes. The complainant and the accused were utter strangers to each other, and the inquiries made by the latter were neither malicious nor officious. He had all along acted *bona fide* in the matter. He submitted that the magistrate had taken an incorrect view of the law of the case. The magistrate had admitted a good deal of evidence as to the character of the complainant, which ought not to have been received. He laid great stress on the fact of the man being a respectable Bhattia merchant. He evidently felt that it was very hard on a respectable merchant to be treated like that. He (the learned counsel) agreed with the magistrate so far, but at the same time he thought that the evidence ought not to have been recorded. The Evidence Act clearly stated that evidence of character of that description was inadmissible. The

evidence was wrongfully received, and it was, to say the least, unsatisfactory. The learned counsel asked their Lordships, as a court of revision, to deal with the case as a whole. If the case was considered as a whole apart from its technicality, the learned counsel ventured to say that upon the evidence before the court his client would be entitled to an absolute acquittal. The magistrate in his sentence had been logical if he had been a little too severe. For four hours the complainant had been kept under arrest, and four months' rigorous imprisonment the constable would have to suffer for that. The learned counsel could not say it was not logical, but he thought it was severe.

Mr. Jardine then addressed the Court. He cited at the outset three cases decided in the Calcutta, Bombay, and Allahabad High Courts, by way of showing that the Appellate Court could not review the judgments of the lower courts except under exceptional circumstances when there was a material irregularity or an error in law.

Mr. Justice Birdwood said that a case had been decided in the Bombay High Court, which went to show that when irrelevant evidence was admitted, or relevant evidence was rejected by the lower courts, the High Court might review their proceedings. It was urged by Mr. Farran, on behalf of his client, that irrelevant evidence had been introduced by the magistrate in the case.

The Court at this stage of the proceedings adjourned for luncheon.

After luncheon, Mr. Jardine continued his address, and in the course of his remarks said during the adjournment he had sent for a piece of cloth similar to the pieces which were being carried by the complainant when stopped by the sepoy. He (Mr. Jardine) produced the cloth and asked the court to believe that it was impossible for a person carrying three such pieces of cloth to commit an assault of such a nature as had been alleged. He then went on to point out that under section 35 of the Bombay Police Act it was laid down that there must be reasonable suspicion before a question could be put to a suspected person. The reasonable suspicion must precede the calling of a person to account for goods in his possession. In the present instance "the cart had been put before the horse," the conditions laid down in the section having been, so to speak, reversed.

Mr. Justice Parsons: It is no offence to ask a question.

Mr. Jardine: No, and it is not an offence to refuse to answer a question.

Continuing his remarks, Mr. Jardine observed that there was no ground for suspicion and the questions asked had been answered, while the sepoy had not made any charge to his superior officer against the complainant of having stolen the goods. If there had been any real grounds for believing that the goods had been stolen, was it likely that the sepoy would have dropped a charge on this score for the trumpery case of assault?

Mr. Justice Birdwood: The question is, was the arrest legal or not?

Mr. Jardine: Up to the time of the scuffle between the sepoy and the complainant there was no reasonable suspicion, the complainant having answered the questions put to him.

Mr. Jardine, continuing, pointed out that Muljee, who was admittedly a respectable witness, had stated that he told the sepoy the goods were not stolen and that then the latter commenced to "snatch" them away from him. The complainant pulled them on one side, and the sepoy, who pulled them on the other, got vexed, and caught hold of the collar of his coat. After what the complainant had stated, he (Mr. Jardine) contended that he was perfectly justified in trying to retain possession of the goods. True, complainant had no right to assault the sepoy; but, on the other hand, he had the right to use such force as to prevent the sepoy overpowering him and taking away his goods. When once the cause for "reasonable suspicion" was done away with, there existed no more right on the part of the sepoy to take away the property than there would exist for him (the learned counsel) to take away goods from any person in the public streets. In cross-examination Muljee had stated that when the scuffle was proceeding he was afraid that the goods might fall on the ground and be spoilt. He admitted that this made him angry; but he denied that he struck the sepoy a blow, although he admitted that his hand might have touched the sepoy. He (the learned counsel) asked the court to accept this evidence, and this request was justified by the description of the alleged assault given by the sepoy. He (the sepoy) talked about losing two buttons. But he would observe that buttons were not likely to come off on account of a blow from a man's fist. The most probable version of the matter was that they had come off in the scuffle between the sepoy and the complainant. The sepoy had not pressed any charge of assault in the presence of his superior officer: he had not pressed the more serious charge with regard to the stolen goods, nor did he make any further enquiries regarding them.

Mr. Justice Parsons: I thought a little further inquiry was made?

Mr. Jardine: No.

Mr. Farran: Yes. Muljee was released when his name and address were ascertained.

Mr. Jardine, proceeding, remarked that beyond ascertaining that Muljee was a shop-keeper and his address, no other inquiries were made. Muljee was allowed to take the goods away with him. If there had been any "reasonable suspicion," the police authorities would not have allowed him to do so. Referring to the treatment his client had received at the hands of the sepoy, Mr. Jardine said his arm was tied with a handkerchief, he was grasped by the collar and marched triumphantly along the streets by the sepoy, who made it his business to inform the passers-by that he had arrested a thief. This had not been contradicted, although there had been every opportunity for contradiction if it could have been given. What justification, he asked, was there for tying the complainant's arm? The thing was perfectly monstrous. Here was a most respectable shopkeeper, and yet he was not safe in the streets of Bombay from an indignity of this sort. Why could not the policeman have summoned, or taken his name, instead of subjecting him to an indignity which could not be justified? Was he such a ferocious man that it was necessary to tie him up and march him through the streets and call attention to his condition? Another important point was as to whether the arrest was a malicious arrest, or whether it was made by the sepoy in the *bona fide* execution of his duty; and in connection with this it had to be remembered that the accused's superior officer, who had not suffered annoyance, as had the accused, who "vested with a little brief authority," had perhaps thought that sufficient deference had not been paid to it, at once ordered him to be loosed. As to the evidence that Muljee would not answer the questions put to him, Mr. Jardine observed that in cases of this description it was very necessary that the court should receive police evidence with great caution. In conclusion, Mr. Jardine asked their Lordships to believe that it was not probable that if a man accused of such an assault as was said to have been committed by his client had once been released by the police would afterwards bring forward a charge which would open up the whole matter again. He submitted that their Lordships, having regard to all the circumstances, would come to the same conclusion at which the Acting Chief Presidency Magistrate had arrived, namely, that the interference with Muljee was unwarranted; that the attempt to take the cloth from him was unwarranted; that the defence of his property by Muljee was a legal defence; and that his arrest, for what they might call a technical assault, was an illegal arrest.

The Hon. Advocate-General said that he did not propose to address the court on the facts of the case, but merely as to how the various sections referred to applied to the case. He was particularly anxious that nothing should fall from their Lordships which would in any way interfere with the wholesome powers given to the police under section 35 of the Bombay Police Act, or under section 54 of the Criminal Procedure Code. He did not say that these powers should be abused, but it was important that the right which the police had to put questions to persons, when their suspicions were aroused, before proceeding to make an arrest, should be maintained. And on this point he was not inclined to agree with the view taken of the section by his learned friend Mr. Jardine. Taking into consideration the suppression of crime the police were enabled to bring about, by the use of this power, although he deprecated the abuse of it, he was certainly of the opinion that the liberty given by the section to the police should be preserved. He also submitted that it was most injudicious for the magistrate to have held, as he had done, that no person should be accosted and questioned by the police unless he was dressed as a criminal, for he did not think that the criminal classes wore any peculiar form of dress; and if they did, it was easy for them to change their coats when occasion required. It seemed to him that the case turned entirely on the question of the *bonâ fides* of the policeman in making the arrest. The arrest was made on two charges, one of which, namely, the assault, became a most prominent object when Muljee was placed before the Inspector, the other charge having been dropped owing to certain circumstances which came to the policeman's knowledge on his way to the station. The action of the policeman in arresting the complainant, if a malicious arrest, was not an action of *malice prepense*. It had not been alleged that it was a preconcerted plan made to annoy the complainant. There were, therefore, only three questions to consider: first, whether the arrest was made by the policeman in perfect good faith in the execution of his duty. If such opinion were held, he was entitled to an instant acquittal. Next, if the arrest was made in good faith according to his lights, but without due care and attention, he was guilty of an offence, but one which did not call for very severe punishment, but which would be fully condoned by departmental reprimand or punishment. The third question was, whether he made the arrest in *male fides* to gratify a spite. This was a very grave offence, and deserved heavy punishment. The learned Advocate-General concluded by asking the court for an expression of opinion regarding the remarks made by Mr. Crawley-Boevey on Inspector Saunders, and in doing so, he did not think that the court would be going out of its province.

Mr. Justice Birdwood: You would like us to go out of our way to express an opinion?

The Hon. Advocate-General: I do not think you would be going out of your way, because it is in the magistrate's judgement, and, therefore, the matter is before the court. Wrong views as to the functions of the police should not go forth. If your Lordships think the view taken in the present case is wrong, it would, I think, be desirable for them to correct it, for what is said by the court will be taken as law by the police. I think it is most desirable that an Inspector should have the power to say that a case brought before him is not one for framing a charge on, when he is of that opinion.

Mr. Farran, in reply, submitted that in deciding this matter their Lordships must rely on what he might call the independent evidence in the cause. That evidence was to the effect that inquiries respecting Muljee were made by the police, and his learned friend had taken an entirely erroneous view of section 35, when he said that under it the police had no right to make enquiries. That section showed that if a person failed to give a satisfactory account of his possession of an article or articles, he was liable to a penalty not exceeding Rs. 100, or imprisonment. Perhaps, it was not so much the section itself that gave the power of making enquiries: but that power flowed necessarily from the provisions of that section Therefore, the questions being legitimate, it appeared to him that the further action was also legitimate. At any rate, he submitted that the sepoy attempted to get possession of the cloth after "due care and attention;" and if, under these circumstances, he was assaulted, then he submitted with considerable confidence that the sepoy was justified in arresting the person who so assaulted him. Further, he contended that the arrest was not malicious; for, as soon as the sepoy was convinced that Muljee was not a shady character, but a respectable shopkeeper, he abandoned the precautions he had taken up to that time to prevent his escape from custody.

Their Lordships then intimated that they would deliver their decision in the matter on Thursday.

BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY.

At the monthly meeting of the Bombay Branch of the Royal Asiatic Society held on the 15th inst. in the library, under the presidency of the Hon. Raymond West, Mon. Emile Senart read an interesting paper on the new Asoka inscriptions. Among those present were H. E. Lord Reay, his Grace Dr. G. Porter, Archbishop of Bombay, Colonel Sparks, Dr. Peterson, the Hon. M. W. Barve, Brigadier-General Adam, Messrs. Crawley Boevey, W. E. Hart, Professor Forrest, Dr. Gerson Da Cunha, Professor Macmillan, Mr. Justice Jardine, Mr. Justice Birdwood, Mr. Justice Parsons, Mr. F. M. De Canto, the Portuguese Consul, Mr. N. R. Cama, Mr. Y. N. Kelkar, Dr. (Miss) Edith Pechey, Dr. W. E. Cate, Dr. Steel, Mr. Javerilal U. Yajnik, and others.

Mon. Emile Senart said:—

Mr. President: Your Excellency,—In asking me to address you to-day, your zealous and learned Secretary has led me into a great temptation and also into a serious embarrassment. It is a great honour to be in this way more closely connected with your renowned society, to raise my voice in this house, full as it is of the recollections and teachings of so many eminent Orientalists, who have done so much and are doing so much for Indian letters. It is for me a real gratification, too, to represent for a moment among you our French school of Indianists, to which I know that many of you render full justice—to enter with you that communion of work which is in my eyes one of the most precious advantages I can draw from my trip in your bright country. The temptation was too strong, and I have succumbed. The embarrassment was not less, and I greatly fear here again to succumb. The continuous distraction, the whirl of the voyage, if I may so speak, are a bad preparation for the effort demanded by our austere studies; they suit but ill with rapid improvisation. Yet a philologist, if he has the right to travel, has no right to make, much less to submit to such an audience, travelling philology. It seemed to me that the safest plan would be to talk with you for a little in all simplicity on a subject which is directly connected with my visit to India. So, some notes, if you please, of a philologist's holiday. They are not, I know, very well put together; but I rely on your indulgence. I shall have at least the advantage of dealing with one or two monuments, precious for their antiquity and for their author, which I have been the first, and so far the only one, among Indianists to look at with my own eyes. By a singular reversal of parts I shall for once bring to Bombay archæological news from India, owls to Athens. There is no need here to recall to your memory the great interest attaching to the various and numerous inscriptions which bear the name of Piyadasi, the Asoka of Southern Buddhists, grandson of Chandragupta. In the dark night which covers the distant past of this country, they appear suddenly, a light as bright as it is unexpected. They are the most ancient dated monuments of India, the most ancient dated witnesses of its religious life and of the progress of Buddhism. The feelings and ideas which they express, the measures which they sanction, do singular honour to their author. You know all these things. But that is not all. Written in dialects more or less popular, which differ in orthography and in many details from everything sanctioned by written literature, they appear to stand near enough to the first practical application of writing in India, to render the slightest palæographic peculiarities observed in them a matter of considerable importance. Elsewhere I have tried to show that the chronographical data which they yield, if they are carefully examined and properly valued, may and ought to serve as a starting point for new views on the history of the learned tongues of India, Sanskrit, Mixed Sanskrit and the Prakrits, on the sequence and chronology of their development. In this field, then, every new fact may turn out to have an unexpected importance, and each new discovery merits, even outside the narrow circle of professional scholars, the attention and the sympathy of every one interested in the antiquity and history of India. You recollect that the principal set of the edicts of Asoka, those which can be embraced under the name of the Fourteen Edicts, were known until recently in five versions, more or less complete, and in better or worse preservation. Four written in the Indo-Pali character, to use the English terminology, at Girnar, at Dhauli, at Jaugada, at Khalsi (the last discovered); one in the Aramean character, which you call Indo-Aryan, at Shahbaz Garhi, in the Yusufzai country, some miles to the north of Hoti Murdan. It is about three years, I suppose, since we learned from General Cunningham of the existence of another series, written like this last, in the Indo-Aryan character, at Manserah, on the road leading to Cashmere by Abbottabad. Some photographs made for General Cunningham, and others taken at the instance of my countryman and friend, J. Darmesteter, all of them on too small a scale, to serve as a basis for a real study, and which, moreover, have none of them been published, have been until now our only source of information. You can easily imagine that Manserah was among the intended stages of my journey when I started for India. I was on the way there when I heard at Mathura from Dr. J. Burgess that at Shahbaz Garhi, quite close to the inscriptions previously known, a new one had just been discovered by Captain Deane, Assistant Commissioner at Hoti Murdan. And from the rubbing which he showed me I saw that we had here the twelfth edict, the only one of the fourteen which had been missing at Shahbaz Garhi. I did not need this new attraction to feel a keen desire of going to see with my own eyes those rocks, so interesting for their peculiar orthography, so attractive to me for the very imperfection of the hitherto available material, an imperfection largely due to the fact that the inscription has suffered so much from the ravages of time, and that the uneven and rugged surfaces on which it is engraved present difficulties in part insurmountable to every means of mechanical reproduction. Among the versions written in Indo-Pali characters, that of Girnar, being so carefully executed and so remarkably preserved, undoubtedly holds the first rank. I could not pass so near this famous place without devoting to it at least a few hours. However perfect fac similes may be, it must be a rare occurrence when they are clear and reliable enough to be a complete substitute for direct inspection. Manserah, Shahbaz Garhi, Girnar then, these were my three stages. I do not invite you to follow me there step by step,

I could not, without being wearisome, enter on technical details of interpretation. These will come more usefully on another occasion, when the documents, which I know have been procured by the Archæological Survey, will be available to supplement those which my hurried visit enabled me to bring back with me. I wish only to take advantage of the opportunity which has been so obligingly offered to give you, and through you to give at once to my fellow Orientalists, some precise information on the new facts, noting briefly at the same time the interest which they possess. It is then of Manserah and Shahbaz Garhi in particular that I propose to speak. When you leave the dak bungalow at Manserah, a lane which goes round the village to the north crosses the river, and following among fallen rocks the deep bed which the torrent has cut for itself leads you into a kind of vast circle, the floor of which forms a stately plain, and which is surrounded on all sides by hills of various sizes overlooked towards the north by the snowy mountains of Khagan and Cashmere. To the left, some hundred yards from the stream, is a low hill, completely covered with a confused mass of boulders, large and small. It is on two of these boulders that the inscriptions are written. The first is engraved on one face only, which is turned to the east, and contains the first eight edicts. It would seem to have come out from its original position; the lines are inclined, and the lowest of them come so near the ground, and on the right side are so encumbered with fragments of rock, as not to be easily read, and to render it difficult to obtain satisfactory rubbings. The second block, which is perhaps thirty yards distant, is engraved on two faces, to the north-east and to the south-east. The first contains edicts nine to eleven, and the other the twelfth. Both faces are engraved at a higher level from the ground than the other stone, and the letters are larger. Unfortunately, this second block, especially on its north-east face, has been so much damaged by time, that I very much fear that no rubbing will give an adequate representation of it. Both rocks, especially the first, consist of a kind of spotty conglomerate, far from homogeneous in appearance, and the letters are not deeply cut. Under these circumstances the task of reading is not an easy one, and it is only by dint of patience, and taking careful advantage of the play of light and shade at different times of the day, that it will be possible to extract from the stones, particularly from the second block, all the information they have to give. As to the first, being more even, it is apt to yield clearer rubbings, while its greyish and variegated colour makes reading more trying and difficult. To sum up. Manserah gives us a new version, more or less complete, of the first twelve edicts. I have little doubt that the two last had also been engraved here, but they do not seem now to be known of as in existence by the inhabitants; and the hurried search I was able to undertake on the spot led to no result. It may be that the inscription has fallen down with the face against the ground, or that it is more or less entirely buried. It is precisely such a circumstance which has delayed so long the discovery of the twelfth edict at Shahbaz Garhi. Only some weeks ago did Captain Deane, while stepping once more through that celebrated place, which had been before searched over by experienced and devoted archæologists, notice a few characters on a stone just emerging from the soil. In clearing away the surrounding ground, he brought to light an entire and well preserved inscription, which is nothing else, as I told you before, than the previously missing version of the twelfth edict. This boulder lies just at the foot of the hill on the steep slope of which, about forty yards higher up, the other boulder stands in marvellous equilibrium, which contains on its two faces, on one side the first seven edicts, on the other the thirteenth and the fourteenth, both faces, especially the second, much corroded by time, but still capable of yielding to a patient study, conducted with perseverance and sufficient leisure, many corrections to the current version. That such corrections could be obtained we knew already by the text of the first edict as it has been restored by your eminent colleague, Pandit Bhagwanlal Indraji. I have been able myself to ascertain it again in the case of a good number of passages. I should not like, gentlemen, to fatigue you, and to be more of a pedant than there is occasion for. If it is the duty of a philologist to approach religiously even the most minute details, he may without impiety choose fit hours for his worship. Do not fear that I should go into tedious detail. I do not need to insist upon the interest of those good tidings. Of course, these are texts which are known to us in other versions, and the general sense of which is sufficiently established. But it is precisely the version the least well preserved and the least settled which is in this way controlled and completed by a parallel version, which will enable us to fill up more than one gap and clear up more than one doubt. I cannot refrain from adding that these inscriptions of the North-West, if some conjectures which I have elsewhere expressed prove true, as I hope they may, would be, as it were, precious and unique relics of that conquest of North India by the Persians of which we know so little. It is, perhaps, through the influence of the Persian chancellery that the alphabet in which they are written has found its way to India; while, on the other hand, it may be from some tradition of the Persian kings that an Emperor of India borrowed the idea of engraving long memorials on the rock. Be that as it may, the scarcity of inscriptions written in this Aramean character insures some importance even to palæographic niceties. Let me give you an instance. I had been led to consider a certain modification of the letter *m* at Shahbaz Garhi as a simple graphic duplicate of the sound *ma*. The comparison of the Manserah text has persuaded me that the sign really stands for *mu*. Passing to more general considerations, the two versions of Manserah and Shahbaz Garhi are geographically so near each other, and on the whole so exactly alike, that there can be no question here of looking for different dialects. The few points in which they differ are all the more significant, and I had the satisfaction, in comparing the two, of lighting on certain facts of a kind to confirm two opinions which I have attempted to establish: the one, that the orthography of those inscriptions is in certain respects of a learned character, aiming not so much at reproducing the actual pronounciation as at approaching the etymological form of the word; the other, that even in the versions where, as here in the North-West, the orthography reflects a dialect different from the official Magadhi of Asoka, it undergoes and reveals the influence of that dialect in some isolated cases. Any additional facts of the kind, in a matter so delicate, cannot fail to be welcome. Short as has been my description, there are other points which may have struck you. For one, the special importance which would appear to have attached in both cases to the twelfth edict. At Shahbaz Garhi this edict is engraved on a separate stone, that just discovered by Captain Deane. At Manserah it has the face of a stone to itself. In both it is engraved with greater care than the rest of the long context. You will permit me to put before you the terms of this edict, the sense of which can, in my opinion, be conclusively settled. "King Piyadasi, beloved of the gods, honours all the sects, whether ascetics or householders. He honours them with alms and with honours of various kinds. But the king, and with honours of various kinds. But the king, beloved of the gods, does not so much esteem alms and worship as he desires the increase of their common essence. This progress implies without doubt many diversities. But for all sects it has a common source, which is caution in language, that is to say that one should not exalt his own sect by speaking evil of the others, that one should not depreciate them without reason, that one should, on the contrary, render on all occasions to other sects the honours due. By doing so one will work for the advance of his own sect, and at the same time be of use to the others. By doing otherwise each one will injure his own sect, and at the same time injure the others. He who exalts his own sect by depreciating all others, does so of course out of regard for his own, with the intention of glorifying it. Well, by so doing he only, on the contrary, strikes a severe blow at his own sect. Therefore concord alone is good, so that all should listen, and like to listen, to the beliefs of each other. This is, indeed, the wish of the king, beloved of the gods, that all the sects be learned, and profess pure doctrines. Let all, whatever be their faith, be well assured that the king, beloved of the gods, esteems alms and worship less than he desires to see the increase of the common essence and mutual respect of all sects. To this end the officers in charge of religion, the officers charged with the oversight of the females, and other officials are directed to work. The fruit of their labours is the good of all the sects and the glory of religion." We are accustomed by more than one example to see the ancient sovereigns of India show equal favour to different communions and distribute their gifts impartially among contending creeds. It is not always easy to make out the real motive, breadth of mind, a mystical blending of religions, superstitious fear, or matter of policy, which has inspired them. It is certain that the words I have just translated are unique in the past of India; and I know of nothing which does it more honour than this edict of toleration, so clear, so firm, and yet so simple. May we not add that the place of honour which the king secured for it, while it shows the very special importance he attached to this one of his proclamations, must increase our respect and admiration for him. But we are here met by a small problem which I only wish to touch in passing. This very twelfth edict is wanting in two of the known versions of the series, at Dhauli and Jaugada: it is missing along with the eleventh and the thirteenth. No one, so far as I know, has suggested a reason for this. As regards the thirteenth edict the reason appears to me to be clear. That edict chiefly tells us how the conquest of Orissa (the country of Dhauli and Jaugada), and the horrors then committed, were for Asoka the beginning of his conversion to the Buddhistic doctrines of mercy and peace. We can easily understand why he should not have felt bound himself to perpetuate such a recollection in the very country which, as he tells us, had so heavily felt the weight of his arms. The eleventh edict may have been left out, as soon as omissions were practised, as being of secondary importance. In fact, it is only an amplification, in other terms, of moral advice, those which cannot escape us except by the ravages of time, but which have already so cruelly suffered. I esteem myself fortunate to have had the opportunity of suggesting this wish before one of the highest and most enlightened representatives of power in India. I feel certain that Asoka can rely on the zeal of his successor here. I cannot stop, gentlemen, without thanking you once more for your hospitality. This day, almost the last of my stay in India, will crown my recollections. I fear it has been the extreme limit of hospitality to tolerate with so much patience my poor English and my barbarous accent. But, gentlemen, you have only yourselves to blame, if, in your company, it is easy to forget so readily that one is a foreigner.

Dr. Peterson, the secretary of the society, thought that it would be a pity if the vote of thanks which his Excellency had kindly undertaken to move on their behalf were to come immediately at the close of the reading of this very interesting paper. Yet to follow M. Senart on inscriptions would be a task which any man would be justified in declining. Fortunately there was one circumstance in connection with the proceedings of that day which the secretary of the association would almost be wrong if he did not dwell on. Mon. Senart had referred to the fact that the honour of first deciphering the inscriptions of Asoka, which for ten centuries were a puzzlement and despair to the learned of all communities, fell to James Prinsep. His was one of the names which Englishmen brought forward when they were challenged, as they sometimes were rather rudely, to show what England had done in the way of oriental research. Like that of Colebrooke, in another sphere, the name of Prinsep stood second to none. It was just fifty years almost to a day, or to speak by the book on the 7th March, 1838, that James Prinsep communicated to the parent society at Calcutta the first translation of the Girnar inscription. He had not seen the rock. He was in the position their friend and guest was in before he left Paris. And the materials which Prinsep had to work on were reduced copies of the *fac simile* of the inscription made by Dr. Wilson, the president of the Bombay Literary Society. These copies he found were not sufficiently well done, and he applied to Dr. Wilson for the *fac simile* itself. With obliging frankness, this was at once sent to him by a sure hand to Calcutta by sea. Dr. Wilson, the president of the society in 1832, they would remember as the veteran missionary of 1875. As direct representatives of the defunct Literary Society they could congratulate themselves on hearing from their eminent guest the first communication, in any detail, of the latest discovery of these inscriptions, as Mon. Senart was, he almost thought, to be congratulated on the fortune that led him to find a fitting place, as this remark, it is because the fact would be rather favourable to the speculations I have had occasion to submit elsewhere with regard to the language of the inscriptions. It furnishes a good explanation of two peculiarities which, I hope, I have made clear—one, the use of Magadhi, the dialect of the royal capital, in places where it was in no way the language of the country: the other, the use, specially in the western sets, at Shahbaz Garhi, Manserah and Girnar, of a half learned system of orthography which could not but have disconcerted the ordinary reader. I have only one more remark to offer. I You will permit me to put before you the terms of this edict, the sense of which can, in my opinion, be conclusively settled. "King Piyadasi, beloved of the gods, honours all the sects, whether ascetics or householders. He honours them with alms and with honours of various kinds. But the king, and with honours of various kinds. But the king, beloved of the gods, does not so much esteem alms and beloved of the gods, does not so much esteem alms and worship as he desires the increase of their common essence. This progress implies without doubt many diversities. But for all sects it has a common source, which is caution in language, that is to say that one should not exalt his own sect by speaking evil of the others, that one should not depreciate them without reason, that one should, on the contrary, render on all occasions to other sects the honours due. By doing so one will work for the advance of his own sect, and at the same time be of use to the others. By doing otherwise each one will injure his own sect, and at the same time injure the others. He who exalts his own sect by depreciating all others, does so of course out of regard for his own, with the intention of glorifying it. Well, by so doing he only, on the contrary, strikes a severe blow at his own sect. Therefore concord alone is good, so that all should listen, and like to listen, to the beliefs of each other. This is, indeed, the wish of the king, beloved of the gods, that all the sects be learned, and profess pure doctrines. Let all, whatever be their faith, be well assured that the king, beloved of the gods, esteems alms and worship less than he desires to see the increase of the common essence and mutual respect of all sects. To this end the officers in charge of religion, the officers charged with the oversight of the females, and other officials are directed to work. The fruit of their labours is the good of all the sects and the glory of religion." We are accustomed by more than one example to see the ancient sovereigns of India show equal favour to different communions and distribute their gifts impartially among contending creeds. It is not always easy to make out the real motive, breadth of mind, a mystical blending of religions, superstitious fear, or matter of policy, which has inspired them. It is certain that the words I have just translated are unique in the past of India; and I know of nothing which does it more honour than this edict of toleration, so clear, so firm, and yet so simple. May we not add that the place of honour which the king secured for it, while it shows the very special importance he attached to this one of his proclamations, must increase our respect and admiration for him. But we are here met by a small problem which I only wish to touch in passing. This very twelfth edict is wanting in two of the known versions of the series, at Dhauli and Jaugada: it is missing along with the eleventh and the thirteenth. No one, so far as I know, has suggested a reason for this. As regards the thirteenth edict the reason appears to me to be clear. That edict chiefly tells us how the conquest of Orissa (the country of Dhauli and Jaugada), and the horrors then committed, were for Asoka the beginning of his conversion to the Buddhistic doctrines of mercy and peace. We can easily understand why he should not have felt bound himself to perpetuate such a recollection in the very country which, as he tells us, had so heavily felt the weight of his arms. The eleventh edict may have been left out, as soon as omissions were practised, as being of secondary importance. In fact, it is only an amplification, in other terms, of moral advice, those which cannot escape us except by the ravages of time, but which have already so cruelly suffered. I esteem myself fortunate to have had the opportunity of suggesting this wish before one of the highest and most enlightened representatives of power in India. I feel certain that Asoka can rely on the zeal of his successor here. I cannot stop, gentlemen, without thanking you once more for your hospitality. This day, almost the last of my stay in India, will crown my recollections. I fear it has been the extreme limit of hospitality to tolerate with so much patience my poor English and my barbarous accent. But, gentlemen, you have only yourselves to blame, if, in your company, it is easy to forget so readily that one is a foreigner.

Dr. Peterson, the secretary of the society, thought that it would be a pity if the vote of thanks which his Excellency had kindly undertaken to move on their behalf were to come immediately at the close of the reading of this very interesting paper. Yet to follow M. Senart on inscriptions would be a task which any man would be justified in declining. Fortunately there was one circumstance in connection with the proceedings of that day which the secretary of the association would almost be wrong if he did not dwell on. Mon. Senart had referred to the fact that the honour of first deciphering the inscriptions of Asoka, which for ten centuries were a puzzlement and despair to the learned of all communities, fell to James Prinsep. His was one of the names which Englishmen brought forward when they were challenged, as they sometimes were rather rudely, to show what England had done in the way of oriental research. Like that of Colebrooke, in another sphere, the name of Prinsep stood second to none. It was just fifty years almost to a day, or to speak by the book on the 7th March, 1838, that James Prinsep communicated to the parent society at Calcutta the first translation of the Girnar inscription. He had not seen the rock. He was in the position their friend and guest was in before he left Paris. And the materials which Prinsep had to work on were reduced copies of the *fac simile* of the inscription made by Dr. Wilson, the president of the Bombay Literary Society. These copies he found were not sufficiently well done, and he applied to Dr. Wilson for the *fac simile* itself. With obliging frankness, this was at once sent to him by a sure hand to Calcutta by sea. Dr. Wilson, the president of the society in 1832, they would remember as the veteran missionary of 1875. As direct representatives of the defunct Literary Society they could congratulate themselves on hearing from their eminent guest the first communication, in any detail, of the latest discovery of these inscriptions, as Mon. Senart was, he almost thought, to be congratulated on the fortune that led him to find a fitting place, as this remark, it is because the fact would be rather favourable to the speculations I have had occasion to submit elsewhere with regard to the language of the inscriptions. It furnishes a good explanation of two peculiarities which, I hope, I have made clear—one, the use of Magadhi, the dialect of the royal capital, in places where it was in no way the language of the country: the other, the use, specially in the western sets, at Shahbaz Garhi, Manserah and Girnar, of a half learned system of orthography which could not but have disconcerted the ordinary reader. I have only one more remark to offer. I have told you of the places where the fourteen edicts have been discovered, at Dhauli and Jaugada in the south of Orissa, at Khalsi, at the entrance of the hilly region of the Western Himalaya, at Shahbaz Garhi and at Manserah, towards Cashmere and Cabul, at Girnar, not far from the sea, and towards the western extremity of India. We must add Sopara, not very far from here, where Pandit Bhagwanlal Indraji and Mr. Campbell have discovered the traces of another series. It may well be that we have so far only a few of the inscriptions set up by Piyadasi. We may still hope for more than one unexpected discovery. For the present does it not seem as if the series of fourteen edicts were especially meant by the king to mark out his frontiers? It was at all events a noble and honourable way of denoting the doors of his empire. Does he not devote several passages of his memorials to telling us of what he has done or tried to do even beyond those limits, of his charity, and attempts of conversion pushed on one side as far as Ceylon, and on the other side up to the distant kingdoms of the Greeks, in the countries of Antiochus, Ptolemy, Alexander and Magas? As far as our western world is concerned, these efforts cannot have penetrated very far. That is no reason why we should refuse our sympathy to this old eastern king who cared for our distant west, in a confused way perhaps, but with good will and charity. The West has paid its debt to him, thanks to the genius of Prinsep, by restoring to him the glory of his forgotten works; and it is even now with feelings of sympathy, mixed with scientific curiosity, that we renew to-day, and that others will renew after us, these pilgrimages to the monuments of Asoka, and that, now conscious of the tie which binds India to our West, we greet in them the earliest Indian witness to relations of peace and good-will between the most widely separated members of our Aryan family. The more precious the witness is, the more it behoves us to preserve it intact. I cannot say it to this end everything which is possible and desirable has been done. At Girnar the rock which bears along with the edicts of Asoka inscriptions of Rudradaman and Skandagupta, has been enclosed within a light construction which will preserve it from the injury of time and of men. I am told that the honour of this measure belongs to the late Dewan. Could not some similar protection be given to the inscriptions of the North-West? If such care had been bestowed from the beginning, I believe that almost the whole text would be perfectly clear at Shahbaz Garhi. I confess that I should go further and see no inconvenience, if specimens, as for example the twelfth edict at Shahbaz Garhi, in the case of which the operation would be an easy one, were removed to some museum in India, whose chief ornament they would be. At all events it would be possible, as it is very desirable, to take most careful casts of these monuments. Distributed among several of the principal centres of India, and perhaps also of Europe, they would be safe from all hazards of injury, and be an object of study of the highest interest. An unhappy fate seems to hang over our too rare inscriptions in Indo-Aryan character. Very few have been published, as, for example, that of Sûe Vihar by Mr. Hörnle, in a satisfactory and definitive way; and for a great number of them we do not even know—at least I have not been able to discover—where they are or are. That is an additional reason why we should jealously protect those which cannot escape us except by the ravages of time, but which have already so cruelly suffered. I esteem myself fortunate to have had the opportunity of suggesting this wish before one of the highest and most enlightened representatives of power in India. I feel certain that Asoka can rely on the zeal of his successor here. I cannot stop, gentlemen, without thanking you once more for your hospitality. This day, almost the last of my stay in India, will crown my recollections. I fear it has been the extreme limit of hospitality to tolerate with so much patience my poor English and my barbarous accent. But, gentlemen, you have only yourselves to blame, if, in your company, it is easy to forget so readily that one is a foreigner.

Dr. Peterson, the secretary of the society, thought that it would be a pity if the vote of thanks which his Excellency had kindly undertaken to move on their behalf were to come immediately at the close of the reading of this very interesting paper. Yet to follow M. Senart on inscriptions would be a task which any man would be justified in declining. Fortunately there was one circumstance in connection with the proceedings of that day which the secretary of the association would almost be wrong if he did not dwell on. Mon. Senart had referred to the fact that the honour of first deciphering the inscriptions of Asoka, which for ten centuries were a puzzlement and despair to the learned of all communities, fell to James Prinsep. His was one of the names which Englishmen brought forward when they were challenged, as they sometimes were rather rudely, to show what England had done in the way of oriental research. Like that of Colebrooke, in another sphere, the name of Prinsep stood second to none. It was just fifty years almost to a day, or to speak by the book on the 7th March, 1838, that James Prinsep communicated to the parent society at Calcutta the first translation of the Girnar inscription. He had not seen the rock. He was in the position their friend and guest was in before he left Paris. And the materials which Prinsep had to work on were reduced copies of the *fac simile* of the inscription made by Dr. Wilson, the president of the Bombay Literary Society. These copies he found were not sufficiently well done, and he applied to Dr. Wilson for the *fac simile* itself. With obliging frankness, this was at once sent to him by a sure hand to Calcutta by sea. Dr. Wilson, the president of the society in 1832, they would remember as the veteran missionary of 1875. As direct representatives of the defunct Literary Society they could congratulate themselves on hearing from their eminent guest the first communication, in any detail, of the latest discovery of these inscriptions, as Mon. Senart was, he almost thought, to be congratulated on the fortune that led him to find a fitting place, as

well as the fitting reception, he in any case was sure of beforehand, for the revelation he had made. (Applause.)

Mr. Javerilal U. Yajnik said that if the history of India was ever to be written, it would have to be written from such records as the inscriptions from Asoka. The subject was one of great importance to the people of India, whose thanks were due to such eminent scholars as Mon. Senart. (Applause.)

H.E. Lord Reay, in proposing a vote of thanks to the lecturer, said that he thought he would simply be expressing the feeling which pervaded the meeting, when he said that their best thanks were due to the eminent guest and visitor, Mon. Senart, for the eloquent essay which he had delivered. He had no doubt that if they had had only had the time to digest its contents the lips of many eminent persons in the room would be unsealed, and a very interesting discussion would have taken place. Now the paper would give rise to a discussion after Mon. Senart had left these shores, and the secretary of the association would take care that Mon. Senart should receive those appreciative remarks. Mon. Senart had told them of the difficulties which attended philological research. He spoke not only of those of a mental nature, but the physical difficulties were evidently not to be underrated. After all the acrobatic exercises Mon. Senart had told them he had to perform, he thought that they were to be congratulated in having him now in their midst. (Laughter.) He fully accepted the responsibilities which Mon. Senart had said rested on the Government to do all that was in their power to accomplish in India the task recognised in England, namely, the duty of those in power to preserve those great treasures which were sealed or unrevealed. The Preservation of Ancient Monuments Act of England had not yet been introduced into India, but he did not think he was betraying a secret when he said that official documents would show that he had called the attention of those whose duty it would be to introduce a bill of this kind to the inestimable benefit which would result therefrom to classical studies. (Applause.) Apart from what it would do for our own students of whom there was, he was happy to say, an ever increasing number, both European and native, in this country, they would probably have a larger number of visitors like Mon. Senart and their recent visitor, Professor Darmesteter, bent on research, whose visits always were the luminous points of the cold season. (Hear, hear.) He only hoped that Mon. Senart would encourage others of his friends to come and pursue those studies to which he had shown the way, and he assured those gentlemen, who had been called travelling philologists, of a hearty welcome in India. One of the most important things touched in the essay just read was the edict of toleration, and, as Mon. Senart had said, that edict of toleration was only the forerunner of the legislation which now prevailed all over India. He again thanked the lecturer for the essay which he had read to them, and he was quite sure that when Mon. Senart returned to Paris, that in his capacity of the youngest member of the Institut de France he would not forget them, but that he would be tempted to lay out to the best advantage the materials he had so diligently collected in a more elaborate treatise the receipt of which, he was assured, would be most welcome to his friends in this presidency. (Applause.)

The Hon'ble **Raymond West**, who presided, in the name of the society begged to join in the felicitations of his Excellency for the remarkable success which had attended Mon. Senart on the journey he had just accomplished in India. The inscriptions of Asoka had an undying interest for everyone concerned, not only in the development of Indian history, but the evolution of human thought and morality. One of the most interesting instances in the history of the human mind was the discovery of these inscriptions and the very high development of the moral sense to which they lead us at a very early period. If they looked to another country they could not but be struck by the remarkable contrast between the spirit of the inscriptions, so far as they had been deciphered in Egypt, and the edicts of Asoka. The sonnet of Shelley's, though not a reproduction of anything in actual existence, quite reproduced the spirit of many of the Egyptian inscriptions. This spirit so remarkable in the Egyptian inscriptions was entirely wanting in those of Asoka, which breathed a spirit of the most beautiful charity and beneficence. The wide distribution of these inscriptions towards the borders had apparently indicated to some the existence of a great empire extending over the regions which was ruled by the single Emperor of Asoka or his descendants, but with his slight antiquarian knowledge he was never quite satisfied that it was so. His own impression was that the traditional words of Asoka, which from their very nature must have made a deep impression on the minds of the people of that early period, and which breathed a spirit of what in our arrogance we might call a Christian spirit of charity and kindliness, were very likely preserved by pilgrims and devotees, who made of these inscriptions in various parts of India, similarly as inscriptions were made by pilgrims in Europe and Northern Africa. Some of the inscriptions in the latter country were found to be drawn from the Scriptures, many, in fact, being passages from the New Testament. To one unacquainted with Christian history our Saviour would appear as a king and not a spiritual leader, who ruled over all these regions, and a proof of this would be found in these inscriptions, which were extracted from his writings. On this point, however, he was still in that hesitating balance state of mind which Stuart Mill had said, constitutes true philosophy and the true philosopher. He would look forward with very great interest for a small parcel from Mon. Senart, which would contain a paper expressing more fully his reflexions on these subjects. He concluded by again thanking the eminent scholar for the paper he had read and expressing the deep obligation the society was under to the School of French Oriental Scholars. (Applause.)

The meeting was then dissolved.

The Services.

BOMBAY ARMY ORDERS.

Adjt.-Genl.'s Office, Head-Quarters, Poona, March 16th, 1888.

The C-in-C is pleased to make the following appointments :—

REMARKS.

Calcutta, 17th March, 1888.

The following transactions were reported :—

In Government Securities—
4 per cents. at Rs. 98-11, and small pieces at Rs. 98-12 and Rs. 98-14.
4½ per cents. of 1878-79, at Rs. 105.

In Shares—
Bank of Bengal at Rs. 887½.
Bengal Baragunda A shares at Rs. 14¾.
Budge-Budge Jute Co. at Rs. 87.
Chitpore Hydrem ulic Press at Rs. 80.
Fort Gloster Jute Co. at Rs. 53 and Rs. 53½.
Howrah Mills Co. at Rs. 105 for cash, and at Rs. 108 and Rs. 109 for delivery in three months.
Seebpore Jute Co. at Rs. 77.
East India Tea Co. at Rs. 35.
Gielle Tea Co. at Rs. 58 for cash, and at Rs. 59 for delivery in two months.

COMMERCIAL AFFAIRS IN BENGAL.

Banks, &c.—The amount passed through the Calcutta Clearing House for the week ended 10th March was Rs. 1,07,07,851 against Rs. 96,39,187 for the same period of 1887 and Rs. 83,27,570 for 1886.

The following are the figures of the Reserve Treasuries :—

	21st Feb. 1888.	28th Feb. 1888.	6th Mar. 1888.	13th Mar. 1888.
Calcutta	57,97,209	19,53,656	9,50,810	21,28,613
Madras	22,99,343	14,21,660	19,47,222	18,57,322
Bombay	72,51,297	1,05,71,525	99,00,418	81,25,474
Total	1,53,18,448	1,39,46,841	1,22,98,450	1,21,41,409

The usual weekly statement of the Bank of Bengal, made up to the 13th March, shows that the public and other deposits were Rs. 3,20,80,277 and the cash and currency notes Rs. 20,611,910, the percentage being 37·7. At their weekly meeting on Thursday, the directors made no change in the Bank rate, which remains at 7 per cent. Bank shares have been dealt in at 887½.

Chartered Mercantile Bank of India and China.—An extraordinary general meeting of the shareholders was held at one o'clock on 21st February, at the Banking-house of the Corporation, 65, Old Broad-street, for the purpose of confirming two resolutions passed at a previous meeting, held October 18th. The first resolution authorised the Directors "to apply for and accept any renewed or supplemental charter, or any extension of the time for which the existing charter of the Corporation is granted." The second resolution made a slight alteration in the provisions of the deed of settlement with regard to the notice required for calling general meetings.

Mr. A. Fraser occupied the chair, and without making any observations, moved the adoption of the resolutions. This was seconded by Mr. Daniel and passed ; and the meeting terminated.

Government 4 per cent. Paper has marked a substantial advance this week ; opening on Monday at 98⅜, it closed at 98½, advancing on Tuesday to 98¾, and on Wednesday to 99 1-16. On Thursday it receded to 98⅝ and 98 15-16 at which it remained on Friday ; and to-day the rate is weaker.

Four and a half per cents. of 1878-79 have been done at 104⅛ and 105. Four and a half per cent. Port Trust of 1881 at 99¾.

Exchange has steadily declined. On Monday the rate was 1s. 4⅞d. Tuesday 1s. 4 19-32d., Thursday 1s. 4 9-16d. and Friday 1s. 4 15-32d. ; to-day the rate is 1s. 4¾d. for bank bills on demand.

Mills, &c.—In sympathy with a somewhat weaker feeling for spot heavy jute fabrics, jute mill shares are a little easier. Sales are reported of Budge Budge 87, 88 ; Fort Gloster 55, 54½ ; Howrah Mills 107, 106 105, 106 ; Seebpore 78, 77.

Pressing Shares are more in demand. Sales are reported of Camperdown 106, 108xd ; Chitpore 75,78, 82 ; Watsons 85,87, 88 ; Riverside 55 ; Calcutta Hydraulic 95 ; Canal 80 ; Nasmyth 80.

Cotton Mills.—Sales are reported of Bengal Mills 1575 ; Bowreah 74, 73. This company is said to have made a good half-year, and will take a large sum to Reserve, besides paying 2½ per cent dividend.

At the half-yearly general meeting of the Cawnpore Woollen Mills Company, Limited, held at Cawnpore, on Saturday, the 25th ultimo, the shareholders placed on record "their high appreciation of Mr. McRobert's services towards the company since he has been their manager," and resolved that "as a mark of their esteem a bonus of Rs. 1,000 be presented to him for the past half-year." I believe that both the compliment and bonus have been well earned.

Miscellaneous.—Sales are also reported of Egerton Woollen Mills 90 ; Murree Brewery 155 ; Bengal Ice 83.

The Bally Paper Mills have declared a dividend of 5 per cent. or 10 shillings per share.

Deoghur Mining Co.—A call of 8 annas per share is payable to-day.

There seems to be a feeling at home that there will be considerable fall in the price of copper ; there also seems to be an impression in some quarters that the next mining "boom" will be in Indian gold mine shares.

Sales are reported of Equitable Coal 200, 202½, 220 ; Alipore 105, 103 ; Bengal Coal 1560 ; New Beerbhoom 116, 117 ; Baragunda A shares 14⅜ ; B shares 8.

Railways, &c.—Tarkessur Railway.—The traffic returns for the week ended 3rd March were Rs. 5,965 against Rs. 5,562 last year, and the increase so far is Rs. 823.

Darjeeling Himalayan Railway.—The traffic receipts for the same period were Rs. 9,384 against Rs. 6,485 last year, and the increase thus far is Rs. 8,878.

Deoghur Railway Company.—The report of this little company for the second half of 1887 shows that the total receipts were Rs. 12,223 against Rs. 12,718 for the same period of 1886 ; and the working expenses were Rs. 6,177 against Rs. 6,499, leaving a net revenue of Rs. 6,046 against Rs. 6,219. The amount of Rs. 814 required to make the dividend up to 5 per cent. per annum has been made good by the Managing Agents.

Sales are reported of Calcutta Landing and Shipping 68 and 70 ; Calcutta Steam 113 and 114 ; Contributory 12 p. m. ; Darjeeling Railway 110½ ; India General 92 and 91 ; Tarkessur 116.

Tea.—New Mutual Tea Company.—The report of the Managing Agents discloses a profit of Rs. 22,425 for season 1887, equal to 19 2-5 per cent., on the capital, and with the sum brought forward from 1886, the amount at credit of profit and loss is Rs. 22,838, from which it is proposed to pay a sterling dividend of 7s. 6d. per share of Rs. 30. Shareholders desirous of receiving the dividend in rupees can do so on giving notice to the Managing Agents, by which means they escape income-tax.

The outturn for the year was 4,021 maunds against 3,899 maunds in 1886, and 3,320 maunds in 1885. The Revenue Account shows receipts Rs. 1,87,482 and expenditure Rs. 1,65,057.

The estimates for 1888 are for a crop of 4,782 maunds at an outlay of Rs. 1,72,723. The area of the gardens under plant is 1,406 acres.

Tezpur Company.—The report of the directors discloses a profit on the season's working of Rs. 73,935, and an available balance at profit and loss of Rs. 73,097. An ad interim dividend of 5 per cent. has exhausted Rs. 36,715, and it is now proposed to declare a final dividend of 4½ per cent. and to carry forward Rs. 3,339. The outturn was 270,713 lbs., or some 116 maunds short of the estimate, owing to mosquito blight, but it realised the satisfactory gross average of As. 12-3½ per lb., as against As. 10-0½ last year. The estimates for 1888 are for an outturn of 280,000 lbs., tea at an expenditure of Rs. 1,18,000. A small extension of 20 acres will be put in hand during this year, the present area under plant being 1,013 acres.

Dessai and Parbuttia Company.—The report of the directors shows that the yield of tea during 1887 was 152,000 lbs. against an estimate of 152,800 lbs. and a crop in 1886 of 136,226 lbs. The tea was sold in Calcutta and averaged As. 10-5 3-5 per lb. against As. 9-3 16-25 in 1886. The Revenue Account shows a profit of Rs. 17,721, and adding the balance from 1886, the amount at credit of profit and loss is Rs. 18,346. An ad interim dividend of 5 per cent. has already been paid, exhausting Rs. 9,000, and it is now proposed to pay a final dividend of 3 per cent. and to carry Rs. 3,946 forward. The estimates for 1888 are for 164,000 lbs. at a cost in Assam at As. 6-1 per lb., which contrasts favourably with previous years. The area under cultivation is 572 acres.

Ellenbarrie Tea Company.—The report of the managing agents discloses a net profit of Rs. 21,012, and adding the balance from 1886, the amount at credit of profit and loss totals up Rs. 24,825. An ad interim dividend of 5 per cent. has already been declared, and it is now proposed to pay a final dividend of 10 per cent. ; making 15 per cent. for the year, and to carry Rs. 2,325 forward. The outturn was 1,892 maunds against an estimate of 1,800 maunds, and nearly all the tea was sold in London, the net average price being As. 9½ against As. 7 last year. The estimate for the current year is for 2,100 maunds at an expenditure of Rs. 64,921, and the total area under plant is now 408 acres, while 38 acres will be cleared this year.

Amluckie Tea Company.—The report of the managing agents shows that the outturn was only 2,615¼ maunds against an estimate of 3,000 maunds, consequent on deficient rain fall ; but the quality made up for the quantity, the average gross being 11 annas per pound. The accounts show a profit of Rs. 14,651, and with the balance from last year, the sum of Rs. 68,263 at credit of profit and loss. An ad interim dividend of 5 per cent. has exhausted Rs. 22,285, and the Managing Agents recommend a final dividend of 3 per cent., making 8 per cent. for the season ; that Rs. 6,000 be taken to Reserve Account and Rs. 26,807 be carried forward.

The estimate for the current season is for a crop of 3,000 maunds at an expenditure of Rs. 99,129 which includes some machinery and an engine.

Mim Tea Company.—The report of the agents for the year 1887 discloses a profit of Rs. 19,466, and a credit balance at profit and loss of Rs. 20, 536. An ad interim dividend of 5 per cent. was paid in November, and it is now proposed to pay a final dividend of 7 per cent., making 12 per cent. for the year, and carry Rs. 1,456 forward. The outturn for 1887 was 123,643 lbs. against an estimate of 114,400lbs. and an outturn in 1886 of 112,661 lbs. The gross average price realised was 10¾*d.* per lb. or barely 9 annas, against 11¼*d.* per lb. last year. The estimates for the current season are for a crop of 124,000 lbs. tea at a cost of Rs. 52,100 ; the expenditure last season was Rs. 46,205. The area of the gardens is 385 acres.

Eastern Cachar Tea Company.—The report of the directors shows that the outturn was 4,946 maunds, against an estimate of 3,140 maunds and a crop in 1886 of 4,835 maunds. Some of the gardens were badly cut up with hail in the early part of the season which accounts for the deficiency. The average price realised was As. 7-9 against As. 7-5 last year. The area of the gardens is 1,486 acres. The receipts amounted to Rs. 1,93,314 and the expenditure to Rs. 1,64,417, leaving a profit of Rs. 28,897. A sum of Rs. 20,000 was transferred from last year's profit and loss account to block, and after payment of the debenture interest, the amount at credit of profit and loss is Rs. 37,219. It is proposed to write off Rs. 29,607 from block, machinery, &c., and to carry Rs. 7,683 forward. The estimates for 1888 are for a crop of 5,500 maunds at an expenditure of Rs. 1,72,394. The capital of the company is seven lakhs.

Buchola Tea Company.—The report of the managing agents discloses a balance at credit of profit and loss of Rs. 5,972 which includes a small balance of Rs. 75 from last year ; a dividend of 2 per cent. is recommended, carrying forward Rs. 572. The outturn for the year was 1,537 maunds against an estimate of 1,450 maunds and a crop of 1,589 maunds in 1886. The gross average price realised was As. 8-2 against As. 7 last season. The estimates for this season are for 1,500 maunds tea at an expenditure of Rs. 52,680. Prospects generally are favourable.

Kamptie Gwallie Tea Company.—The report of the managing agents discloses a profit on the Revenue Account of Rs. 17,039, and after providing for the commissions of the management and certain debit balances, a net credit at profit and loss of Rs. 11,506 will admit of a dividend of 5 per cent., carrying Rs. 506 forward. The outturn for the season was 2,535 maunds, against an estimate of 2,000 maunds and a crop in 1886 of 1,920 maunds. The net average price obtained was As. 7·91 per lb, against As. 8·17 last year. The estimate for 1888 is for 2,500 maunds at a garden outlay of Rs. 50,000.

Kunchunpore Tea Company.—The report of the directors discloses a loss of Rs. 4,544 and a debit balance at profit and loss of Rs. 20,975. The crop was estimated at 1,000,000lbs., but the actual yield was 85,770 lbs. ; similarly last year the estimate was the same, but the crop fell to 94,100 lbs. and the loss on the working was Rs. 6,895. The reduced outturn this year was caused by a fire, which destroyed the machinery just when it was most wanted. The whole crop averaged As. 7-8½ per lb. against about As. 7-5 last year. The estimate for this season is again for an outturn of 100,000 lbs. at an expenditure of Rs. 48,000. The balance sheet shows an indebtedness of Rs. 22,338 and the available assets are Rs. 5,184. The capital is Rs. 4,56,000.

Runga Matlee Tea Company.—The report of the managing agents discloses a profit on the season's working of Rs. 6,950 and with the balance from 1886 a credit at profit and loss of Rs. 7,906. A dividend of 2 per cent. will exhaust Rs. 7,000, the manager's commission Rs. 395, leaving Rs. 511 to be carried forward. The outturn was below estimate at 2,000 maunds, but owing to the prevalence of red-spider and mosquito blight, the crop fell to 1,703 maunds, and the net average price realised was As. 5-11 against As. 5-6 in 1886. The area under plant is 355 acres, and it is proposed to open out 100 acres during the present season. The estimates for 1888 are for 1,600 maunds fine tea at an outlay of Rs. 53,651. The report is singularly full of information for the shareholders, as indeed Messrs. Duncan Brothers & Co's reports always are.

Loobah Tea Company.—The report of the directors discloses a profit on the season's operations of Rs. 83,912 and adding the balance from 1886, the amount at credit of profit and loss is Rs. 85,218. An ad interim dividend of 5 per cent. was paid in December, and it is now proposed to pay a final dividend of 7½ per cent. making 12½ per cent. for the year ; to write Rs. 17,116 off extension, factory and machinery accounts, and to carry Rs. 5,402 forward. The outturn for the season was 6,056 maunds against 5,940 maunds estimated, and a crop in 1886 of 5,284 maunds. The average price realised for the crop, which was all sold in Calcutta, was As. 9-4 per lb. The estimates for 1888 are for 6,341 maunds at an outlay of Rs. 1,96,671. The area under plant is 1,592 acres, and an extension of 80 acres is contemplated this season. The capital is 5 lakhs.

Hoolmaree Tea Company.—The report of the directors discloses a profit for the past season of Rs. 19,795, and adding the balance from 1886, a credit at profit and loss of Rs. 23,025. An ad interim dividends of 10 per cent. have exhausted Rs. 12,000, and it is now proposed to pay a final dividend of 5 per cent., making 15 per cent. for the year, and to carry Rs. 5,025 forward. The outturn for the year was 110,940 lbs. against an estimate of 108,000 lbs., and a crop in 1886 of 113,210 lbs ; and the gross average price realised was As. 11-6 against As. 10-10 for crop of 1886. The estimates for 1888 provide for a crop of 108,000 lbs., at an outlay of Rs. 55,700. The area under plant is 313 acres. The block account stands at one lakh.

Adulpore Terai Company.—The report of the managing agents discloses a profit of Rs. 2,990, and a credit at profit and loss of Rs. 1,042. Owing to severe blight the crop only yielded 54,740 lbs. against an estimate of 60,000lbs. and an outturn in 1886 of 54,690lbs. The gross revenue was Rs. 28,896. The estimates for 1888 are for a crop of 800 maunds at a local cost of Rs. 20,000, which includes the upkeep of the whole garden. The area under plant is 192 acres, of which 77 are not yet in full bearing. The capital is Rs. 1,10,000, and the block account stands at Rs. 1,27,735.

Sales are reported of Dehing 41½, 42 ; Bishnath Contributory 90 ; East India 35 ; Amluckie 60. The Weshabarie Company has declared a dividend of 5 per cent ; making 10 per cent. for the season. Meetings to declare dividends are advertised of the Dehing, East India, Goomtee and Mothola Companies.

At the London tea sales this week 23,000 packages were offered and 20,800 sold. There was a good demand with an upward tendency.—*Pioneer.*

Domestic Occurrences.

BIRTHS

ANDERSON—At Calcutta, the wife of H. H. Anderson, Rector St. James's School, of a son.
BARRY—Feb. 11th, at Colaba, Bombay, the wife of Surgeon J. D. Collis Barry, Bombay Medical Service, of a son.
BARTON—Mar. 12th, at Jubulpur, the wife of Mr. Cecil M. Barton, of a daughter.
BULKELEY—Mar. 9th, at Lucknow, the wife of Lieutenant G. A. Bulkley, The Leicester Regiment, of a son.
CLIFFORD—Mar. 15th, at Poona, the wife of Mr. W. J. Clifford, Quarter-Master General's Department, of a son.
FAWCETT—Mar. 13th, at Bangalore, the wife of F. Fawcett, of a son.
FRANCKE—Mar. 19th, at Parli Hill, the wife of A. Francke, of a daughter.
GRAHAM—Mar. 8th, at Fyzabad, the wife of E. Graham, of a son.
HAM—Feb. 27th, at Simla, the wife of W. J. Ham, Assistant Director-General, P. O. (prematurely),

The following are our usual weekly statistics :—

Do.	for the Week ending	do.	61,329	40,694

WHEAT.—For the time of year the transactions reported are on a very small scale. Supplies of new grain have been coming in more freely, but the quantity available is exceedingly small, and for both early and forward delivery holders continue firm. Crop prospects are excellent, and the yield in the Central Provinces, from whence the bulk of our supplies is received, promises to be very large. Unless, therefore, rates in Europe improve ours must give way, especially as freights are stiffening up.

SEEDS.—There is very little doing. Linseed is easier, Rape firmer, Gingelly in moderate enquiry. Poppy dearer, as also Groundnuts.

The following are about closing quotations :—

Linseed	17,714 "
Rapeseed	2,754 "
Gingelly Seed	3,791 "

IMPORTS.

PIECE-GOODS.—This market continues very stagnant in all branches. The demand from up-country has practically ceased for the time being, and this added to the fall in Exchange has simply stopped business for the present. Local Yarns are quiet but steady with only a limited export demand.

COALS.—At the commencement of the week Coals were quiet, but a demand suddenly sprang up for April shipment. In one day nearly 8,000 tons of Davisons were placed at Rs. 19 per ton. Sellers now ask more. For ready Cardiff sellers ask Rs. 21 ready, whilst for forward delivery half a rupee per ton less would be accepted.

METALS.—The difference in price between Indian and English prices still continues so great that fresh business is impossible. A few purchases of Copper by local firms are reported at our quotations, and there is a good demand for Yellow Metal from Calcutta, where it is going from here. The makers of Yellow Metal are reported to have joined the syndicate at home, which means artificial prices for a long time, we suppose. We quote :—

	Per ton. Harbour terms.	Per cwt. Bazaar terms.
Copper	£89	Rs. 5 4 to 5 8
Yellow Metal	£36½	Rs. 4 4 to 4 8
Muntz do.	£38	Rs. 43

MONEY, EXCHANGE, SHARES, &c.

MONEY.—The demand for money has not in the least improved since last week. Monday's statement of the Bank balance showed an increase in cash of 13½ lakhs in spite of an increase of business in Loans and Discounts. The Bank of Bengal to-day has increased 18 lakhs, so that there is a greater supply than demand at the moment both in Bombay and Calcutta.

The statement of the Bank of Bombay for the week ending on Saturday, the 17th March, compares thus with that of the previous week :—

LIABILITIES.	Amount.	Increase.	Decrease.
	£	£	£
Public Deposits at Head Office and Branches	99,57,478	2,79,258	..
Other Deposits	3,01,32,870	13,22,607	2,308
Post Bills	11,128	..	..
Cash Credits and drawn	10,36,508	21,297	..

Cash Credits on Security of Govt. Paper, Bullion, and Merchandize	45,65,104	..	3,02,615
Loans on Security of do. do.	29,3 .031	3,16,863	.. 761
Current Accounts overdrawn	2,464	3,11,573	..
Bills discounted	2,32,01,009	..	.. 1,000
Bullion	1,33,8 0	..	3,29,224
Cash Balances with Correspon. Banks	6,34,372	..	..
Cash and Currency Notes	1,15,54,844	15,57,400	..

EXCHANGE.—The market to-day has dropped to the lowest point again. Three months' Credits have been placed at 1s. 4⅜d., March-April, and 1s. 4 19-32d., May-June. Demand Bank Paper was done to a small extent at 1s. 4 17-32d. for the mail, but subsequently 1s. 4⅜d. was the best rate obtainable for March-April and May, 1-32 less for June, and 1-32 less again for July. The market closes quiet. It is reported that one of the Exchange Banks did business yesterday when all Banks were advertised as closed on account of a native holiday. This is not the first time that we have had to draw attention to this procedure, and if it is persisted in, holidays will become only holidays in name. There cannot be two opinions as to such transactions. We quote :—

	Demand.	3 months' sight.	4 months' sight.	6 months' sight.

GOVERNMENT PAPER.—The tone of the market has been steady during the week, and a pretty good business in Government securities is reported to have taken place at prices nearly on a level with those ruling at the time we gave our last report. On Saturday, a few transactions in 4 per cent. were reported at 98⅜ and also at 98½ for the end of the month. At the close there were a few sellers at the rate last quoted. On Monday, the market was closed in sympathy with Mr. Nusserwanjee Maneckjee Petit for the sad and untimely death of his son, Mr. Jamsetjee Nusserwanjee Petit. On Tuesday the market opened firm for Fours. A pretty good business for the end of the month was done in the morning at 99, and subsequently at 98⅜. At the close the feeling was good both for ready as well as forward paper. On Wednesday the Banks and the market were closed on account of the Jamshedi Naoroz festival, a Parsee holiday. To-day the feeling for paper was rather strong. Business in 4 per cent. for the end of March was reported at 99 and 98 15-16, and for the end of April at 98 11-16. At the close there were a few sellers at 99 and 98 11-16 for the end of March and the end of April, respectively. Small clean pieces of 4 per cent. were sold nearly at the same rate as big amounts. About ten lakhs of paper, including ready and forward, were placed during the week. Money may be called comparatively easy, and though the official minimum rate of the Presidency Bank still stands at 7 per cent., money in the open market can easily be obtained on much cheaper terms, namely, at 3½ per cent. to 4 per cent. on the security of paper and other similar securities, and at 6 per cent. to 7 per cent. on the security of good shares for short periods. It is generally believed that the demand for money will increase some time next month, when the Bank's rates for accommodation may rise higher. Ready paper is rather scarce, and this affords great encouragement to speculators to carry on their rigging operations. One thing is certain, and that is that most of them are not in a position to take up the paper on the due date. Some of them have already begun to sell quietly, and others are awaiting a favourable opportunity, which may or may not come. As it is, there are few genuine buyers of ready or forward paper in the market, as the present rates are considered absurdly high seeing that a new loan is inevitable. The Budget will probably be published on or about the 25th of this month, and this will in a great measure decide the future of paper. Closing quotations are 98 15-16 for 4 per cent. and 105½ for 4½ per cent., the last being only nominal. Port Trust Bonds are steady at 93¼. Five per cent. Municipal Sanitary Works Loans, as also the Tansa Scheme Loans, have been in slight request and have improved to 104¼. A small lot of these loans was placed at 104. Six per cent. Municipal Loans are unchanged at 101.

SHARES.—The Share market may be called quiet but steady during the present week. Bank of Bombay shares have further advanced about one per cent. They close firm at Rs. 805. We have nothing new to report in the shares of the Exchange Banks, which continue to be steady at previous quotations, except in the case of the National Bank and the New Oriental Bank sterling bearer shares, which have been in demand, and have improved to Rs. 125 and Rs. 155 respectively, at which they close very firm. Colaba Land and Mill shares are steady at Rs. 755. Port Cannings have receded to Rs 335. Press shares have been quiet but steady with the exception of New Berars, Volkarts and Mofussils, which have given way about Rs. 5, Rs 10 and Rs. 2½ respectively. A few transactions were reported in New Berars at Rs. 590, in New Indians at Rs. 90, in Munmars at Rs. 195, in Prince of Wales at Rs. 290, and in Mofussils at Rs. 492½ and Rs. 495. Mill shares have been weak and have declined about Rs. 5 in some cases. Business was reported in Alliance at Rs. 595 and Rs. 600, in Anglo-Indians at Rs. 100, in Central India at Rs. 1,040, in Coorlas at Rs. 575 ex-dividend, in Framji Petits at Rs. 610, in Jewraj Balloos at Rs. 1,120, in Khataos at Rs. 1,272½, in Mazagons at Rs. 160, in New Great Easterns at Rs. 740, and in Orientals at Rs. 527½ Empress, James Greaves, Leopolds, and Rs. 530. and Connaughts have been steady at Rs. 725, Rs. 635, Rs. 144 and Rs. 630, respectively. Amongst the New Mills, the Howard and Bullough shares are unchanged at Rs. 655. The Queen Mills have declined to Rs. 950 ex-dividend. The City of Bombay shares have been steady at Rs. 910 ex-dividend. The Ripon Mill shares have receded to Rs. 940. The Southern Mahratta Mill shares have been in request at Rs. 265. A good lot of Lukhmidas Mill shares was placed at Rs. 885, at which they close quiet. The Swadeshi Mill shares are unchanged at Rs. 480. Forward business for April delivery in some of these shares was done at an advance of about Rs. 5 over current cash quotations. At the close the feeling, especially for such mills as are dealt in for purposes of speculation, was weak, the speculators having sold a good many held by them. The mills are still working at a good margin for profit. The price of yarn has somewhat improved, and the price of Cotton continues to be cheap and favourable to the mill industry. In miscellaneous companies, Bombay-Burmah Trading shares have improved about Rs. 75. They close firm at Rs. 2,875. The New shares have advanced to Rs. 725. Badhan, Pile and Co. shares have improved to Rs. 157. Bombay Ice Co. shares are steady at Rs. 93. Cooper, Madon and Co. shares are quiet at Rs. 68, Kemp and Co. shares are in demand at Rs. 360. Marcks and Co. shares have improved to Rs. 96, at which they close firm. Phillips and Co. shares have been in strong request and have improved to Rs. 114, without any business to speak of passing in them. Treacher and Co. shares are in slight demand at Rs. 1,280. Amongst the flour mills, the Bombay Flour Mill shares have been weak and neglected at Rs. 490. The Royal Flour Mill shares are quiet at Rs. 50. Bapty Brothers and Co. Flour Mills have declined to Rs. 50. The Western India Flour Mills have receded to Rs. 40. The Delhi and Northern India Flour Mills have given way about Rs. 5, and close weak at Rs. 215. It may here be mentioned that most of these flour mills are now quoted far below their intrinsic value.

Rate for Demand Loans on the security to Government Paper is now 7 per cent. per annum. Rates for other business subject of arrangement.

TELESCOPIC RIFLE SIGHTS.

JEFFERY'S PATENT TELESCOPIC RIFLE SIGHTS can be fitted to any ordinary Single or Double Barrel Rifle by any intelligent workman. They can be instantly fixed or detached by the sportsman, and do not interfere with the ordinary Rifle Sights. Telescopic Sights are of enormous advantage to Sportsmen, and also for Military purposes. By using them the Sportsman is enabled to search out and accurately aim at game lying partially concealed in jungle or underwood. An ordinary marksman with these Sights on his Rifle can easily excel the highest patterns that have been made with Rifles fitted with the usual pattern Sights. All difficulties in aiming are overcome, such as blur on the Sights, slight defects in eyesight, &c. The distance appears reduced, when looking through the Telescopic Sights, to one-sixth, thus an object at 600 yards is seen as clearly and distinctly as if it was only about 80 yards distant.

Prices:

No. 1 PATTERN TELESCOPE SIGHT, with Ordinary Pattern Focus Drawn, Range from 50 to 500 yards, £3 10s.
No. 2 DO., DO., DO., with Rack and Pinion or Patent Screw Focus Adjuster, Range 50 to 1,000 Yards (these Sights may be obtained through and fitted by any Gunmaker in India), £4 10s.
SINGLE BARREL, NON-REPEATING WINCHESTER RIFLE, .450 Express Bore, with Patent Telescopic Sights, fitted complete, £35 0s. Also same Price Small Bore Rifle.

Patterns and Self-Measurement Forms sent per return of Post to any part of India.

EXTRACT FROM "THE COLONIES AND INDIA," May 2, 1884.

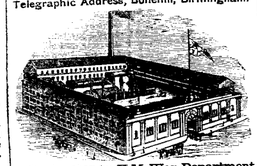

"RECOURSE to amputation is, it may confidently be believed, seldom, if ever, urged nowadays by the surgeon till every other remedial measure has been exhausted. Still, the dread of the knife is so keen, even among the bravest men, that its use is on all occasions regarded with something of distrust. Progress in medicine is, happily, yearly reducing the necessity of this extreme operation, and people are not without hope that it may soon be almost entirely abolished. In a number of cases in which amputation would have been necessary, the use of the knife appears to have been recently avoided merely by the use of a purely vegetable ointment. This compost tion distinguished as the 'Lion,' and prepared by Mr. E. BURGESS, of High Holborn, has won golden opinions from all sorts and conditions of men as a remedy for most Skin Diseases, old and poisoned wounds, cancers, tumours, ulcers, and other affections. Introduced to the public quietly, and without flourish of trumpets or bold advertisements, it has won wide popular favour, judging from a long list of testimonials now before me, by sheer force of its wonderful curative virtues. Instances innumerable are forthcoming of the almost magical disappearance of diseases of the character I have indicated upon the application of this ointment, and in cases, too, where the treatment of celebrated specialists had entirely failed. To residents in the up-country districts of the colonies where, under any circumstances, medical aid can only be secured with difficulty, the possession of such an ointment is of the highest value and importance, while the fact that it is a well-approved remedy for stings and venomous bites must strongly commend it to such of my readers as dwell in India and the tropics." Of all Chemists.

E. BURGESS' LION OINTMENT AND PILLS, HIGH HOLBORN, LONDON

Established 1851.
Telegraphic Address, Bonehill, Birmingham.

The Belmont Interchangeable Machine-made Guns have been introduced to meet the requirements of those who desire a thoroughly reliable and well-finished Gun at a moderate price. They are unexcelled for solidity of mechanism, elegance of design, and high class shooting properties. They are built in Four Grades, and each Gun is *Triplex-bolted* and *truly Circular-jointed*. They have met with enormous success, and are acknowledged to be the Best and Cheapest Guns in the World. The prices average about half the cost of a similar quality hand-made gun.

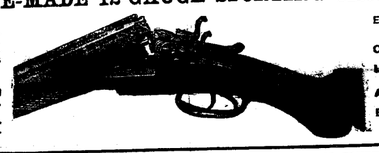

Contractor to H.M. War Department for the Supply of Interchangeable Small Arms, Barrels, and Implements.

Steel Barrels can be had in lieu of Twist or Damascus if desired, without extra charge. The Steel I use is of a special brand, *solely manufactured* for me from a private specification, obtained after a lengthened series of experiments. The Steel, which is branded "Bonehill's Special Steel," and marked with three Bells, has proved itself to be eminently suitable for best Gun Barrels. All Guns are subjected to a most rigid view before they are permitted to leave the factory.

THE BELMONT INTERCHANGEABLE
MACHINE-MADE 12-GAUGE SPORTING SHOT GUNS.

GRADE A.
Sound and Serviceable. Twist Barrels, £5 10s. Complete Set of Implements, and Canvas Gun Case, £1 5s.

Brick partitions between Rooms carried to ceiling.
Steam Launch to land and embark Passengers.
English-made Furniture, Iron-Bedsteads, Hair Mattresses.
Telephonic Communication with all Local Offices.
ELEPHANTA CAVES:—The Hotel Steam Launch runs to the Island.

The above Hotel, which has lately changed hands, is to be thoroughly renovated and every Bedroom in the house fitted with a private Bathroom of its own. Owing to the great demand for accommodation on the first floor, it is proposed to convert the present Dining Room into Bedrooms. The existing Billiard Room is to be turned into a Dining Room to accommodate about 200 people, and a smaller Dining Room provided near for Private Parties, Meetings, &c., and Messrs. WATSON & Co.'s shop changed into Billiard, Smoking, Drawing, Music and Ladies' Rooms. Arrangements are also made to have a Luggage Lift and the whole house thoroughly repainted and decorated. The proposed alterations, which are being carried out under the personal superintendence of Mr. B. F. Chisholm, coupled with the splendid position of the Hotel, will probably keep this well known house full during the year.

The management take this opportunity of contradicting a malicious rumour to the effect that the Hotel has been closed The Hotel, one of the oldest in Bombay, has never at any time been closed to the Public, and the extensive alterations are being carried out without any inconvenience to Visitors.
